Q. No 1 The data in the table are taken from a survey of the diet of 1368 men and 1540 women in total 2908 adults in a region of Pakistan. The numbers of men and women surveyed were divided, separately, into four equal parts on the basis of their vegetables consumption. These parts are shown in Q_1, Q_3, Q_2 and Q_4 . The mean consumption in grams per day is given for each food type in each other part for men and women separately. For example, the mean consumption of fruit by men who are the lowest amount of fresh vegetables is 31 grams per day. The columns headed SE give the standard errors of the food consumptions by all men and women.

a. Calculate the overall mean consumption of fresh vegetables. fruits, rice, fish and meat for men and women separately.

Q 1 Part 'B'

Describe in words what the figures for milk, root vegetables, wheat flour, consumption indicate.

The figure can be described in the following manner:

Q4 consume a mean grams of 7 for root vegetables in Men while in women in Q4 the Mean consumption of Root vegetables is 6 grams. In the similar way the other groups can be defined.

So for milk is concerned Q4 consume on the average 2 litre for man while one litre on the average is consumed by women.

In case of wheat flour, in men first portion i.e. Q1 consume 79 grams on the average while women in Q4 on the average consume 56 grams. Similarly rest of the portions can be summarized.

QNO1 Part "e"
 Men require, on average about 20% more food per day than women to maintain energy levels. Use this information to compare the consumption of the main food groups by men in Q1 and women in Q1. You are not required to consider whole grains, root vegetables or milk.

ANSWER:-

Men Q1	women Q1
79	180

It shows that in this case, men in Q1 use less than half of the quantity that is used by women in Q1, so we can say that the over use of 20% by men in this case is not happening rather men are under using.

Q1 Part C.

What distinctive pattern is there, for both men and women, in rice, fruit, and fish consumption across the four parts, Q4 to Q1?

ANSWER:-

Description

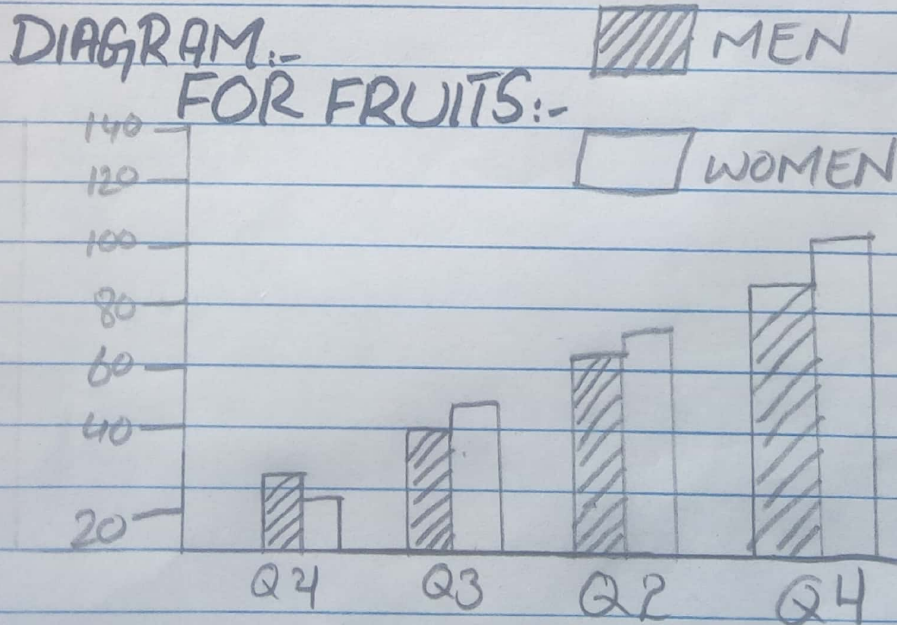

The figures given in the table indicate that in Men, the consumption of fruit is increasing from Q4 towards Q1 i.e. the Q4 is consuming the least amount of fruit while the Q1 is consuming the largest amount of fruit. Similarly in women i.e. the trend continues there as well. In fish consumption also, Q4 is consuming the least amount both in Men & women while Q1 is consuming the largest quantity. This trend of increase towards from Q4 towards Q1 is also evident.

mean consumption of wheat flour both in Men & women. However in rice, the trend is opposite i.e. Q4 is consuming towards Q1 in both Men and women.

QNO1 Part d.

Draw a suitable diagram to show the difference in consumption patterns of fish and fruits between men and women.

