| Your namedanyal khan                                                  |
| ID16277                                                               |
|                                                                       |
| Most common fracture bone in human body is?                           |
| a.Scapula                                                             |
| b.Clavicle                                                            |
| c.Both                                                                |
| d .None                                                               |
| 2. In surgical end of humerus is the common site of fracture?         |
| A. anatomical neck                                                    |
| b. surgical neck                                                      |
| c. both                                                               |
| d. none                                                               |
| 3. Radius is onside                                                   |
| A. lateral side                                                       |
| b. medial side                                                        |
| c.both                                                                |
| d.none                                                                |
| 4. Pectoralis major, teres major and latismiss dorsi are attached on? |
| A. bicipital groove                                                   |
| b. intertubercular groove                                             |
| c.both                                                                |
| d.none                                                                |
| 5. capitulum is a part of ?                                           |
| A. humerus                                                            |

| b.radius                                                                                                                                                                         |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| c.upper limb                                                                                                                                                                     |
| d.both A and c                                                                                                                                                                   |
| 6.shaft of humerous consists of surfaces?                                                                                                                                        |
| A3                                                                                                                                                                               |
| b.2                                                                                                                                                                              |
| c.5                                                                                                                                                                              |
| d.8                                                                                                                                                                              |
| 7. A 60 years old patient came to doctor and told him that he has a fall on outstretch hand and after that he has wrist pain and limited range of flexion, the patient may have? |
| A. colley's fracture                                                                                                                                                             |
| b.galazzi fracture                                                                                                                                                               |
| c.monteggia fracture                                                                                                                                                             |
| d.both a and c                                                                                                                                                                   |
| 8. A patient came to you and told you that he has a fall on back of hand, he may have the reverse of cooly's fracture which is?                                                  |
| A. smith's fracture                                                                                                                                                              |
| b.cooly's fracture                                                                                                                                                               |
| c.both                                                                                                                                                                           |
| d.none                                                                                                                                                                           |
| 9. The medial and lateral collateral ligament is present in?                                                                                                                     |
| A. Elbow joint                                                                                                                                                                   |
| b.shoulder joint                                                                                                                                                                 |
| c.both                                                                                                                                                                           |
