

**IQRA NATIONAL UNIVERSITY PESHAWAR**

**DEPTT. B.E. (ELECTRICAL)**

**8<sup>TH</sup> SEMESTER**

**SPRING 2020**

**FINAL TERM EXAMINATION**

**DATA STRUCTURE AND ALGORITHMS**

**NAME : ABDUL MATEEN**

**ID : 13009**

**INSTRUCTOR:**  
MUHAMMAD ADIL ASST. PROF

**DATE OF SUBMISSION:**  
24 / JUNE / 2020

• **Attempt All Tasks.**

**Q#1. (a) Sort the given list using Insertion Sort.**

**(10)**

56, 59, 45, 40, 43, 55

**Solution:**

**Dry Steps:**

1. For  $j \leftarrow 2$  to  $n$  (start of outer-for-loop)
2.  $key \leftarrow A[j]$  (temporary value)
3.  $i \leftarrow j - 1$  (counter use for while loop)
4. while (  $i \geq 1$  ) AND (  $A[i] \geq key$  ) (start of inner-while-loop)
  - a.  $A[i + 1] \leftarrow A[i]$
  - b.  $i \leftarrow i - 1$

end of inner-while-loop

5.  $A[i + 1] \leftarrow key$
6. Exit

---

**Step # 1:** for  $j \leftarrow 2$  to 6

**Step # 2:**  $key \leftarrow A[j]$   
 $key \leftarrow A[2]$   
 $key \leftarrow 59$

**Step # 3:**  $i \leftarrow j - 1$   
 $i \leftarrow 2 - 1$   
 $i \leftarrow 1$

**Step # 4:** while (  $i \geq 1$  ) AND (  $A[i] \geq key$  ) (start of inner-while-loop)  
 $(1 \geq 1)$  //condition is true  
AND  
 $(A[1] \geq 59)$   
 $(56 \geq 59)$  //condition is false

So, while loop gets terminated

end of inner while loop

**Step # 5:**  $A[i + 1] \leftarrow key$   
 $A[1 + 1] \leftarrow key$   
 $A[2] \leftarrow 59$

**56, 59, 45, 40, 43, 55**

---

**Step # 1:** for  $j \leftarrow 3$

**Step # 2:** key  $\leftarrow A[j]$   
key  $\leftarrow A[3]$   
key  $\leftarrow 45$

**Step # 3:**  $i \leftarrow j - 1$   
 $i \leftarrow 3 - 1$   
 $i \leftarrow 2$

**Step # 4:** while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  ) (start of inner-while-loop)

(  $2 \geq 1$  ) //condition is true

AND

(  $A[2] \geq 45$  )

(  $59 \geq 45$  ) //condition is true

So, while loop gets executed

a)  $A[i + 1] \leftarrow A[i]$

$A[2+1] \leftarrow A[2]$

$A[3] \leftarrow A[2]$

**56, 59, 59, 40, 43, 55**

b)  $i \leftarrow i - 1$

$i \leftarrow 2 - 1$

$i \leftarrow 1$

again go to check while loop condition

while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )

(  $1 \geq 1$  ) //condition is true

AND

(  $A[1] \geq 45$  )

(  $56 \geq 45$  ) //condition is true

So, while loop gets executed

a)  $A[i + 1] \leftarrow A[i]$

$A[1+1] \leftarrow A[1]$

$A[2] \leftarrow A[1]$

**56, 56, 59, 40, 43, 55**

b)  $i \leftarrow i - 1$

$i \leftarrow 1 - 1$

$i \leftarrow 0$

again go to check while loop condition

while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )            (start of inner-while-loop)

(  $0 \geq 1$  )                            //condition is false

So, while loop gets terminated

end of inner while loop

**Step # 5:**     $A[i + 1] \leftarrow \text{key}$

$A[0 + 1] \leftarrow \text{key}$

$A[1] \leftarrow 45$

**45, 56, 59, 40, 43, 55**

**Step # 1:**    for  $j \leftarrow 4$

**Step # 2:**     $\text{key} \leftarrow A[j]$

$\text{key} \leftarrow A[4]$

$\text{key} \leftarrow 40$

**Step # 3:**     $i \leftarrow j - 1$

$i \leftarrow 4 - 1$

$i \leftarrow 3$

**Step # 4:**    while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )            (start of inner-while-loop)

(  $3 \geq 1$  )                            //condition is true

AND

(  $A[3] \geq 40$  )