ANSWER:-

24

Day: MTWTF S

Date: / /

FOR FISH:-

Q NO: 1 Part "f"

Explain in your own words, ~~that the~~ what the standard deviation of the above commodities shows for men and women and which one show better result.

ANSWER:-

The standard variation for fresh vegetables and fruit consumption is less in men as compared to women. We know that lesser standard deviation is desired the most so in this case men are having better standard deviation than women.

In rice consumption, the SD standard deviation of women is lower than men hence women have better standard deviation.

Similarly in wheat flour, wheat grain, rest vegetables Men's ~~stan~~ standard deviation is higher than women while in Meat, Fish & Milk, the women standard.

deviation is higher than that of Men.

Q NO: 3

a)

Find A.M, G.M, H.M, Median, Mode, Quartiles, Percentiles, Range, M.D, Q.D, variance, Standard Deviation, Coefficient of variation, Skewness of the following data.

Rainfall (in cm)	No of year
20-24	1
25-29	3
30-34	5
35-39	8
40-44	5
45-49	2
50-54	0
55-59	1

Q- Find the following:-

First we prepare the following.

Ran: fall (inches)	f NO of year	x	fx	$f \log x$	f/x	class boundaries	CF
20-24	1	22	22	1.342	0.045	19.5-24.5	1
25-29	3	27	21	4.294	0.111	24.5-29.5	4
30-34	5	32	160	7.525	0.156	29.5-34.5	9
35-39	8	37	296	12.545	0.216	34.5-39.5	17
40-44	5	42	210	8.116	0.119	39.5-44.5	22
45-49	2	47	94	3.344	0.042	44.5-49.5	24
50-54	0	52	0	8.344	0	49.5-54.5	24
55-59	1	57	57	1.755	0.017	54.5-59.5	25
-	25	-	920	38.921	0.767		

$$A.M = \bar{x} = \frac{\sum fx}{\sum f}$$

Putting the values

$$A.M = \bar{x} = \frac{920}{25}$$

$$A.M = \bar{x} = 36.8 \text{ Ans.}$$

$$G.M = \text{Antilog} \left(\frac{\sum f \log x}{\sum f} \right)$$

putting the values
in the given formula.

$$G.M = \text{Antilog} \left(\frac{38.921}{25} \right)$$

$$G.M = \text{Antilog} (1.556)$$

$$G.M = 0.442 \text{ Ans.}$$

$$H.M = \frac{\sum f}{\sum f/x}$$

putting the values

$$H.M = \frac{25}{0.70795}$$

$$H.M = 35.313 \text{ Ans.}$$

$$\text{Median} = l + \frac{h}{f} \left(\frac{\sum f}{2} - c \right)$$

putting values from the
above table

from the above table the

Median class.

$$\text{Median class} = \frac{26}{2} = 13^{\text{th}} \text{ values}$$

$$\text{Median class} = (34.5 - 39.5)$$

$$l = 34.5, h = 5, c = 9$$

$$\text{Median} = 34.5 + \frac{5}{8} \left(\frac{25 - 9}{2} \right)$$

$$\text{Median} = 34.5 + 0.625(12.5 - 9)$$

$$\text{Median} = 34.5 + 2.187$$

$$\text{Median} = 36.68 \text{ Ans.}$$

No \leftarrow we find Mode \rightarrow

$$\text{Mode} = \frac{l_1 + f_m - f_0}{2f_m - f_0 - f_1} \times h$$

Now we find Mode.

$$\text{Mode} = \frac{f_i + f_m - f_o}{2f_m - f_o - f_i} \times h$$

Rainfall (inches)	f	class boundaries
20-24	1	19.5-24.5
25-29	3	24.5-29.5
30-34	5	29.5-34.5
<u>35-39</u>	<u>8</u>	<u>34.5-39.5</u>
40-44	5	39.5-44.5
45-49	2	44.5-49.5
50-54	0	49.5-54.5
55-59	1	54.5-59.5
	25	

By inspecting method we choose (34.5-39.5) as modal class because it has maximum frequency. Therefore putting values in formula.

(32)

Day. MTWTF S

Date. / /

$$\text{Mode} = \frac{34.5 + 8 - 5}{2(8) - 5 - 5} \times h$$

$$\text{Mode} = 34.5 + \frac{3}{6}$$

$$\text{Mode} = 34.5 + \frac{3}{6} \times 5$$

$$\text{Mode} = 37 \text{ Ans.}$$

Quartiles.

