YOU THINK. YOU CAN WORK AT RMB

**RAND
MERCHANT
BANK**
A division of FirstRand Bank Limited
Traditional values. Innovative ideas.

Rand Merchant Bank uses good business to create a better world, which is one of the reasons that the country's top talent chooses to work at RMB. For more information visit us at www.rmb.co.za

Thinking that can change your world

Rand Merchant Bank is an Authorised Financial Services Provider

Foreword

IDC Technologies specializes in providing high quality state-of-the-art technical training workshops to engineers, scientists and technicians throughout the world. More than 50,000 engineers have attended IDC's workshops over the past 10 years. The tremendous success of the technical training workshops is based in part on the enormous investment IDC puts into constant review and updating of the workshops, an unwavering commitment to the highest quality standards and most importantly - enthusiastic, experienced IDC engineers who present the workshops and keep up-to-date with consultancy work.

The objective of this booklet is to provide today's engineer with useful technical information and as an aide-memoir when you need to refresh your memory.

Conversions and formulas that are important and useful to the engineer, scientist and technician, independent of discipline, are covered in this useful booklet.

Although IDC Technologies was founded in Western Australia many years ago, it now draws engineers from all countries. IDC Technologies currently has offices in Australia, Canada, Ireland, Malaysia, New Zealand, Singapore, South Africa, UK and USA.

We have produced this booklet so that you will have important formulas and conversion at your fingertips. Information at an advanced level on engineering and technical topics can be gained from attendance at one of IDC Technologies Practical Training Workshops. Held across the globe, these workshops will sharpen your skills in today's competitive engineering environment.

Other books in this series

INSTRUMENTATION Automation using PLCs, SCADA and Telemetry, Process Control and Data Acquisition

COMMUNICATIONS Data Communications, Industrial Networking, TCP/IP and Fiber Optics

ELECTRICAL Power Quality, Power Systems Protection and Substation Automation

ELECTRONICS Personal Computers, Digital Signal Processing and Analog/Digital Conversions

1 Definition and Abbreviations for Physical Quantities

| Symbol | Unit | Quantity |
|--------|----------|--------------------|
| m | meter | Length |
| kg | kilogram | Mass |
| s | second | Time |
| A | ampere | Electric current |
| K | kelvin | Thermodynamic temp |
| cd | candela | Luminous intensity |

| Quantity | Unit | Symbol | Equivalent |
|----------------------|--------|------------------------|---------------------------------|
| Plane angle | radian | rad | - |
| Force | newton | N | kg · m/s ² |
| Work, energy | heat | joule | J·N·m |
| Power | watt | W | J/s |
| Frequency | hertz | Hz | s ⁻¹ |
| Viscosity: kinematic | - | m ² /s | 10 c St (Centistoke) |
| Viscosity: Dynamic | - | Ns/m ² | 10 ³ cP (Centipoise) |
| Pressure | - | Pa or N/m ² | pascal, Pa |

| Symbol | Prefix | Factor by which unit is multiplied |
|--------|--------|------------------------------------|
| T | Tera | 10 ¹² |
| G | Giga | 10 ⁹ |
| M | Mega | 10 ⁶ |
| k | Kilo | 10 ³ |
| h | Hecto | 10 ² |
| da | Deca | 10 |
| d | Deci | 10 ⁻¹ |
| c | Centi | 10 ⁻² |
| m | Milli | 10 ⁻³ |
| μ | Micro | 10 ⁻⁶ |
| n | Nano | 10 ⁻⁹ |
| p | Pico | 10 ⁻¹² |

| Quantity | Electrical unit | Symbol | Derived unit |
|-------------------------|-----------------|------------------|--------------|
| Potential | Volt | V | W/A |
| Resistance | Ohm | Ω | V/A |
| Charge | Coulomb | C | A·s |
| Capacitance | Farad | F | A·s/V |
| Electric field strength | - | V/m | - |
| Electric flux density | - | C/m ² | - |

| Quantity | Magnetic unit | Symbol | Derived unit |
|-------------------------|---------------|--------|-----------------------------------|
| Magnetic flux | Weber | Wb | $V \cdot s = N \cdot m / A$ |
| Inductance | Henry | H | $V \cdot s / A = N \cdot m / A^2$ |
| Magnetic field strength | - | A/m | - |
| Magnetic flux density | Tesla | T | $Wb / m^2 = (N) / (Am)$ |

2 Units of Physical Quantities

| Conversion Factors (general): |
|--|
| 1 acre = 43,560 square feet |
| 1 cubic foot = 7.5 gallons |
| 1 foot = 0.305 meters |
| 1 gallon = 3.79 liters |
| 1 gallon = 8.34 pounds |
| 1 grain per gallon = 17.1 mg/L |
| 1 horsepower = 0.746 kilowatts |
| 1 million gallons per day = 694 gallons per minute |
| 1 pound = 0.454 kilograms |
| 1 pound per square inch = 2.31 feet of water |
| Degrees Celsius = (Degrees Fahrenheit - 32) (5/9) |
| Degrees Fahrenheit = (Degrees Celsius) (9/5) + 32 |
| 1% = 10,000 mg/L |

| Name | To convert from | To | Multiply by | Divide by |

MSM

MAASTRICHT SCHOOL OF MANAGEMENT

Increase your impact with MSM Executive Education

For almost 60 years Maastricht School of Management has been enhancing the management capacity of professionals and organizations around the world through state-of-the-art management education.

Our broad range of Open Enrollment Executive Programs offers you a unique interactive, stimulating and multicultural learning experience.

Be prepared for tomorrow’s management challenges and apply today.

For more information, visit www.msm.nl or contact us at +31 43 38 70 808 or via admissions@msm.nl

**I WANT TO CHANGE DIRECTION,
AND THE WORLD.**

GOT-THE-ENERGY-TO-LEAD.COM

We believe that energy suppliers should be renewable, too. We are therefore looking for enthusiastic new colleagues with plenty of ideas who want to join RWE in changing the world. Visit us online to find out what we are offering and how we are working together to ensure the energy of the future.

RWE
The energy to lead

3 System of Units

The two most commonly used systems of units are as follows:

- SI
- Imperial

SI: The International System of Units (abbreviated “SI”) is a scientific method of expressing the magnitudes of physical quantities. This system was formerly called the meter-kilogram-second (MKS) system.

Imperial: A unit of measure for capacity officially adopted in the British Imperial System; British units are both dry and wet

Metric System

| | Exponent value | Numerical equivalent | Representation | Example |
|----------------------|----------------|----------------------|----------------|--------------------------|
| Tera | 10^{12} | 1000000000000 | T | Thz (Tera hertz) |
| Giga | 10^9 | 1000000000 | G | Ghz (Giga hertz) |
| Mega | 10^6 | 1000000 | M | Mhz (Mega hertz) |
| Unit quantity | 1 | 1 | | hz (hertz) F (Farads) |
| Micro | 10^{-6} | 0.001 | m | mF (Micro farads) |
| Nano | 10^{-9} | 0.000001 | n | nF (Nano farads) |
| Pico | 10^{-12} | 0.000000000001 | p | pF (Pico farads) |

Conversion Chart

4 General Mathematical Formulae

4.1 Algebra

A. Expansion Formulae

Square of summation

- $(x + y)^2 = x^2 + 2xy + y^2$

Square of difference

- $(x - y)^2 = x^2 - 2xy + y^2$

Difference of squares

- $x^2 - y^2 = (x + y)(x - y)$

Cube of summation

- $(x + y)^3 = x^3 + 3x^2y + 3xy^2 + y^3$

Summation of two cubes

- $x^3 + y^3 = (x + y)(x^2 - xy + y^2)$

Cube of difference

- $(x - y)^3 = x^3 - 3x^2y + 3xy^2 - y^3$

Difference of two cubes

- $x^3 - y^3 = (x - y)(x^2 + xy + y^2)$

B. Quadratic Equation

- If $ax^2 + bx + c = 0$,

Then $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$

The basic algebraic properties of real numbers a, b and c are:

| Property | Description |
|--------------|---|
| Closure | $a + b$ and ab are real numbers |
| Commutative | $a + b = b + a$, $ab = ba$ |
| Associative | $(a+b) + c = a + (b+c)$, $(ab)c = a(bc)$ |
| Distributive | $(a+b)c = ac+bc$ |
| Identity | $a+0 = 0+a = a$ |
| Inverse | $a + (-a) = 0$, $a(1/a) = 1$ |
| Cancellation | If $a+x=a+y$, then $x=y$ |
| Zero-factor | $a0 = 0a = 0$ |
| Negation | $-(-a) = a$, $(-a)b = a(-b) = -(ab)$, $(-a)(-b) = ab$ |

Algebraic Combinations

Factors with a common denominator can be expanded:

$$\frac{a + b}{c} = \frac{a}{c} + \frac{b}{c}$$

Fractions can be added by finding a common denominator:

$$\frac{a}{c} + \frac{b}{d} = \frac{ad + bc}{cd}$$

**Master of Science
in Management***

Source: 'Keuzegids Higher Education Masters 2011'.
*In category business administration and accountancy & controlling.

