Answer the following Questions

Q1) A questionnaire is a tool to collect ----- unreliable.

Some points are shown us that how questionnaire may be inappropriate or unreliable because,

Some questionnaires have limited choices of answers because the Respondents may not explain their views fully. Some questionnaires are meaning less & unclear.

Sometimes our respondents may be children, Blind persons which may cause the questionnaire unreliable.

If we send questionnaire through social media or by mail so, we don't know

that who will fill the questionnaire the Respondent or another person.

In my opinion further I will discuss about my experience,

Once I was in Cafe 99 on job & I was an accountant & dealing with the social media. There I upload a questionnaire, then a random person comment he wrote against Cafe 99. on facebook, then I saw his profile "live in Dubai" then I contact with him about his comment & I realize that even he was not tasted Cafe 99's French fries. Then I was feel that these type of

Social media questionnaires are unreliable.

Q2) Attempt the following Questions:-

A) In your opinion -----
----- a research?

In my opinion it is very important to critical review a literature before conducting a research because the literature review is the base of any research. The literature review shows us the idea & topic of the research for the further research.

In literature review we first know about the our topic & idea then we study the past researches & derived information &

Collect data. After we become to know about the strength & weakness of the research. Then we should select authentic methods to conduct the literature & research & select appropriate resources & analytical techniques, for our work (Literature review).

The literature review plays important role to justify our research study. After that use the authentic Methodologies. & at the end we make conclusion to support our result, That is why it is important to critically review the literature before conducting the research.

In your opinion state any 5 mistakes - - - - - review.

The 5 mistakes that the researcher make while conducting the literature review are as follow.

LACK OF RESOURCES:-

When the researcher conduct the literature review, lack of resources is one of the other mistakes that where from the researcher collect the data from which research or from which reference. Textbooks or news paper is not appropriate source for a literature review.

2) Too short or Too descriptive:-
Some Times

The researcher write extra points in literature review which are meaning less which are too descriptive & sometimes the researcher write too short. Both are not appropriate for the literature review.

3) Research Questions:-

= = The researcher doing a mistake when he not discuss the link of the research questions. The researcher can't able to explain that where he find his answer of the research questions or what they tell about their topic, how they teach.

Un-grounded Statements:-
 When the researcher makes the literature review he mistakes when he provides his personal statement, so the reader judge that his statement is not truly appropriate because of un-grounded statement on his own experience.

Poor Literature Review:-
 The researchers makes the mistakes by overuse of jargon & pretentious language & the lack of the data & idea about his topic.

Q3) Explain the purpose of
research proposal? -----
----- proposal?

A

RESEARCH PROPOSAL:-

The main purpose of research proposal is to convince your research reader & justify your work & topic of your research / project & you have to prove that your topic is important about your research or project & will be successful & acceptable in future.

Develop a good Research Proposal:-

There are

number of basic steps to
conduct a good research
proposal. Which are as
follow

1) Defining & describing
the research topic.

2) Conduct that the purpose
of your research

3) Formulating the research
questions!

4) Using authentic methodologies.

5) Create research plan

6) Create conclusions to
identify your results.