Rainfall inches	f	classboundries	cf
20-24	1	19.5 - 24.5	1
24.5-29	3	24.5 - 29.5	4
29-34	5	29.5 - 34.5	9
35-39	8	34.5 - 39.5	17
40-44	5	39.5 - 44.5	22
45-49	2	44.5 - 49.5	24
49.5-54	0	49.5 - 54.5	24
55-59	1	54.5 - 59.5	25

Bayer Paper Product

Checked By: Parents: Excellent Good Need Improvement

25

$\Sigma f = 25$ is odd

$$Q_1 = \left(\frac{\Sigma f + 1}{4} \right)^{\text{th}} \text{ value}$$

$$Q_1 = \left(\frac{25 + 1}{4} \right)^{\text{th}} \text{ value}$$

$$Q_1 = 6.5^{\text{th}} \text{ values}$$

So Q_1 lies in group (34.5 - 39.5)

$$Q_1 = li + \frac{h}{f} \left(\frac{\Sigma f}{2} - c \right)$$

$$Q_1 = 34.5 + \frac{5}{8} (25 - 9)$$

$$Q_1 = 34.5 + 10$$

$$Q_1 = 44.5 \text{ Ans.}$$

Mean deviation

Mean deviation from Mean

$$M.D = \frac{\sum f |x - \bar{x}|}{\sum f}$$

where $\bar{x} = \frac{\sum fx}{\sum f}$

Now the necessary calculation is as.

Rainfall (inches)	f	C.B	x	f(x - \bar{x})	cf
20-24	1	19.5-24.5	22	-14.8	1
25-29	3	24.5-29.5	27	-20.4	4
		29.5-34.5	32	-24	9
30-34	5	34.5-39.5			
35-39	8	34.5-39.5 39.5-44.5	37	1.6	17
40-44	5	39.5-44.5 44.5-49.5	42	2.6	(22)
45-49	2	44.5-49.5	47	20.4	24
50-54	0	49.5-54.5	52	0	24
55-59	1	54.5-59.5	57	20.2	25
				1.6	

We have already calculated
 $\bar{x} = 36.8$

$$M.D = \frac{1.6}{25}$$

$$M.D = 0.064$$

Range

$$\text{Range} = X_1 - X_5$$

$$\text{Range} = 59 - 20$$

$$\text{Range} = 39 \text{ Ans.}$$

Q.D

$$Q.D = \frac{Q_3 - Q_1}{Q_3 + Q_1} \quad Q_3 = 3 \left(\frac{N+1}{4} \right)^{\text{th}}$$

it means Q_3 lies in (39.5 - 44.5) group

$$Q_3 = 3 \left(\frac{25+1}{4} \right)$$

$$Q_3 = 19.5^{\text{th}}$$

gt mean Q_3 lies

36

Day: MTWTF S

Date: / /

$$Q_3 = \frac{h}{f} \left(\frac{3f}{4} - C \right)$$

$$Q_3 = \frac{5}{5} \left(\frac{3 \times 25}{4} - 22 \right)$$

$$Q_3 = 36 - 25$$

putting the values in formula

$$QD = \frac{Q_3 - Q_1}{Q_3 + Q_1}$$

$$QD = \frac{36 - 25}{36 + 25}$$

$$QD = \frac{-8.25}{80.75}$$

$$QD = 0.102 \text{ Ans.}$$

Standard deviation

$$S = \sqrt{\frac{\sum fx^2}{\sum f} - \left(\frac{\sum fx}{\sum f}\right)^2}$$

Now we prepare the necessary calculation.

Rainfall class	f	x	fx	fx ²
20-24	1	22	22	484
25-29	3	27	81	2157
30-34	5	32	160	5320
35-49	8	37	296	50
40-44	8	42	210	1920
45-49	2	47	94	408
50-54	0	52	0	0
55-59	1	57	57	3249
	25		920	35230

putting values in formula

$$S = \sqrt{\frac{35230}{25} - \left(\frac{920}{25}\right)^2}$$

$$S = \sqrt{1409.2 - (36.8)^2}$$

$$S = \sqrt{54.96}$$

$$S = 7.41 \text{ Ans.}$$

←—————→

Variance

$$S^2 = \frac{\sum fx^2}{\sum f} - \left(\frac{\sum fx}{\sum f} \right)^2$$

putting the values

$$S^2 = \frac{359230}{25} - \left(\frac{920}{25} \right)^2$$

$$S^2 = 1409.2 - (36.8)^2$$

$$S^2 = 54.96 \text{ Ans.}$$

←—————→

Coefficient variation

$$CV = \frac{S}{\bar{X}} \times 100$$

As we have already
calculated.