 **NYENRODE**
BUSINESS UNIVERSITEIT

www.nyenrode.nl

Products of fractions can be carried out directly:

$$\frac{a}{c} \times \frac{b}{d} = \frac{ab}{cd}$$

Quotients of fractions can be evaluated by inverting and multiplying:

$$\frac{a/b}{c/d} = \frac{a}{b} \times \frac{d}{c} = \frac{ad}{bc}$$

Radical Combinations

$$\sqrt[n]{ab} = \sqrt[n]{a} \sqrt[n]{b}$$

$$\sqrt[n]{a} = a^{1/n}$$

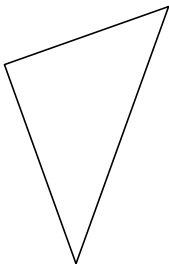

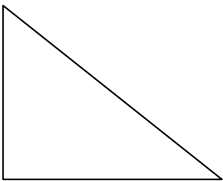

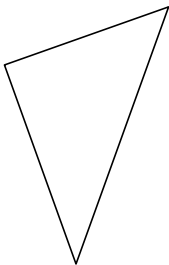

$$\sqrt[n]{\frac{a}{b}} = \frac{\sqrt[n]{a}}{\sqrt[n]{b}}$$

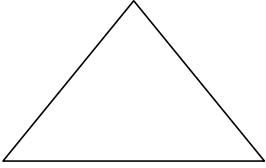

$$\sqrt[n]{a^m} = a^{\frac{m}{n}}$$

$$\sqrt[n]{\sqrt[m]{a}} = \sqrt[mn]{a}$$

Getting ahead in your management career

Our expertise in flexible and accessible education and your passion to succeed will enable you to get ahead.

A world-class research university, Leicester offers flexible, innovative courses because we understand that you've got other responsibilities. In fact, we're committed to making sure that everyone in our vibrant community gets the very best experience at Leicester, whether you're on campus or on the other side of the world.

Whether you choose to study one of our specialist Masters' courses, or our AMBA accredited MBA by full-time or distance learning, you will join a global network of similarly minded professionals and be supported all the way.

4.3 Trigonometry

A. Pythagoras' Law

$$c^2 = a^2 + b^2$$

B. Basic Ratios

- $\sin \theta = a/c$
- $\cos \theta = b/c$
- $\tan \theta = a/b$
- $\operatorname{Cosec} \theta = c/a$
- $\operatorname{Sec} \theta = c/b$
- $\operatorname{Cot} \theta = b/a$

Degrees versus Radians

- A circle in degree contains 360 degrees
- A circle in radians contains 2π radians

**Sine, Cosine and Tangent**

$$\sin \theta = \frac{\textit{opposite}}{\textit{hypotenuse}} \quad \cos \theta = \frac{\textit{adjacent}}{\textit{hypotenuse}} \quad \tan \theta = \frac{\textit{opposite}}{\textit{adjacent}}$$

Sine, Cosine and the Pythagorean Triangle

$$[\sin \theta]^2 + [\cos \theta]^2 = \sin^2 \theta + \cos^2 \theta = 1$$

Tangent, Secant and Co-Secant

$$\tan \theta = \frac{\sin \theta}{\cos \theta}$$

$$\sec \theta = \frac{1}{\cos \theta}$$

$$\csc \theta = \frac{1}{\sin \theta}$$

C. Trigonometric Function Values

Euler's Representation

$$e^{j\theta} = \cos(\theta) + j \sin(\theta)$$

$$e^{-j\theta} = \cos(\theta) - j \sin(\theta)$$

$$e^{jn\theta} = \cos(n\theta) + j \sin(n\theta)$$

$$\cos \theta = \frac{e^{j\theta} + e^{-j\theta}}{2}$$

$$\sin \theta = \frac{e^{j\theta} - e^{-j\theta}}{2j}$$

4.4 Logarithm

Definition

The **logarithm** of a number to a particular base is the **power (or index)** to which that **base** must be raised to obtain the number.

The number 8 written in **index form** as $8 = 2^3$

The equation can be rewritten in **logarithm form** as $\log_2 8 = 3$

Logarithm laws

The logarithm laws are obtained from the index laws and are:

- $\log_a x + \log_a y = \log_a xy$
- $\log_a x - \log_a y = \log_a (x/y)$
- $\log_a xy = y \log_a x$
- $\log_a (1/x) = -\log_a x$
- $\log_a 1 = 0$
- $\log_a a = 1$
- $a^{(\log_a x)} = x$

Note: It is not possible to have the logarithm of a negative number. All logarithms must have the same base.

Euler Relationship

The trigonometric functions are related to a complex exponential by the Euler relationship:

$$e^{jx} = \cos x + j \sin x$$

$$e^{-jx} = \cos x - j \sin x$$

From these relationships the trig functions can be expressed in terms of the complex exponential:

$$\cos x = \frac{e^{jx} + e^{-jx}}{2}$$

$$\sin x = \frac{e^{jx} - e^{-jx}}{2}$$

Hyperbolic Functions

The hyperbolic functions can be defined in terms of exponentials.

$$\text{Hyperbolic sine} = \sinh x = \frac{e^x - e^{-x}}{2}$$

$$\text{Hyperbolic cosine} = \cosh x = \frac{e^x + e^{-x}}{2}$$

$$\text{Hyperbolic tangent} = \tanh x = \frac{\sinh x}{\cosh x} = \frac{e^x - e^{-x}}{e^x + e^{-x}}$$

4.5 Exponents

Summary of the Laws of Exponents

Let c , d , r , and s be any real numbers.

| | |
|---------------------------------------|--|
| $c^r \cdot c^s = c^{r+s}$ | $(c \cdot d)^r = c^r \cdot d^r$ |
| $\frac{c^r}{c^s} = c^{r-s}, c \neq 0$ | $\left(\frac{c}{d}\right)^r = \frac{c^r}{d^r}, d \neq 0$ |
| $(c^r)^s = c^{r \cdot s}$ | $c^{-r} = \frac{1}{c^r}$ |

Basic Combinations

Since the raising of a number n to a power p may be defined as multiplying n times itself p times, it follows that

$$n^{p_1+p_2} = n^{p_1} n^{p_2}$$

The rule for raising a power to a power can also be deduced

$$(n^a)^b = n^{ab}$$

$$(ab)^n = a^n b^n$$

$$a^m / a^n = a^{m-n}$$

where a not equal to zero

4.6 Complex Numbers

A complex number is a number with a real and an imaginary part, usually expressed in Cartesian form

$$\mathbf{a + jb \text{ where } j = \sqrt{-1} \text{ and } j \cdot j = -1}$$

Complex numbers can also be expressed in polar form

$$\mathbf{Ae^{j\theta} \text{ where } A = \sqrt{a^2 + b^2} \text{ and } \theta = \tan^{-1}(b/a)}$$

The polar form can also be expressed in terms of trigonometric functions using the Euler relationship

$$e^{j\theta} = \cos \theta + j \sin \theta$$

Euler Relationship

The trigonometric functions are related to a complex exponential by the Euler relationship

$$e^{jx} = \cos x + j \sin x$$

$$e^{-jx} = \cos x - j \sin x$$

From these relationships the trigonometric functions can be expressed in terms of the complex exponential:

$$\cos x = \frac{e^{jx} + e^{-jx}}{2}$$

$$\sin x = \frac{e^{jx} - e^{-jx}}{2j}$$

This relationship is useful for expressing complex numbers in polar form, as well as many other applications.

