Summary of Interpretivism

Interpretivism developed amongst researchers dissatisfied with the theories of which they considered too general and ill suited to select the meaningfulness and variable founded in human interaction, because the values and theoretical beliefs of research cannot be fully removed from their inquiry. Interpretivists believe research on human beings cannot yield objective results. Thus rather than seeking an objective perspective in research, interpretivists look for meaning in the subjective experiences of individual engaging in social interaction. Many interpretivist researchers immerse themselves in the social context they are

Summary of Positivism

A system that combines it self to the data of experiences and excludes a priori speculation, more narrowly the term designates the thought of French philosopher. That all knowledge regarding matters of facts is based on the positive data of experience. The beyond the realm of fact is that of pure logic and pure mathematics, these two methods are also recognized by that time of research. The positivist tradition stresses the importance of doing quantitative research surveys in order to get an overview of society as a whole and to uncover social structures such as the relationships

Educational achievement and social classes. This type of society shape the individual facts consist of social consist of social which exercise social which exercise civil people central over individual be explained by the social norms they have been exposed to through their socialisation, and their social class gender the ethnic background

The point of research is to uncover the laws that govern human behaviour. Just as scientific have discover the laws that govern physical world.

Require research to be valid reliable and representative objective and detachment. Trans correct generalisability. Scientific.
