## Question No. 1:

a. Explain Part of Speech Tagging (POS) and explain POS tag ambiguity with two examples.

## ANSWER

## > POS Tagging:

It is a process of converting a sentence to forms - list of words, list of tuples (where each tuple is having a form (word, tag)). The tag in case of is a part-ofspeech tag, and signifies whether the word is a noun, adjective, verb, and so on.
Default tagging: is a basic step for the part-of-speech tagging. It is performed using the
Default Tagger class. The Default Tagger class takes 'tag' as a single argument. NN is the tag for a singular noun. Default Tagger is most useful when it gets to work with most common part-of-speech tag. That's why a noun tag is recommended.

## $>$ POS tag ambiguity:

Common parts of speech in English are noun, verb, adjective, adverb, etc. The POS tagging problem is to determine the POS tag for a particular instance of a word. The main problem with POS tagging is ambiguity.

## - For Example

 POS Tag AmbiguityIn English : I bank ${ }_{1}$ on the bank ${ }_{2}$ on the river bank ${ }_{3}$ for my transactions.

Bank ${ }_{1}$ is verb, the other two banks are noun
b. State difference between open vs. closed classes.

## ANSWER <br> > OPEN CLASS (CONTENT/LEXICAL)

- Lexical words deal with content and vocabulary.
- They have concrete meaning that goes beyond their function in a sentence.

## > CLOSED CLASS (Grammatical/Function)

- Grammatical words deal with the formation of sentences.
- They have ambiguous meaning and serve to express grammatical relationships with other words within a sentence.
c. Apply Viterbi Algorithm on the below given bigram and lexical probabilities

| Initial <br> Probabilities |  |
| :--- | :--- |
| Noun | $1 \backslash 3$ |
| Verb | 0 |
| Other | $1 \backslash 3$ |

| Bigram Probabilities |  |  |  |
| :--- | :--- | :--- | :--- |
|  | Noun | Verb | Other |
| Noun | $1 \backslash 4$ | $1 \backslash 4$ | 0 |
| Verb | $1 \backslash 4$ | 0 | $1 \backslash 4$ |
| Other | $1 \backslash 3$ | 0 | $1 \backslash 3$ |

| Lexical Probabilities |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :---: |
|  | O1=time | O2=flies | O3=like | O4=an | O5=arrow |  |
| Noun | $1 \backslash 5$ | $1 \backslash 5$ | 0 | 0 | $1 \backslash 5$ |  |
| Verb | $1 \backslash 5$ | $2 \backslash 5$ | $1 \backslash 5$ | 0 | 0 |  |
| Other | 0 | 0 | $1 \backslash 5$ | $2 \backslash 5$ | 0 |  |

## ANSWER

| hi | P1(h1) | P2(h2) | P3(h3) | P4(h4) | P5(h5) |
| :--- | :--- | :--- | :--- | :--- | :--- |
| noun | $1 / 3 \times 1 / 5=1 / 15$ | $1 / 5 \times 1 / 4 \times 1 / 15=1 / 300$ | $0 \times 1 / 150=0$ | 0 | $1 / 5 \times 1 / 4 \times 1 / 16$ |

|  |  |  |  |  | 875 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| verb | 0 | $2 / 5 \times 1 / 4 \times 1 / 15=1 / 150$ | $1 / 5 \times 1 / 4 \times 1 / 150=1 / 3000$ | 0 | 0 |
| other | 0 | 0 | $1 / 5 \times 1 / 3 \times 1 / 150=1 / 2250$ | $1 / 3 \times 2 / 5 \times 1 / 2250=1 / 16875$ | 0 |

## Question No. 2:

Apply Bayesian theorem over the below given string:
$\wedge J o h n$ got many NLP books. ${ }^{\wedge} \mathrm{He}$ found them all very interesting.
Where for lexical probabilities assume John $=0.5$, got $=0.3$, many $=0.2, \mathrm{NLP}=0.1$ and books $=0$.

## ANSWER

## POS Tags:

^N V A N N. ^ N V N ARA.
Recording Numbers:

|  | ^ | N | V | A | R | . |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

| $\boldsymbol{\Lambda}$ | 0 | 2 | 0 | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{N}$ | 0 | 1 | 2 | 1 | 0 | 1 |
| $\mathbf{V}$ | 0 | 1 | 0 | 1 | 0 | 0 |
| $\mathbf{A}$ | 0 | 1 | 0 | 0 | 1 | 1 |
| $\mathbf{R}$ | 0 | 0 | 0 | 1 | 0 | 0 |
| $\mathbf{}$ | 1 | 0 | 0 | 0 | 0 | 0 |

## Bigram Probability:

|  | $\boldsymbol{\wedge}$ | $\mathbf{N}$ | $\mathbf{V}$ | $\mathbf{A}$ | $\mathbf{R}$ | $\mathbf{.}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\boldsymbol{\wedge}$ | 0 | 1 | 0 | 0 | 0 | 0 |
| $\mathbf{N}$ | 0 | $1 / 5$ | $2 / 5$ | $1 / 5$ | 0 | $1 / 5$ |
| $\mathbf{V}$ | 0 | $1 / 2$ | 0 | $1 / 2$ | 0 | 0 |
| $\mathbf{A}$ | 0 | $1 / 3$ | 0 | 0 | $1 / 3$ | $1 / 3$ |
| $\mathbf{R}$ | 0 | 0 | 0 | 1 | 0 | 0 |
| . | $\mathbf{l}$ | 0 | 0 | 0 | 0 | 0 |

Where lexical probability is given i.e. John=0.5, got=0.3, many=0.2, NLP=0.1 and books=0.