Polar Form, Complex Numbers

The standard form of a complex number is

$$a + jb \text{ where } j = \sqrt{-1}$$

Please click the advert

www.job.oticon.dk

oticon
PEOPLE FIRST

But this can be shown to be equivalent to the form

$$\mathbf{A}e^{j\theta} \text{ where } \mathbf{A} = \sqrt{a^2 + b^2} \text{ and } \theta = \tan^{-1}(b/a)$$

which is called the polar form of a complex number. The equivalence can be shown by using the Euler relationship for complex exponentials.

$$Ae^{j\theta} = \sqrt{a^2 + b^2} \left(\cos \left[\tan^{-1} \frac{b}{a} \right] + j \sin \left[\tan^{-1} \frac{b}{a} \right] \right)$$

$$Ae^{j\theta} = \sqrt{a^2 + b^2} \left(\frac{a}{\sqrt{a^2 + b^2}} + j \frac{b}{\sqrt{a^2 + b^2}} \right) = a + jb$$

5 Engineering Concepts and Formulae

5.1 Electricity

Ohm's Law

$$I = \frac{V}{R}$$

Or

$$V = IR$$

Where

I = current (amperes)

E = electromotive force (volts)

R = resistance (ohms)

Temperature correction

$$R_t = R_0 (1 + \alpha t)$$

Where

R_0 = resistance at 0°C (.)

R_t = resistance at t°C (.)

α = temperature coefficient which has an average value for copper of 0.004 28 (Ω/Ω °C)

$$R_2 = R_1 \frac{(1 + \alpha t_2)}{(1 + \alpha t_1)}$$

Where R_1 = resistance at t_1

R_2 = resistance at t_2

| Values of alpha | $\Omega/\Omega\text{ }^\circ\text{C}$ |
|-----------------|---------------------------------------|
| Copper | 0.00428 |
| Platinum | 0.00358 |
| Nickel | 0.00672 |
| Tungsten | 0.00450 |
| Aluminum | 0.0040 |

$$\text{Current, } I = \frac{nqvtA}{t} = nqvA$$

Conductor Resistivity

$$R = \frac{\rho L}{a}$$

Where

ρ = specific resistance (or resistivity) (ohm meters, Ωm)

L = length (meters)

a = area of cross-section (square meters)

| Quantity | Equation |
|-------------------------------------|---|
| Resistance R of a uniform conductor | $R = \rho \frac{L}{A}$ |
| Resistors in series, R_s | $R_s = R_1 + R_2 + R_3$ |
| Resistors in parallel, R_p | $\frac{1}{R_p} = \frac{1}{R_1} + \frac{1}{R_2} + \frac{1}{R_3}$ |
| Power dissipated in resistor: | $P = VI = I^2R = \frac{V^2}{R}$ |
| Potential drop across R | $V = IR$ |

Dynamo Formulae

$$\text{Average e.m.f. generated in each conductor} = \frac{2\phi NpZ}{60c}$$

Where

Z = total number of armature conductors

c = number of parallel paths through winding between positive and negative brushes

Where c = 2 (wave winding), c = 2p (lap winding)

Φ = useful flux per pole (webers), entering or leaving the armature

p = number of pairs of poles

N = speed (revolutions per minute)

Generator Terminal volts = $E_G - I_a R_a$

Motor Terminal volts = $E_B + I_a R_a$

Where E_G = generated e.m.f.

E_B = generated back e.m.f.

I_a = armature current

R_a = armature resistance

Alternating Current

RMS value of sine curve = 0.707 of maximum value

Mean Value of Sine wave = 0.637 of maximum value

Form factor = RMS value / Mean Value = 1.11

Frequency of Alternator = $\frac{pN}{60}$ cycles per second

Where p is number of pairs of poles

N is the rotational speed in r/min

Slip of Induction Motor

$$[(\text{Slip speed of the field} - \text{Speed of the rotor}) / \text{Speed of the Field}] \times 100$$

Inductors and Inductive Reactance

| Physical Quantity | Equation |
|--|--|
| Inductors and Inductance | $V_L = L \frac{di}{dt}$ |
| Inductors in Series: | $L_T = L_1 + L_2 + L_3 + \dots$ |
| Inductor in Parallel: | $\frac{1}{L_T} = \frac{1}{L_1} + \frac{1}{L_2} + \frac{1}{L_3} + \dots$ |
| Current build up (switch initially closed after having been opened) | At $v_L(t) = E e^{-\frac{t}{\tau}}$ $v_R(t) = E(1 - e^{-\frac{t}{\tau}})$ $i(t) = \frac{E}{R} (1 - e^{-\frac{t}{\tau}})$ $\tau = \frac{L}{R}$ |
| Current decay (switch moved to a new position) | $i(t) = I_o e^{-\frac{t}{\tau}}$ $v_R(t) = R i(t)$ $v_L(t) = -R_T i(t)$ $\tau' = \frac{L}{R_T}$ |
| Alternating Current | $f = 1/T$ $\omega = 2 \pi f$ |
| Complex Numbers: | $C = a + j b$ $C = M \cos \theta + j M \sin \theta$ $M = \sqrt{a^2 + b^2}$ $\theta = \tan^{-1}\left(\frac{b}{a}\right)$ |
| Polar form: | $C = M \angle \theta$ |
| Inductive Reactance | $ X_L = \omega L$ |
| Capacitive Reactance | $ X_C = 1 / (\omega C)$ |
| Resistance | R |

| Physical Quantity | Equation |
|-------------------|---|
| Impedance | Resistance: $Z_R = R \angle 0^\circ$ Inductance: $Z_L = X_L \angle 90^\circ = \omega L \angle 90^\circ$ Capacitance: $Z_C = X_C \angle -90^\circ = 1 / (\omega C) \angle -90^\circ$ |

| Quantity | Equation |
|----------------------|--|
| Ohm's Law for AC | $V = I Z$ |
| Time Domain | $v(t) = V_m \sin (\omega t \pm \phi)$ $i(t) = I_m \sin (\omega t \pm \phi)$ |
| Phasor Notation | $V = V_{rms} \angle \phi$ $V = V_m \angle \phi$ |
| Components in Series | $Z_T = Z_1 + Z_2 + Z_3 + \dots$ |
| Voltage Divider Rule | $V_x = V_T \frac{Z_x}{Z_T}$ |

Turning a challenge into a learning curve.
Just another day at the office for a high performer.

Accenture Boot Camp – your toughest test yet

Choose Accenture for a career where the variety of opportunities and challenges allows you to make a difference every day. A place where you can develop your potential and grow professionally, working alongside talented colleagues. The only place where you can learn from our unrivalled experience, while helping our global clients achieve high performance. If this is your idea of a typical working day, then Accenture is the place to be.

It all starts at Boot Camp. It's 48 hours that will stimulate your mind and enhance your career prospects. You'll spend time with other students, top Accenture Consultants and special guests. An inspirational two days

packed with intellectual challenges and activities designed to let you discover what it really means to be a high performer in business. We can't tell you everything about Boot Camp, but expect a fast-paced, exhilarating

and intense learning experience. It could be your toughest test yet, which is exactly what will make it your biggest opportunity.

Find out more and apply online.

