HACKING

WHAT IS HACKING ?

A computer hacker is a computer expert who uses their technical knowledge to achieve a certain goal, or overcome a certain obstacle, within a computerized system. Whilst the term "hacker" can refer to any skilled computer programmer, it has become associated in popular culture with a "security hacker". This is someone who utilizes their technical know-how of bugs or exploits to break into computer systems and access data which would otherwise be unavailable to them. Law enforcement agencies sometimes use hacking techniques in order to collect evidence on criminals and other malicious actors. This could include using anonymity tools (such as a VPN, or the dark web) to mask their identities online, posing as criminals themselves.^{[1][2]} Hacking and cyber-attacks have also been used by State actors as a means of warfare.

Representation in mainstream media

The mainstream media's current usage of the term may be traced back to the early 1980s. When the term was introduced to wider society by the mainstream media in 1983,^[4] even those in the computer community referred to computer intrusion as "hacking", although not as the exclusive definition of the word. In reaction to the increasing media use of the term exclusively with the criminal connotation, the computer community began to differentiate their terminology. Alternative terms such as "cracker" were coined in an effort to maintain the distinction between "hackers" within the legitimate programmer community and those performing computer break-ins. Further terms such as "black hat", "white hat" and "gray hat" developed when laws against breaking into computers came into effect, to distinguish criminal activities from those activities which were legal.
