Q1 what are the main feauture of intercranial fossa of the Skull?

Ans Main feauture
The interior cranial fossa is the most Shallow and Superior of the three Cranial fossa. It lies Superiorly over nasal and orbital cavites. fossa accomdaited interoinferior portion of the frontal bones. Consist of frontal ethmoid and sphenoid

It bounded
- Anteriorly
- posteriorly
- posteriorly and medially
- posterly and laterally

that runs alongside the tibia (fibula) and the kneecap (patella) are the other bones that make the knee Joint-

Q3 Write a note on salient feacture of normal frontail and norma occiptalis of skull?

Ans Normal frontalis:-
The most charatrstic feature of the Minatogawa Skull from frontal aspect are the around contour of the Skull- vault with its narrow forhead well developed supraorbits ridge flate and board face-

Norma occiptal:- is a cranial dermal bone and the main bone of the occiput back and lower part of skull. It is trapzoid in shaped-

It is region of the passage of the main blood vessels b/w the pelvis and lower limb as well as large nerve supplying the thigh.

Q4 What do you know about muscles of hip and knee?
Ans:-

⇒ Muscles of hip :- is a ball and socket joint formed by an articulation b/w the pelvic acetabulm and the head of femur- and it connected to lower limb of pelvic gridle and design for stabilaty and weight bearing.

⇒ Muscles of knee :→
The knee is one of the largest and most complex joint in body -the knee joint the tigh bone (femur) to the shin bones (tibia) - The smaller bone

Q2 write a note on the cranial nerves?

Ans Cranial nerves:- The cranial nerve are that emerge directly from the brain of which there are conventionally considerd twelve pairs. cranial nerves relay information Blw brain and parts of the body primarly and region of head and neck including special senses of vision taste smell and hearing and cranial are component of peripral-

Q5 Write a comprehensive note on femeroal tringle?

Ans:- **femoral triangle:-**

The femoral tringle are wedge shaped area formed by a depression b/w the muscles of the tight. it is located on the medial aspect of the proximal thight