Power dissipation

| | |
|---------------------------------|--------------------------|
| Average power, | $P = VI \cos \phi$ Watts |
| Power dissipation in a resistor | $P = I ^2 R$ Watts |

Rectification

| | |
|--------------------------------|---|
| Controlled half wave rectifier | Average DC voltage = $\frac{V_m}{2\pi} (1 + \cos \alpha)$ Volts |
| Controlled full wave rectifier | Average DC voltage = $\frac{V_m}{\pi} (1 + \cos \alpha)$ Volts |

Power Factor

| | |
|----------|---|
| DC Power | $P_{dc} = VI = I^2 R = \frac{V^2}{R}$ |
| AC Power | $P_{ac} = \text{Re}(V.I) = V \cos \phi$ |

Power in ac circuits

| Quantity | Equation |
|------------------------|---|
| Resistance | The mean power = $\bar{P} = I_{rms} V_{rms} = I_{rms}^2 R$ |
| Inductance | The instantaneous power = $(I_o \sin \omega t) (V_o \sin (\omega t + \pi))$ |
| The mean power | $\bar{P} = 0$ |
| Capacitance | The instantaneous power = $(I_o \sin (\omega t + \pi/2)) (V_o \sin \omega t)$ |
| The mean power | $\bar{P} = 0$ |
| Formula for a.c. power | The mean power = $\bar{P} = I_{rms} V_{rms} \cos \phi$ |

Three Phase Alternators

Star connected

Line voltage = $\sqrt{3} \cdot \text{Phase Voltage}$

Line current = phase current

Delta connected

Line voltage = phase voltage

Line current = $\sqrt{3} \cdot \text{Phase Current}$

Three phase power

$$P = \sqrt{3} \cdot E_L \cdot I_L \cdot \text{Cos } \phi$$

Where:

P is the active power in Watts

E_L is the Line Voltage in Volts

I_L is the line current in Amperes

Cos f is the power factor

Electrostatics

| Quantity | Equation |
|------------------------------|---|
| Instantaneous current, | $I = \frac{dq}{dt} = C \frac{dv}{dt}$ Amperes |
| Permittivity of free space | $\epsilon_0 = \frac{10^{-9}}{36\pi} = 8.85 \times 10^{-12}$ Farads (meters) ⁻¹ |
| Energy stored in a capacitor | $= \frac{1}{2} CV^2$ Joules |

| Quantity | Equation |
|--|------------------------------------|
| Coulomb's law | $F = k \frac{Q_1 Q_2}{r^2}$ |
| Electric fields | $E = \frac{F}{q}$ |
| Due to a point charge | $E = \frac{Q}{4\pi\epsilon_0 r^2}$ |
| Due to a conducting sphere carrying charge Q Inside the sphere | $E = 0$ |
| Outside the sphere | $E = \frac{Q}{4\pi\epsilon_0 r^2}$ |
| Just outside a uniformly charged conducting sphere or plate | $E = \frac{\sigma}{\epsilon_0}$ |

- An electric field E is a vector
- The electric field strength is directly proportional to the number of electric field lines per unit cross-sectional area,

- The electric field at the surface of a conductor is perpendicular to the surface.
- The electric field is zero inside a conductor.

| Quantity | Equation |
|---|-----------------------------------|
| Suppose a point charge Q is at A. The work done in bringing a charge q from infinity to some point a distance r from A is | $W = \frac{Qq}{4\pi\epsilon_0 r}$ |
| Electric potential | $V = \frac{W}{q}$ |
| Due to a point charge | $V = \frac{Q}{4\pi\epsilon_0 r}$ |
| Due to a conducting sphere, of radius a , carrying charge Q : | |
| Inside the sphere | $V = \frac{Q}{4\pi\epsilon_0 a}$ |
| Outside the sphere | $V = \frac{Q}{4\pi\epsilon_0 r}$ |
| If the potential at a point is V , then the potential energy of a charge q at that point is | $U = qV$ |
| Work done in bringing charge q from A of potential V_A to point B of potential V_B | $W = q(V_B - V_A)$ |

Brain power

By 2020, wind could provide one-tenth of our planet's electricity needs. Already today, SKF's innovative know-how is crucial to running a large proportion of the world's wind turbines.

Up to 25 % of the generating costs relate to maintenance. These can be reduced dramatically thanks to our systems for on-line condition monitoring and automatic lubrication. We help make it more economical to create cleaner, cheaper energy out of thin air.

By sharing our experience, expertise, and creativity, industries can boost performance beyond expectations. Therefore we need the best employees who can meet this challenge!

| Magnetic fields around a long straight wire carrying current I | $B = \frac{\mu_o I}{2\pi a}$ where a = perp. distance from a very long straight wire. |
| Magnetic fields inside a long solenoid, carrying current | I: $B = \mu_o n I$, where n = number of turns per unit length. |
| Hall effect At equilibrium | $Q \frac{V_H}{d} = QvB$ and $V_H = B v d$ |
| The current in a material is given by | $I = nQAv$ |
| The forces between two current-carrying conductors | $F_1 = \frac{\mu_o I_1 I_2 \ell}{2\pi a}$ |

| Physical Quantity | Equation |
|--|--|
| The torque on a rectangular coil in a magnetic field | $T = F b \sin \theta$ $= N I \ell B b \sin \theta$ $= N I A B \sin \theta$ |
| If the coil is in a radial field and the plane of the coil is always parallel to the field, then | $T = N I A B \sin \theta$ $= N I A B \sin 90^\circ$ $= N I A B$ |
| Magnetic flux ϕ | $\phi = B A \cos \theta$ and Flux-linkage = $N\phi$ |
| Current Sensitivity | $S_I = \frac{\theta}{I} = \frac{NAB}{c}$ |

| | |
|--|-------------------------------------|
| <p>Lenz's law</p> <p>The direction of the induced e.m.f. is such that it tends to oppose the flux-change causing it, and does oppose it if induced current flows.</p> | $\varepsilon = -N \frac{d\phi}{dt}$ |
|--|-------------------------------------|

EMF Equations

| | |
|--|----------------------------------|
| E.m.f. induced in a straight conductor | $\varepsilon = B L v$ |
| E.m.f. induced between the center and the rim of a spinning disc | $\varepsilon = B \pi r^2 f$ |
| E.m.f. induced in a rotating coil | $E = N A B \omega \sin \omega t$ |

| Quantity | Equation |
|-------------------------------|--|
| Self-induction | $L = - \frac{\varepsilon}{dI / dt}$ $N \phi = L I$ |
| Energy stored in an inductor: | $U = \frac{1}{2} L I^2$ |
| Transformers: | $\frac{V_S}{V_P} = \frac{N_S}{N_P}$ |
| The L R (d.c.) circuit: | $I = \frac{E}{R} (1 - e^{-Rt/L})$ |

| Quantity | Equation |
|---|--|
| When a great load (or smaller resistance) is connected to the secondary coil, the flux in the core decreases. The e.m.f., ϵ_p , in the primary coil falls. | $V_p - \epsilon_p = I R; I = \frac{V_p - \epsilon_p}{R}$ |

Kirchoff’s laws

Kirchoff’s first law (Junction Theorem)

At a junction, the total current entering the junction is equal to the total current leaving the junction.

Kirchoff’s second law (Loop Theorem)

The net e.m.f. round a circuit is equal to the sum of the p.d.s round the loop.

