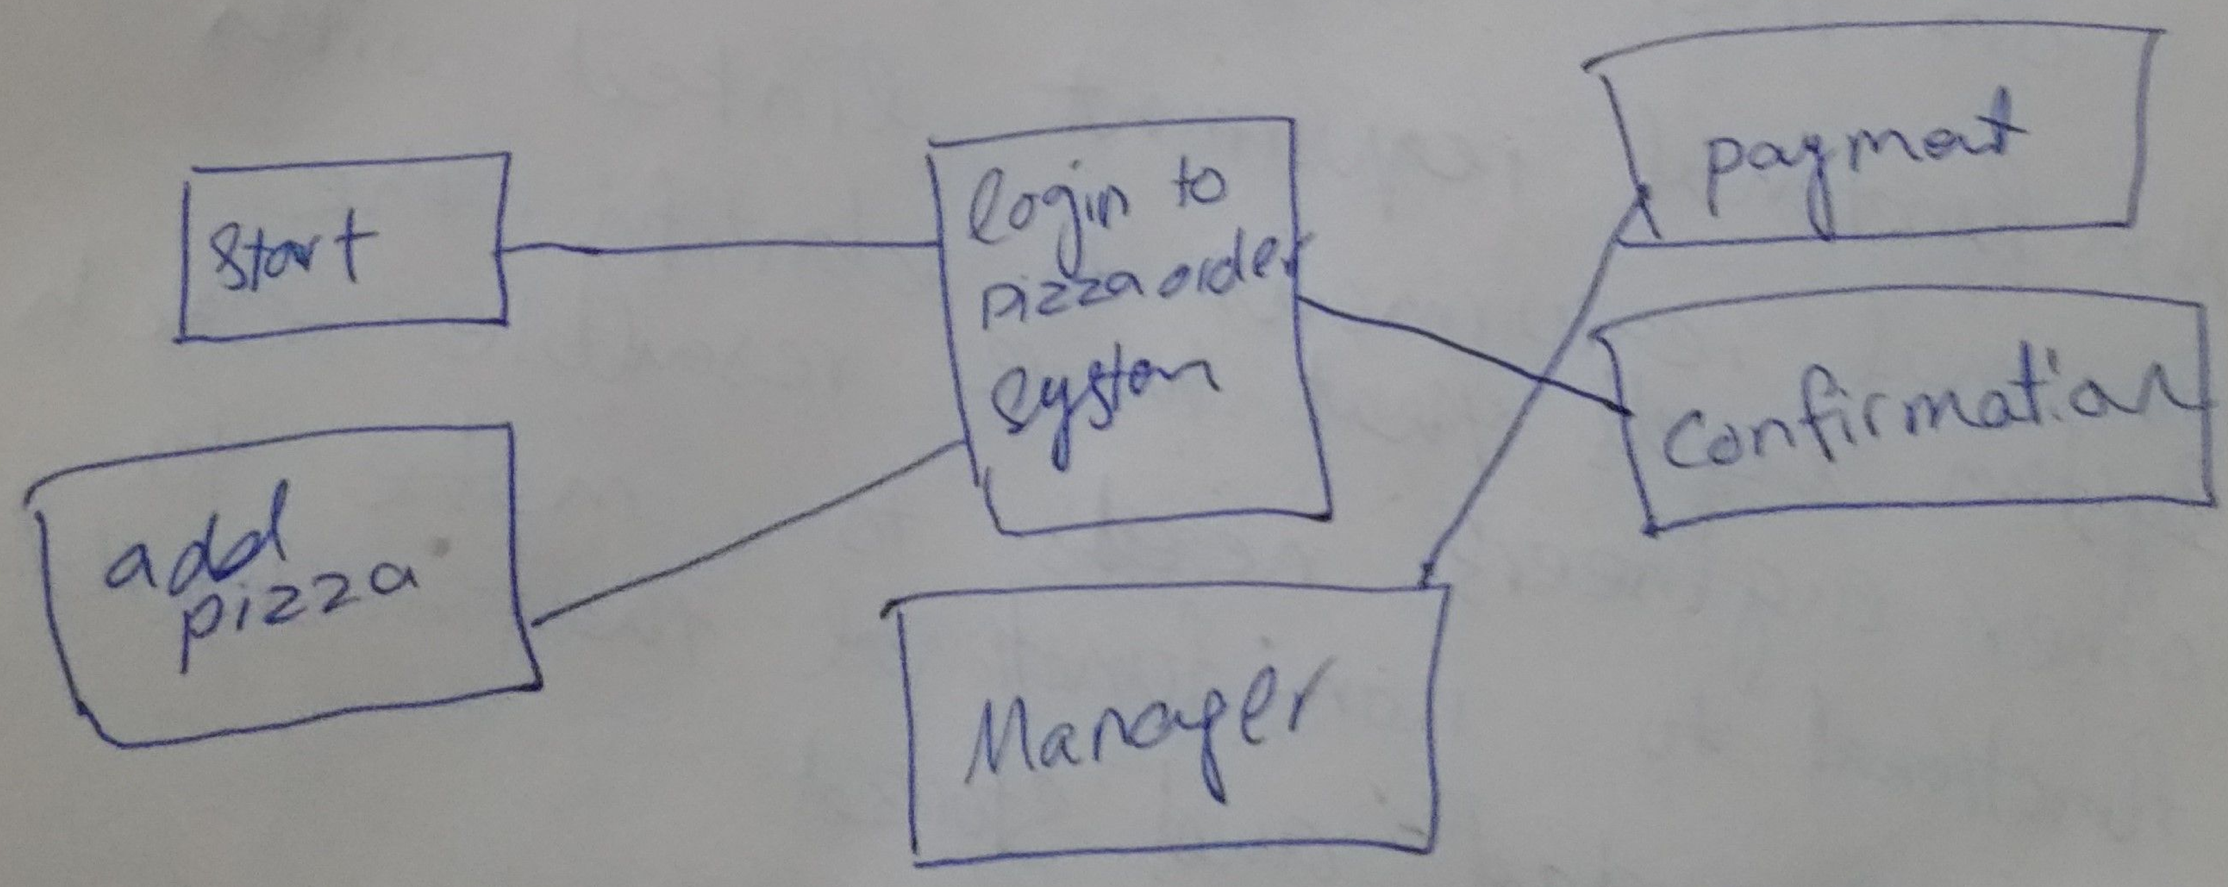
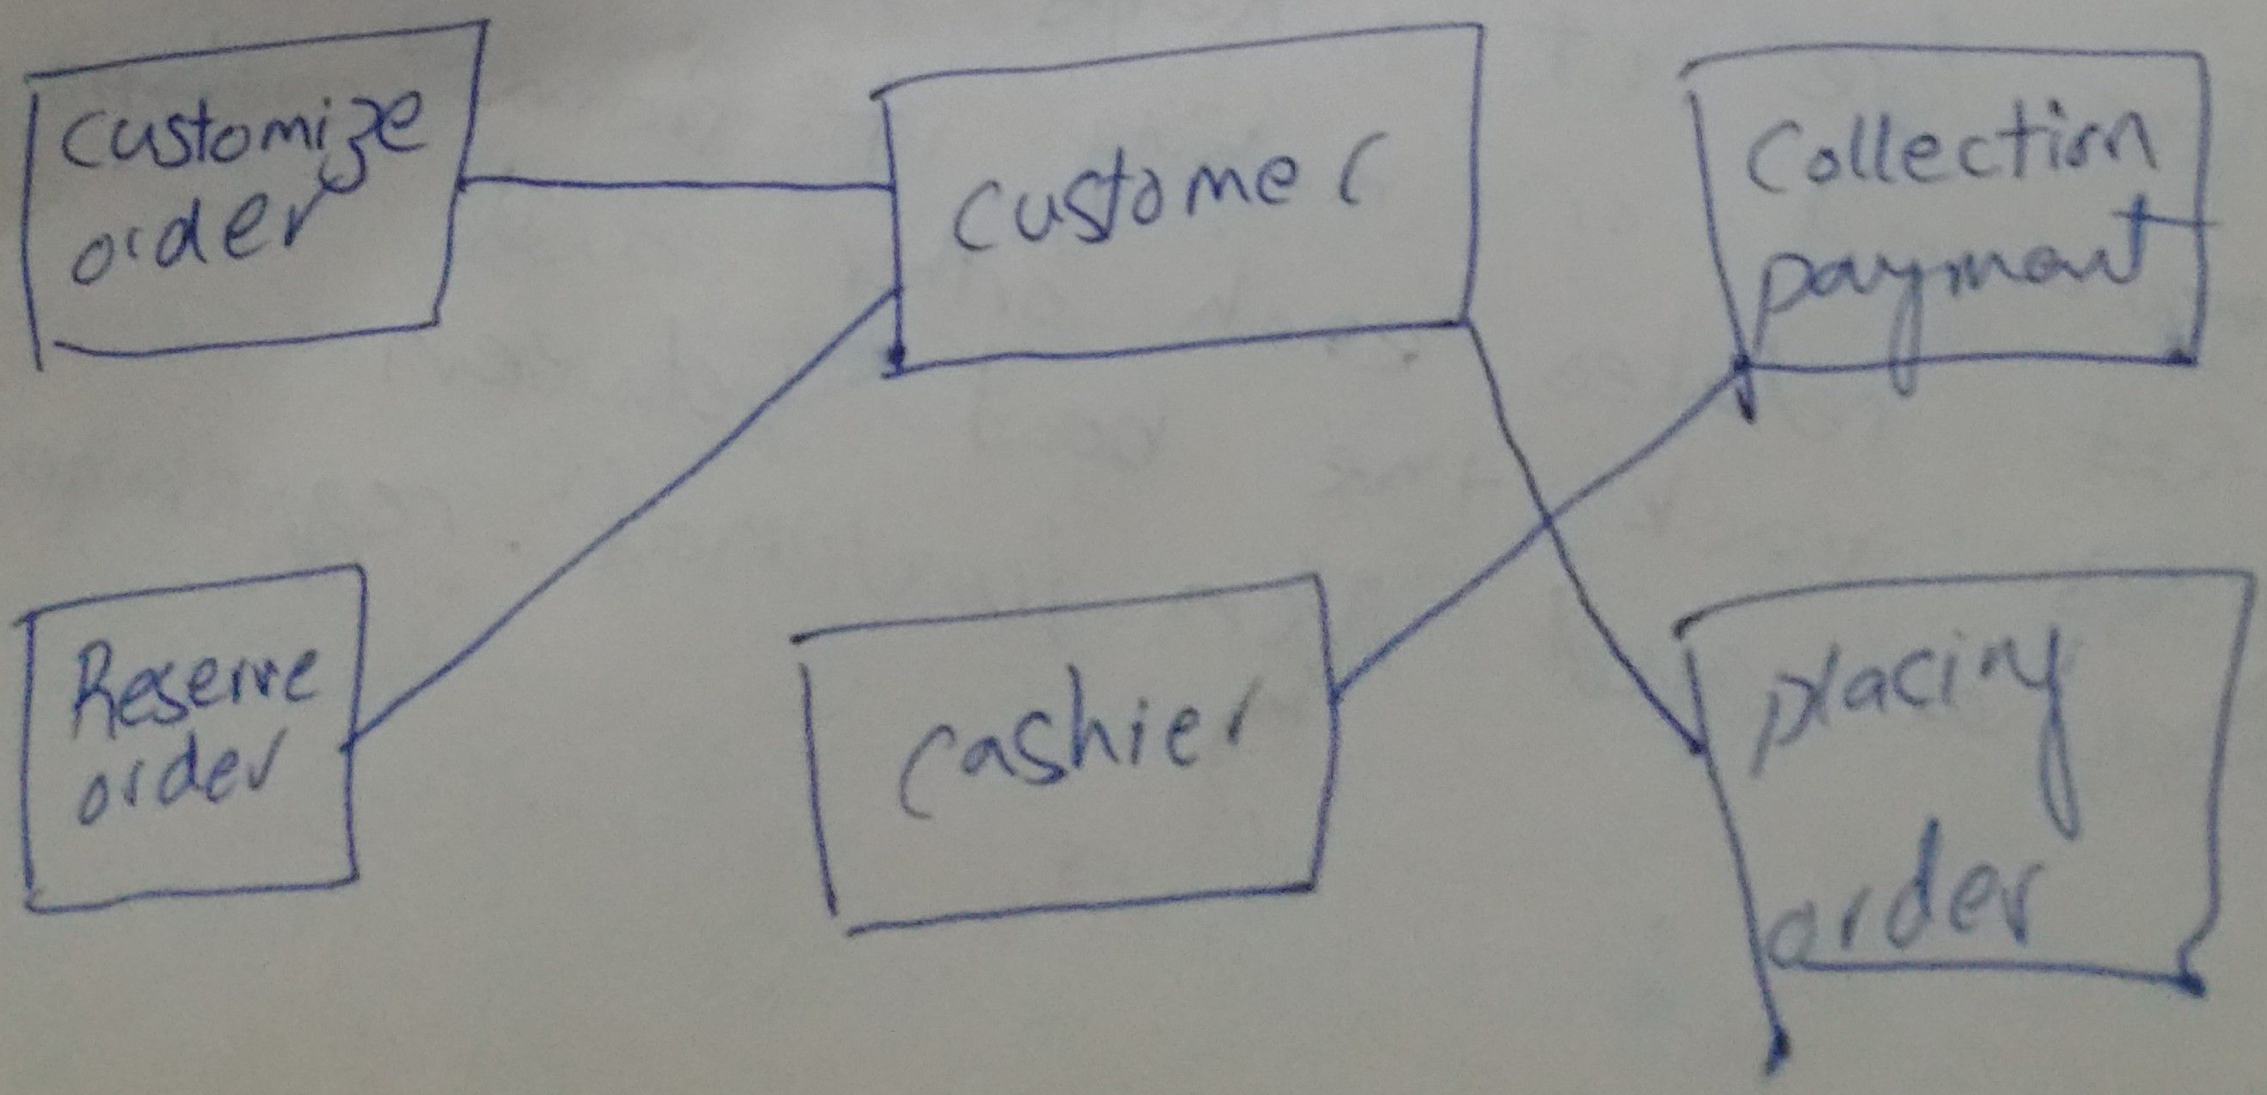
Pizza order system allow the user at every browser to order special Pizza for desiving place on order to find items to purchase ads when all items have decided to providers does delivery on same odds given by costomers. If not paying by cash, Providers also priviids cidit/debit card information





