**Child Labour:**

When a person below 15 years of age is doing work that is child labour. When child work as like adults this will deprive them of their childhood. And this kind of child have no lifestyle and not healthy. Today throughout the world **215** Million children are forced to work many are working full time. Who supports our families in adults age its called child labour.

**ISSUES:**

The problems is that these childrens are don't have a healthy life style. They don't go to school, and have absolutely no time play like all kids do. More than half of these children are exposed to terrible things Such as Hazardous Environment, Slavery. For us we can dream to the highest but for these children they can't even try and dream they have to focus on surviving through their struggle. Howe would you feel if you don't have the right to be a kid. No school, no health care, no food, no water.

**Causes:**

Child labour is caused by poverty, poor educational system, no rights, and limited prohibitions on child labour. Poverty and unemployment level are very high which means children rely on child labour because its the only way to get some income and so they can get basic necessities to live.

**Impacts on our society:**

Society are impact by this problem from high level. I consider child labour as a necessary evil. It will be never ending cycle if there is no change the cycle starts off like this. Family can't afford to send child to school, child forced to work, the child will grow up without basic skills, they will remain in a low paying and often dangerous workplace, the girl will mary at a young age and have a children's right away, now the mother have a number of children to support with little income. If we all come together we can stop child labour it all starts with one person. One person can change the word.
