## FULL ADDER

AIM:
Design and verify the logic circuit of Half-subtractor using logic gate. OBJECTIVES:

- To understand the principle of binary addition.
- To understand full adder concept.
- Use truth table and Boolean Algebra theorems in simplifying a circuit design.
- To implement full adder circuit using logic gates. PROCEDURE:
- Collect the components necessary to accomplish this experiment.
- Plug the IC chip into the breadboard
- Connect the supply voltage and ground lines to the chips. PIN7 $=$ Ground and PIN14 $=+5 \mathrm{~V}$.
- According to the pin diagram of each IC mentioned above, make the connections according to circuit diagram.
- Connect the inputs of the gate to the input switches of the LED.
- Connect the output of the gate to the output LEDs.
- Once all connections have been done, turn on the power switch of the breadboard
- Operate the switches and fill in the truth table (Write " 1 " if LED is ON and " 0 " if LED is OFF
- Apply the various combination of inputs according to the truth table and observe the condition of Output LEDs.

## FULL ADDER:

Full adder is a logical circuit that performs an addition operation on three binary digits. The full adder produces a sum and carry value, which are both binary digits. It can be combined with other full adders or work on its own.

Observation table

| A | B | Carry -in | Sum | Carry-out |
| :--- | :--- | :--- | :--- | :--- |
| 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 1 | 1 | 0 |
| 0 | 1 | 0 | 1 | 0 |
| 0 | 1 | 1 | 0 | 1 |
| 1 | 0 | 0 | 1 | 0 |
| 1 | 0 | 1 | 0 | 1 |
| 1 | 1 | 0 | 0 | 1 |
| 1 | 1 | 1 | 1 | 1 |

RESULTS AND ANALYSIS:

Verified the truth table as follows. Full Adder: Verified the truth table of Full Adder as $\mathrm{S}=1$ i.e. LED which is connected to S terminal glows when inputs are $\mathrm{A}, \mathrm{B}, \mathrm{Ci}$ Verified the truth table of Full Adder as $\mathrm{Co}=1$ i.e. LED which is connected to Co terminal glows when inputs are $\mathrm{A}, \mathrm{B}, \mathrm{Co}$.

## CONCLUSION:

- To add two bits, we require one XOR gate (IC 7486) to generate Sum and one AND (IC 7408) to generate carry.
- To add three bits, we require two half adders.