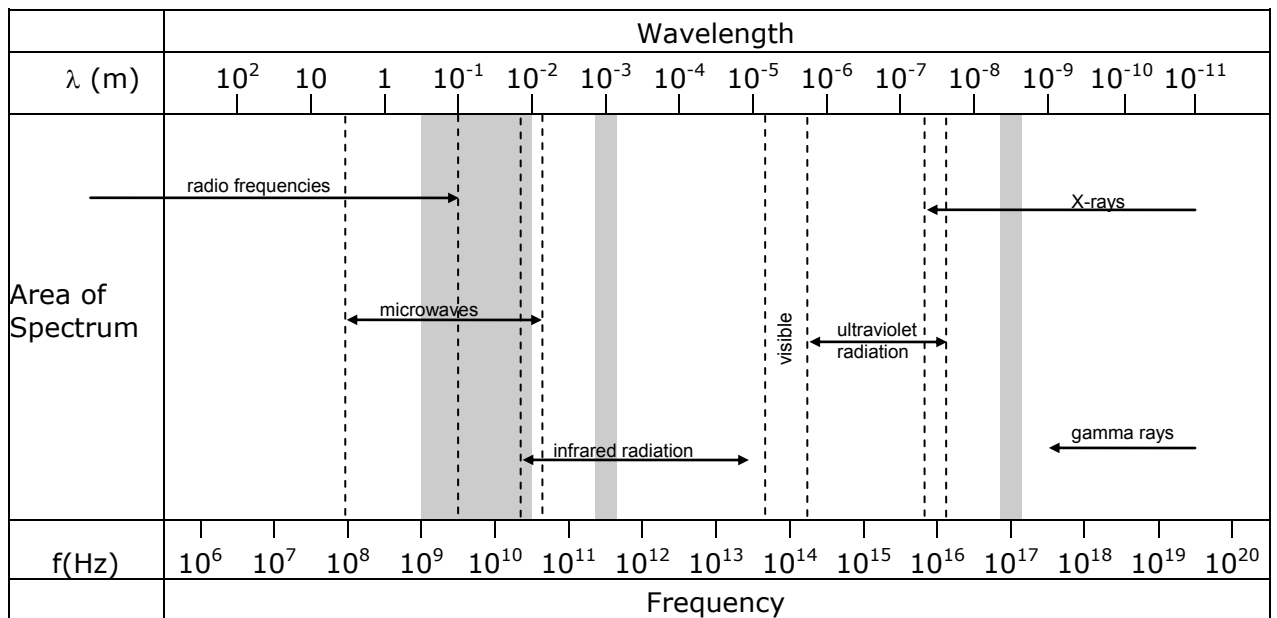

| Physical Quantity | Equation |

Electromagnetic spectrum

- Note:
1. Shaded areas represent regions of overlap.
 2. Gamma rays and X-rays occupy a common region.

5.2 Applied Mechanics

5.2.1 Newton's laws of motion

Newton's first law of motion

The inertia of a body is the reluctance of the body to change its state of rest or motion.

Mass is a measure of inertia.

Newton's second law of motion

$$F = \frac{m v - m u}{\Delta t} ;$$

$$F = m a$$

Impulse = force · time = change of momentum

$$F t = m v - m u$$

Newton's third law of motion

When two objects interact, they exert equal and opposite forces on one another.

“Third-law pair” of forces act on two different bodies.

Universal Law

$$F = G m_s m_p / d^2$$

m_s is the mass of the sun.

m_p is the mass of the planet.

The Universal law and the second law must be consistent

Newton's Laws of Motion and Their Applications

| Physical Quantity | Equations |
|--------------------------------|---|
| Average velocity | $v_{av} = \frac{s}{t} = \frac{v + u}{2}$ |
| Acceleration | $a = \frac{v - u}{t}$ |
| Momentum | $p = mv$ |
| Force | $F = ma$ |
| Weight | weight = mg |
| Work done | $W = Fs$ |
| Kinetic energy | $E_k = \frac{1}{2} mv^2$ |
| Gravitational potential energy | $E_p = mgh$ |
| Equations of motion | $a = \frac{v - u}{t} ; \quad s = ut + \frac{1}{2} at^2 ; \quad v^2 = u^2 + 2as$ |

| Physical Quantity | Equations |
|---------------------------------------|-----------------------------|
| Centripetal acceleration | $a = \frac{v^2}{r}$ |
| Centripetal force | $F = ma = \frac{mv^2}{r}$ |
| Newton's Law of Universal Gravitation | $F = G \frac{m_1 m_2}{r^2}$ |
| Gravitational field strength | $g = G \frac{M}{r^2}$ |

| Physical Quantity | Equations |
|----------------------|-------------------------------|
| Moment of a force | $M = rF$ |
| Principle of moments | $\sum M = 0$ |
| Stress | $\text{Stress} = \frac{F}{A}$ |

A division of FirstRand Bank Limited
Traditional values. Innovative ideas.

YOU THINK. YOU CAN WORK AT RMB

Rand Merchant Bank uses good business to create a better world, which is one of the reasons that the country's top talent chooses to work at RMB. For more information visit us at www.rmb.co.za

Thinking that can change your world

Rand Merchant Bank is an Authorised Financial Services Provider

| | |
|-----------------|--------------------------------------|
| Strain | $\text{Strain} = \frac{\Delta l}{l}$ |
| Young's Modulus | $Y = \frac{F/A}{\Delta l/l}$ |

Scalar: a property described by a magnitude only

Vector: a property described by a magnitude and a direction

Velocity: vector property equal to displacement / time

The magnitude of velocity may be referred to as **speed**

In SI the basic unit is m/s, in Imperial ft/s

Other common units are km/h, mi/h

Conversions:

$$1\text{m/s} = 3.28 \text{ ft/s}$$

$$1\text{km/h} = 0.621 \text{ mi/h}$$

Speed of sound in dry air is 331 m/s at 0°C and increases by about 0.61 m/s for each °C rise.

Speed of light in vacuum equals $3 \times 10^8\text{m/s}$

Acceleration: vector property equal to change in velocity time.

In SI the basic unit is m/s^2

In Imperial ft/s^2

Conversion:

$$1 \frac{m}{s^2} = 3.28 \frac{ft}{s^2}$$

Acceleration due to gravity, g is 9.81 m/s^2

5.2.2 Linear Velocity and Acceleration

| Quantity | Equations |
|--|--|
| If u initial velocity and v final velocity, then displacement s, | $s = \left(\frac{v + u}{2} \right) t$ |
| If t is the elapsed time | $s = ut + \frac{1}{2} at^2$ |
| If a is the acceleration | $v^2 = u^2 + 2as$ |

Angular Velocity and Acceleration

| Quantity | Equations |
|--|---|
| θ angular displacement (radians) | $\theta = \frac{\omega_1 + \omega_2}{2} \times t$ |
| ω angular velocity (radians/s); $\omega_1 = \text{initial}, \omega_2 = \text{final}$ | $\theta = \omega_1 t + \frac{1}{2} \alpha t^2$ |
| α angular acceleration (radians/s ²) | $\omega_2^2 = \omega_1^2 + 2\alpha\theta$ |
| Linear displacement | $s = r \theta$ |
| Linear velocity | $v = r \omega$ |
| Linear, or tangential acceleration | $a_T = r \alpha$ |

Tangential, Centripetal and Total Acceleration

| Quantity | Equations |
|--|----------------------------|
| Tangential acceleration a_T is due to angular acceleration α | $a_T = r \alpha$ |
| Centripetal (Centrifugal) acceleration a_c is due to change in direction only | $a_c = v^2/r = r \omega^2$ |
| Total acceleration, a , of a rotating point experiencing angular acceleration is the vector sum of a_T and a_c | $a = a_T + a_c$ |

5.2.3 Force

Vector quantity, a push or pull which changes the shape and/or motion of an object

In SI the unit of force is the newton, N, defined as a kg m

In Imperial the unit of force is the pound lb

Conversion: 9.81 N = 2.2 lb

Weight

The gravitational force of attraction between a mass, m , and the mass of the Earth

In SI weight can be calculated from $\text{Weight} = F = mg$, where $g = 9.81 \text{ m/s}^2$

In Imperial, the mass of an object (rarely used), in slugs, can be calculated from the known weight in pounds

$$m = \frac{\text{weight}}{g}$$

$$g = 32.2 \frac{\text{ft}}{\text{s}^2}$$

Torque Equation

$T = I \alpha$ where T is the acceleration torque in Nm, I is the moment of inertia in kg m² and α is the angular acceleration in radians/s²

Momentum

Vector quantity, symbol p ,

$p = mv$ [Imperial $p = (w/g)v$, where w is weight]

in SI unit is kgm / s

Work

Scalar quantity, equal to the (vector) product of a force and the displacement of an object. In simple systems, where W is work, F force and s distance

$$W = F s$$

In SI the unit of work is the joule, J, or kilojoule, kJ

$$1 \text{ J} = 1 \text{ Nm}$$

In Imperial the unit of work is the ft-lb

Energy

Energy is the ability to do work, the units are the same as for work; J, kJ, and ft-lb

Kinetic Energy

$$E_R = \frac{1}{2} m k^2 \omega^2$$

Where k is radius of gyration, ω is angular velocity in rad/s

Please click the advert

Discover the truth at www.deloitte.ca/careers

Deloitte.