Q2

Page 1

- Requirement needed to design meets the requirment at customer
- That type at system should be design which have Privacy / security
- Imposing the system in efficent way
- cost and time required for development should not effect the design and Implementation at system

It is very difficult to mange because the functional and non funtional requirment puts effort with each other on track relationship

Non functional requirment linked with functional requirment to identify the System levels that have resonble each other engineer's needs to make to functional to non-functional that should be Recorded and stored

There fore it helps the engineers to ~~avoo~~ avoid or making it from overlaping that relates each other and it keeps track the bond between functional and Non functional requirment

Q3/1

Page 1

It is comply to introduce agile methods into more numbers at companies for fillowing Reasons.

(i) Project manager who have not experiance at agile methods may be reluctant to accept the risks at new methods as they donot know how this happen

(ii) large organization often have Quality producers and standards that all the Project are expected to follow because at there nature these are mostly Incompatible with agile methode people with lower skill level may not be effective team members in agile Processes

(iii) Agile methods locks to work best when team members have a relativeny high skill level. with large organizations are likely to bel a wide rang of skills and Abilities

Q5

Page 2

(iv) There may be cultural resistance to Agile methods, those setup, who have a long history of using conventional systems ~~organ~~ engineering processes This may conflict with test first and test often approches used in XP

Q4 page 1

if the person have no credit card the what would be the process at cash payment

- what if the person decides wrong way? so can he come back in options.

- is there any option for going back

- is there any sound detection for blind people