$$\text{As } S = 7.41, \bar{X} = 36.8$$

So

$$CV = \frac{S}{\bar{X}} \times 100$$

Putting the values

$$CV = \frac{7.41}{36.8} \times 100$$

$$CV = 20.13 \text{ Ans.}$$

Skewness:-

Skewness can be measured by any formula of the three formula listing below

- i- skewness by moment ratio
- ii- skewness by Pearson's coefficient
- iii- skewness by Bowley method

But here we find skewness through Karl Pearson's method.

$$SK = \frac{3(\text{Mean} - \text{Median})}{S}$$

But we have already calculated
 Mean = 36.8, Median = 36.68,
 S = 7.41

putting the values in the above formula

$$SK = \frac{3(36.8 - 36.68)}{7.41}$$

$$SK = -0.0485 \text{ Ans.}$$

Decile

$$D_{10} = 8 \left(\frac{\sum f + 1}{10} \right)^{\text{th}} \text{ values}$$

$$D^{10} = 8 \left(\frac{25 + 1}{10} \right)^{\text{th}} \text{ values}$$

$$D^{10} = 20.8^{\text{th}} \text{ values.}$$

Rainfall	f	C.B	cf
20-24	1	19.5-24.5	1
25-29	3	24.5-29.5	4
30-34	5	29.5-34.5	9
35-39	8	34.5-39.5	17
40-44	5	39.5-44.5	22
45-49	2	44.5-49.5	24
50-54	0	49.5-54.5	24

QNO. 2

In the United Kingdom there has been a national census.

every 10 years since 1801 (with the exception of 1941). At the time of the 2011 UK census - - - - ?

PART A:-

Describe the purpose of census.

ANSWER

PURPOSE OF CENSUS:-

The word census is derived from the Latin word 'censere' which become "census" in English.

Census means "official counting".

A census aims to count the entire population of a country and at the location where each person usually lives. The census ask questions of people in homes and group living situations including how many people live or stay in each home, and the

sex, age and race of each person.

A census is the procedure of systematically acquiring and recording information.

Q NO: 2 Part b.

Explaining how it differs from a sample survey and from routine collected of data by government agencies.

ANSWER:-

DIFFER FROM SAMPLE SURVEY:-

In the sample survey we go through some of the selected part from the population. The concern is about the information is totally base on the selected data. This procedure is done by government agencies, they give the data by picking some selected part part of the population but in census procedure.

it is compulsory to go through from the every object of the population. that is why census is differs from sample survey.

Q2 Part C.

The 2011 UK census attracted a response data of about 94% of the population. Discuss whether or not that is a problem from the accuracy of the census.

ANSWER:-

From the given information 2011 UK census attracted a response rate of 94% that is good. But it can rise any error or may increase error further. Because the census procedure were not performed in the correct way that why the error occur in the counting of population.

QNO: 2 Part d.

In the 2011 UK census, almost 17000 people stated their religion as 'Jedi knight'. (Jedi knights are characters in the 'star wars' films.)

ANSWER:-

In the census about + asking specific religion from each object or group may use its harsh behaviour or many mishappen. It is the possible that some one so not like to answer of these kinds of questions they will ask these questions indival for each object or person,

Date: / /

QNO: 2

Part: e

Discuss the potential problems in conducting the 2021 UK census online, and Explain how these problems might be overcome.

ANSWER:-

There is a lot of potential problem in conducting the 2021 UK census online. There is a first main issue is that the availability of online connection and internet to every person of the country is almost impossible. because in every where is not available the net connection.

The second thing that also can increase is the personal behaviour of persons. If the personal behaviour of the person is good then they will conduct the good census from the

(60)

Day: MTWTF S

Date: / /

from people.

The only way to overcome this problem is to give the connection to the whole country. They will make sure and punctual to every person to give the response. They will important to give response to census who census.

QNO: 2 Part f:-

Discuss the potential problems in incorporating additional data held by government agencies.

ANSWER:-

The census, itself mean the study of every object under the observation. And that is real such a difficult task to do. This is also quite difficult to Government agencies to go to every single person and collect the whole lot of data/ things that have been done by these agencies.