© Deloitte & Touche LLP and affiliated entities.

Kinetic Energy of Rotation

$$Er = \frac{1}{2} I \omega^2$$

Where I = mk² is the moment of inertia

5.2.4 Centripetal (Centrifugal) Force

$$F_c = \frac{mv^2}{r}$$

Where r is the radius

Where ω is angular velocity in rad/s

Potential Energy

| Quantity | Equation |
|--|---|
| Energy due to position in a force field, such as gravity | Ep = m g h |
| In Imperial this is usually expressed | Ep = w h Where w is weight, and h is height above some specified datum |

Thermal Energy

In SI the common units of thermal energy are J, and kJ, (and kJ/kg for specific quantities)

In Imperial, the units of thermal energy are British Thermal Units (Btu)

Conversions

1 Btu = 1055 J

1 Btu = 778 ft-lb

Electrical Energy

In SI the units of electrical energy are J, kJ and kilowatt hours kWh. In Imperial, the unit of electrical energy is the kWh

Conversions

1 kWh = 3600 kJ

1 kWh = 3412 Btu = 2.66 x 10⁶ ft-lb

Power

A scalar quantity, equal to the rate of doing work

In SI the unit is the Watt W (or kW)

$$1W = 1 \frac{J}{s}$$

In Imperial, the units are:

Mechanical Power – (ft – lb) / s, horsepower h.p.

Thermal Power – Btu / s

Electrical Power - W, kW, or h.p.

Conversions

$$746W = 1h.p.$$

$$1h.p. = 550 \frac{ft-lb}{s}$$

$$1kW = 0.948 \frac{Btu}{s}$$

Pressure

A vector quantity, force per unit area

In SI the basic units of pressure are pascals Pa and kPa

$$1Pa = 1 \frac{N}{m^2}$$

In Imperial, the basic unit is the pound per square inch, psi

Atmospheric Pressure

At sea level atmospheric pressure equals 101.3 kPa or 14.7 psi

Pressure Conversions

$$1 \text{ psi} = 6.895 \text{ kPa}$$

Pressure may be expressed in standard units, or in units of static fluid head, in both SI and Imperial systems

Common equivalencies are:

- 1 kPa = 0.294 in. mercury = 7.5 mm mercury
- 1 kPa = 4.02 in. water = 102 mm water
- 1 psi = 2.03 in. mercury = 51.7 mm mercury
- 1 psi = 27.7 in. water = 703 mm water
- 1 m H₂O = 9.81 kPa

Other pressure unit conversions:

- 1 bar = 14.5 psi = 100 kPa
- 1 kg/cm² = 98.1 kPa = 14.2 psi = 0.981 bar
- 1 atmosphere (atm) = 101.3 kPa = 14.7 psi

Simple Harmonic Motion

$$\text{Velocity of P} = \omega \sqrt{R^2 - x^2} \frac{m}{s}$$

5.2.5 Stress, Strain And Modulus Of Elasticity

Young's modulus and the breaking stress for selected materials

5.3 Thermodynamics

5.3.1 Laws of Thermodynamics

- $W = P\Delta V$
- $\Delta U = Q - W$
- $W = nRT \ln V_f/V_i$
- $Q = Cn\Delta T$
- $C_v = 3/2R$
- $C_p = 5/2R$
- $C_p/C_v = \gamma = 5/3$
- $e = 1 - Q_c/Q_h = W/Q_h$
- $e_c = 1 - T_c/T_h$
- $COP = Q_c/W$ (refrigerators)
- $COP = Q_h/W$ (heat pumps)
- $W_{max} = (1 - T_c/T_h)Q_h$
- $\Delta S = Q/T$

5.3.2 Momentum

- $p = mv$
- $\Sigma F = \Delta p/\Delta t$

5.3.3 Impulse

$$I = F_{av} \Delta t = mv_f - mv_i$$

5.3.4 Elastic and Inelastic collision

- $m_1 v_{1i} + m_2 v_{2i} = m_1 v_{1f} + m_2 v_{2f}$
- $(\frac{1}{2}) m_1 v_{1i}^2 + (\frac{1}{2}) m_2 v_{2i}^2 = \frac{1}{2} m_1 v_{1f}^2 + \frac{1}{2} m_2 v_{2f}^2$
- $m_1 v_{1i} + m_2 v_{2i} = (m_1 + m_2) v_f$

5.3.5 Center of Mass

- $x_{cm} = \Sigma mx/M$
- $V_{cm} = \Sigma mv/M$
- $A_{cm} = \Sigma ma/M$
- $MA_{cm} = F_{net}$

5.3.6 Angular Motion

- $s = r\theta$
- $v_t = r\omega$
- $a_t = r\alpha$
- $a_c = v_t^2/r = r\omega^2$
- $\omega = 2\pi/T$
- $1 \text{ rev} = 2\pi \text{ rad} = 360^\circ$

For constant α

- $\omega = \omega_o + \alpha t$
- $\omega^2 = \omega_o^2 + 2\alpha\theta$
- $\theta = \omega_o t + \frac{1}{2}\alpha t^2$
- $\theta = (\omega_o + \omega) \cdot t/2$
- $I = \Sigma mr^2$
- $KE_R = \frac{1}{2}I\omega^2$
- $\tau = rF$
- $\Sigma\tau = I\alpha$
- $W_R = \tau\theta$
- $L = I\omega$
- $\Sigma\tau = I\alpha$
- $W_R = \tau\theta$
- $L = I\omega$
- $L_i = L_f$

5.3.7 Conditions of Equilibrium

- $\Sigma F_x = 0$
- $\Sigma F_y = 0$
- $\Sigma\tau = 0$ (any axis)

5.3.8 Gravity

- $F = Gm_1m_2/r^2$
- $T = 2\pi / \sqrt{r^3/GM_s}$
- $G = 6.67 \times 10^{-11} \text{N}\cdot\text{m}^2/\text{kg}^2$
- $g = GM_E / R_E^2$
- $PE = - Gm_1m_2 / r$
- $v_e = \sqrt{2GM_E / R_E}$
- $v_s = \sqrt{GM_E / r}$
- $M_E = 5.97 \times 10^{24} \text{ kg}$
- $R_E = 6.37 \times 10^6 \text{ m}$

5.3.9 Vibrations & Waves

- $F = -kx$
- $PE_s = \frac{1}{2}kx^2$
- $x = A\cos\theta = A\cos(\omega t)$
- $v = -A\omega\sin(\omega t)$
- $a = -A\omega^2\cos(\omega t)$
- $\omega = \sqrt{k / m}$
- $f = 1 / T$
- $T = 2\pi\sqrt{m / k}$
- $E = \frac{1}{2}kA^2$

See the light!

5.3.20 Efficiency of Heat Engines

Carnot Cycle

$$\eta = \frac{T_1 - T_2}{T_1}$$

where T_1 and T_2 are absolute temperatures of heat source and sink

Air Standard Efficiencies

Spark Ignition Gas and Oil Engines (Constant Volume Cycle)

$$\eta = 1 - \frac{1}{r_v^{(\gamma-1)}}$$

r_v = compression ratio

γ = specific heat (constant pressure) / Specific heat (constant volume)

Diesel Cycle

$$\eta = 1 - \frac{R\gamma - 1}{r_v^{\gamma-1} \gamma (R - 1)}$$

Where r = ratio of compression

R = ratio of cut-off volume to clearance volume

High Speed Diesel (Dual-Combustion) Cycle

$$\eta = 1 - \frac{k\beta^\gamma - 1}{r_v^{\gamma-1} [(k-1) + \gamma k(\beta-1)]}$$

Where r_v = cylinder volume / clearance volume

k = absolute pressure at the end of constant V heating (combustion) / absolute pressure at the beginning of constant V combustion

β = volume at the end of constant P heating (combustion) / clearance volume

Gas Turbines (Constant Pressure or Brayton Cycle)

$$\eta = 1 - \frac{1}{r_p^{\left(\frac{\gamma-1}{\gamma}\right)}}$$

where r_p = pressure ratio = compressor discharge pressure / compressor intake pressure

5.3.21 Heat Transfer by Conduction

| Material | Coefficient of Thermal Conductivity W/m °C |
|----------|---|
| Air | 0.025 |
| Brass | 104 |

kbm@bookboon.com

| Material | Coefficient of Thermal Conductivity W/m °C |
|-------------------|---|
| Concrete | 0.85 |
| Cork | 0.043 |
| Glass | 1.0 |
| Iron, cast | 70 |
| Steel | 60 |
| Wallboard, paper | 0.076 |
| Aluminum | 206 |
| Brick | 0.6 |
| Copper | 380 |
| Felt | 0.038 |
| Glass, fibre | 0.04 |
| Plastic, cellular | 0.04 |
| Wood | 0.15 |

5.3.22 Thermal Expansion of Solids

Increase in length = $L \alpha (T_2 - T_1)$

Where L = original length

α = coefficient of linear expansion

$(T_2 - T_1)$ = rise in temperature

Increase in volume = $V \beta (T_2 - T_1)$

Where V = original volume

β = coefficient of volumetric expansion

$(T_2 - T_1)$ = rise in temperature

Coefficient of volumetric expansion = Coefficient of linear expansion $\times 3$

$\beta = 3\alpha$

5.3.23 Chemical Heating Value of a Fuel

Chemical Heating Value MJ per kg of fuel = $33.7C + 144(H_2 - \frac{O_2}{8}) + 9.3S$

C is the mass of carbon per kg of fuel

H_2 is the mass of hydrogen per kg of fuel

O_2 is the mass of oxygen per kg of fuel

S is the mass of sulphur per kg of fuel

Theoretical Air Required to Burn Fuel

$$\text{Air (kg per kg of fuel)} = \left[\frac{8}{3}C + 8(H_2 - O_2) + S \right] \frac{100}{23}$$

Air Supplied from Analysis of Flue Gases

$$\text{Air in kg per kg of fuel} = \frac{N_2}{33(CO_2 + CO)} \times C$$

Boiler Formulae

$$\text{Equivalent evaporation} \frac{m_s (h_1 - h_2)}{2257 \text{ kJ/kg}}$$

$$\text{Factor of evaporation} \frac{(h_1 - h_2)}{2257 \text{ kJ/kg}}$$

Boiler Efficiency

$$\frac{m_s (h_1 - h_2)}{m_f \times (\text{calorific value})}$$

Where

- m_s = mass flow rate of steam
- h_1 = enthalpy of steam produced in boiler
- h_2 = enthalpy of feedwater to boiler
- m_f = mass flow rate of fuel

| Name of process | Value of n | P-V-T Relationships | | | Heat added | Work done | Change in Internal Energy | Change in Enthalpy | Change in Entropy |
|---------------------------------|------------|---------------------|-------------------------------------|-------------------------------------|-------------------|----------------|---------------------------|--------------------|--|
| | | P-V | T-P | T-V | | | | | |

| Polytropic PV ⁿ = Constant | n | $\frac{P_1}{P_2} = \left[\frac{V_2}{V_1} \right]^n$ | $\frac{T_1}{T_2} = \left[\frac{P_1}{P_2} \right]^{\frac{n-1}{n}}$ | $\frac{T_1}{T_2} = \left[\frac{V_2}{V_1} \right]^{n-1}$ | $mc_n(T_2 - T_1)$ | $\frac{mR}{n-1}(T_1 - T_2)$ | $mc_v(T_2 - T_1)$ | $mc_p(T_2 - T_1)$ | $mc_n \log_e \left(\frac{T_2}{T_1} \right)$ |

Thermodynamic Equations for perfect gases

*Can be used for reversible adiabatic processes

c_v = Specific heat at constant volume, kJ/kgK

c_p = Specific heat at constant pressure, kJ/kgK

$$c_m = \text{Specific heat for polytropic process} = c_v \left(\frac{\gamma - n}{1 - n} \right) \text{kJ/kgK}$$

H = Enthalpy, kJ

γ = Isentropic Exponent, c_p/c_v

n = polytropic exponent

P = Pressure, kPa

Specific Heat and Volume Expansion for Liquids

| Liquid | Specific Heat (at 20 °C) KJ/kgK or kJ/kg °C | Coefficient of Volume Expansion (Multiply by 10 ⁻⁴) |
|----------------|---|--|
| Alcohol | 2.470 | 11.0 |
| Ammonia | 0.473 | |
| Benzine | 1.138 | 12.4 |
| Carbon Dioxide | 3.643 | 1.82 |
| Mercury | 0.139 | 1.80 |
| Olive oil | 1.633 | |
| Petroleum | 2.135 | |
| Gasoline | 2.093 | 12.0 |
| Turpentine | 1.800 | 9.4 |
| Water | 4.183 | 3.7 |

5.4 Fluid Mechanics

5.4.1 Discharge from an Orifice

| | |
|--|---|
| Let A = cross-sectional area of the orifice = | $\frac{\pi}{4} d^2$ |
| And Ac = cross-sectional area of the jet at the vena contracta | $\frac{\pi}{4} d_c^2$ |
| Then $Ac = C_c A$ | Or $C_c = \frac{A_c}{A} = \left(\frac{d_c}{d}\right)^2$ |

Where C_c is the coefficient of contraction

Getting ahead in your management career

Our expertise in flexible and accessible education and your passion to succeed will enable you to get ahead.

A world-class research university, Leicester offers flexible, innovative courses because we understand that you've got other responsibilities. In fact, we're committed to making sure that everyone in our vibrant community gets the very best experience at Leicester, whether you're on campus or on the other side of the world.

Whether you choose to study one of our specialist Masters' courses, or our AMBA accredited MBA by full-time or distance learning, you will join a global network of similarly minded professionals and be supported all the way.

Get ahead, get in touch

At the vena contracta, the volumetric flow rate Q of the fluid is given by

- $Q = \text{area of the jet at the vena contracta} \cdot \text{actual velocity} = A_c V$
- Or $Q = C_c A C_v \sqrt{2gh}$
- Typically, values for Cd vary between 0.6 and 0.65
- Circular orifice: $Q = 0.62 A \sqrt{2gh}$
- Where Q = flow (m³/s) A = area (m²) h = head (m)
- Rectangular notch: $Q = 0.62 (B \cdot H)^{2/3} \sqrt{2gh}$

Where B = breadth (m)

H = head (m above sill)

Triangular Right Angled Notch: $Q = 2.635 H^{5/2}$

Where H = head (m above sill)

5.4.2 Bernoulli's Theory

$$H = h + \frac{P}{w} + \frac{v^2}{2g}$$

H = total head (meters)

w = force of gravity on 1 m³ of fluid (N)

h = height above datum level (meters)

v = velocity of water (meters per second)

P = pressure (N/m² or Pa)

Loss of Head in Pipes Due to Friction

$$\text{Loss of head in meters} = f \frac{L v^2}{d 2g}$$

L = length in meters

v = velocity of flow in meters per second

d = diameter in meters

f = constant value of 0.01 in large pipes to 0.02 in small pipes

5.4.3 Actual pipe dimensions

| Nominal pipe size (in) | Outside diameter (mm) | Inside diameter (mm) | Wall thickness (mm) | Flow area (m ²) |
|------------------------|-----------------------|----------------------|---------------------|-----------------------------|
| 1/8 | 10.3 | 6.8 | 1.73 | 3.660×10^{-5} |
| 1/4 | 13.7 | 9.2 | 2.24 | 6717×10^{-5} |
| 3/8 | 17.1 | 12.5 | 2.31 | 1.236×10^{-4} |
| 1/2 | 21.3 | 15.8 | 2.77 | 1.960×10^{-4} |

| Nominal pipe size (in) | Outside diameter (mm) | Inside diameter (mm) | Wall thickness (mm) | Flow area (m ²) |
|------------------------|-----------------------|----------------------|---------------------|-----------------------------|
| 3/4 | 26.7 | 20.9 | 2.87 | 3.437×10^{-4} |
| 1 | 33.4 | 26.6 | 3.38 | 5.574×10^{-4} |

About IDC Technologies

As one of the world's leading engineering and technology training, consulting and publishing companies, IDC Technologies' strength lies in providing practical and useful technical training for engineers, technicians and other technical personnel. Your business grows by developing the skills and expertise of your most important asset – your people. For the past 12 years, we have helped our clients in achieving their business objectives by developing their people.

We specialize in the fields of electrical systems, industrial data communications, telecommunications, automation and control, mechanical engineering, project and financial management and are continually adding to our portfolio of over 140 different workshops. Our instructors are highly respected in their fields of expertise and in the last ten years have trained over 140,000 engineers, technicians and other technical personnel. With offices conveniently located worldwide, IDC Technologies has an enthusiastic team of professional engineers, technicians and support staff who are committed to providing the highest quality of training, publishing and consultancy services.

Our worldwide offices are located in:

Australia

Canada

Ireland

New Zealand

Singapore

South Africa

United Kingdom

USA

PEOPLE FIRST

Past Participants Say

“Excellent instructor with plenty of practical knowledge.”

Ian Kemp, ANSTO

“Excellent depth of subject knowledge displayed.”

Hugh Donohue, AMEC

“Saved hours of trial and error.”

Mario Messwa, DAPS

“I’ve gained more useful info from this seminar than any I’ve previously attended.”

Jim Hannen, Wheeling-Misshen Inc.

“This is the 2nd IDC Technologies class I have taken – both have been excellent!”

John Harms, Avista Corporation

“A most enjoyable and informative course. Thank you.”

Pat V Hammond, Johnson Matthey PLC

“Written material was about the best I’ve seen for this type of course. The instructor was able to set an excellent pace and was very responsive to the class.”

John Myhill, Automated Control Systems

“Excellent, I have taken a TCP/IP Class before and didn’t understand it. After this course, I feel more confident with my newfound knowledge.”

John Armbrust, Phelps Dodge

“This was one of the best courses I have ever been on. The instructor was excellent and kept me fully interested from start to finish. Really glad I attended.”

Chris Mercer, Air Products

“Very competent and great presenter.”

David Wolfe, Acromag

“Well presented, excellent material”

Stephen Baron, Air Products

“Excellent presentation! Well done.”

Brett Muhlhauser, Connell Wagner

“Well compiled technical material.”

Robert Higgenbotham, Yallourn Energy

“Well presented and the instructor obviously has the practical knowledge to back things up.”

Mike Mazurak, ANSTO

“Great refresher on current practice. Also helped to bring me up to date on new technology.”

E. Burnie, Sellotape

“I like the practicality of the workshop.”

Karl Armfield, Joy Mining

TECHNOLOGY TRAINING THAT WORKS

We deliver engineering and technology training that will maximize your business goals. In today's competitive environment, you require training that will help you and your organization to achieve its goals and produce a large return on investment. With our "Training that Works" objective you and your organization will:

- Get job-related skills that you need to achieve your business goals
- Improve the operation and design of your equipment and plant
- Improve your troubleshooting abilities
- Sharpen your competitive edge
- Boost morale and retain valuable staff
- Save time and money

EXPERT INSTRUCTORS

We search the world for good quality instructors who have three key attributes:

1. Expert knowledge and experience – of the course topic
2. Superb training abilities – to ensure the know-how is transferred effectively and quickly to you in a practical hands-on way
3. Listening skills – they listen carefully to the needs of the participants and want to ensure that you benefit from the experience Each and every instructor is evaluated by the delegates and we assess the presentation after each class to ensure that the instructor stays on track in presenting outstanding courses.

HANDS-ON APPROACH TO TRAINING

All IDC Technologies workshops include practical, hands-on sessions where the delegates are given the opportunity to apply in practice the theory they have learnt.

QUALITY MANUALS

A fully illustrated workshop manual with hundreds of pages of tables, charts, figures and handy hints, plus considerable reference material is provided FREE of charge to each delegate.

ACCREDITATION AND CONTINUING EDUCATION

IDC workshops satisfy criteria for Continuing Professional Development for most engineering professional associations throughout the world (incl. The Institution of Electrical Engineers and Institution of Measurement and Control in the UK, Institution of Engineers in Australia, Institution of Engineers New Zealand)

CERTIFICATE OF ATTENDANCE

Each delegate receives a Certificate of Attendance documenting their experience.

100% MONEY BACK GUARANTEE

IDC Technologies' engineers have put considerable time and experience into ensuring that you gain maximum value from each workshop. If by lunch time of the first day you decide that the workshop is not appropriate for your requirements, please let us know so that we can arrange a 100% refund of your fee.

ON-SITE TRAINING

On-site training is a cost-effective method of training for companies with several employees to train in a particular area. Organizations can save valuable training dollars by holding courses on-site, where costs are significantly less. Other benefits are IDC's ability to focus on particular systems and equipment so that attendees obtain the greatest benefit from the training. All on-site workshops are tailored to meet with our client's training requirements and courses can be presented at beginners, intermediate or advanced levels based on the knowledge and experience of the delegates in attendance. Specific areas of interest to the client can also be covered in more detail.

CUSTOMIZED TRAINING

In addition to standard on-site training, IDC Technologies specializes in developing customized courses to meet our client's training needs. IDC has the engineering and training expertise and resources to work closely with clients in preparing and presenting specialized courses. You may select components of current IDC workshops to be combined with additional topics or we can design a course entirely to your specifications. The benefits to companies in adopting this option are reflected in the increased efficiency of their operations and equipment.

ON-SITE & CUSTOMIZED TRAINING

SAVE OVER 50%**SPECIALIST CONSULTING**

IDC Technologies has been providing high quality specialist advice and consulting for more than ten years to organizations around the world. The technological world today presents tremendous challenges to engineers, scientists and technicians in keeping up to date and taking advantage of the latest developments in the key technology areas. We pride our selves on being the premier provider of practical and cost-effective engineering solutions.

PROFESSIONALLY STAFFED

IDC Technologies consists of an enthusiastic and experienced team that is committed to providing the highest quality in consulting services. The company has thirty-five professional engineers; quality focused support staff, as well as a vast resource base of specialists in their relevant fields.

CLIENT FOCUS

IDC's independence and impartiality guarantee that clients receive unbiased advice and recommendations, focused on providing the best technical and economical solutions to the client's specific and individual requirements.

Turning a challenge into a learning curve.
Just another day at the office for a high performer.

Accenture Boot Camp – your toughest test yet

Choose Accenture for a career where the variety of opportunities and challenges allows you to make a difference every day. A place where you can develop your potential and grow professionally, working alongside talented colleagues. The only place where you can learn from our unrivalled experience, while helping our global clients achieve high performance. If this is your idea of a typical working day, then Accenture is the place to be.

It all starts at Boot Camp. It's 48 hours that will stimulate your mind and enhance your career prospects. You'll spend time with other students, top Accenture Consultants and special guests. An inspirational two days

packed with intellectual challenges and activities designed to let you discover what it really means to be a high performer in business. We can't tell you everything about Boot Camp, but expect a fast-paced, exhilarating

and intense learning experience. It could be your toughest test yet, which is exactly what will make it your biggest opportunity.

Find out more and apply online.