(  $59 > 40$  )                            //condition is true

So, while loop gets executed

a)  $A[i + 1] \leftarrow A[i]$

$A[3+1] \leftarrow A[3]$

$A[4] \leftarrow A[3]$

**45, 56, 59, 59, 43, 55**

b)  $i \leftarrow i - 1$

$i \leftarrow 3 - 1$

$i \leftarrow 2$

again go to check while loop condition

while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )

(  $2 \geq 1$  ) //condition is true

AND

(  $A[2] \geq 40$  )

(  $56 \geq 40$  ) //condition is true

So, while loop gets executed

a)  $A[i + 1] \leftarrow A[i]$

$A[2+1] \leftarrow A[2]$

$A[3] \leftarrow A[2]$

**45, 56, 56, 59, 43, 55**

b)  $i \leftarrow i - 1$

$i \leftarrow 2 - 1$

$i \leftarrow 1$

again go to check while loop condition

while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )

(  $1 \geq 1$  ) //condition is true

AND

(  $A[1] \geq 40$  )

(  $45 \geq 40$  ) //condition is true

So, while loop gets executed

a)  $A[i + 1] \leftarrow A[i]$

$A[1+1] \leftarrow A[1]$

$A[2] \leftarrow A[1]$

**45, 45, 56, 59, 43, 55**

b)  $i \leftarrow i - 1$

$i \leftarrow 1 - 1$

$i \leftarrow 0$

again go to check while loop condition

while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )            (start of inner-while-loop)

(  $0 \geq 1$  )                            *//condition is false*

So, while loop gets terminated

end of inner while loop

**Step # 5:**     $A[i + 1] \leftarrow \text{key}$

$A[0 + 1] \leftarrow \text{key}$

$A[1] \leftarrow 40$

**40, 45, 56, 59, 43, 55**

Again go to check for loop condition

**Step # 1:**    for  $j \leftarrow 5$

**Step # 2:**     $\text{key} \leftarrow A[j]$

$\text{key} \leftarrow A[5]$

$\text{key} \leftarrow 43$

**Step # 3:**     $i \leftarrow j - 1$

$i \leftarrow 5 - 1$

$i \leftarrow 4$

**Step # 4:**    while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )            (start of inner-while-loop)

(  $4 \geq 1$  )                            *//condition is true*

AND

(  $A[4] \geq 43$  )

(  $59 > 43$  )                            *//condition is true*

So, while loop gets executed

a)  $A[i + 1] \leftarrow A[i]$

$A[4+1] \leftarrow A[4]$

$A[5] \leftarrow A[4]$

**40, 45, 56, 59, 59, 55**

b)  $i \leftarrow i - 1$

$i \leftarrow 4 - 1$

$i \leftarrow 3$

again go to check while loop condition

while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )

(  $3 \geq 1$  ) //condition is true

AND

(  $A[3] \geq 43$  )

(  $56 \geq 43$  ) //condition is true

So, while loop gets executed

a)  $A[i + 1] \leftarrow A[i]$

$A[3+1] \leftarrow A[3]$

$A[4] \leftarrow A[3]$

**40, 45, 56, 56, 59, 55**

b)  $i \leftarrow i - 1$

$i \leftarrow 3 - 1$

$i \leftarrow 2$

again go to check while loop condition

while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )

(  $2 \geq 1$  ) //condition is true

AND

(  $A[2] \geq 43$  )

(  $45 \geq 43$  ) //condition is true

So, while loop gets executed

a)  $A[i + 1] \leftarrow A[i]$

$A[2+1] \leftarrow A[2]$

$A[3] \leftarrow A[2]$

**40, 45, 45, 56, 59, 55**

b)  $i \leftarrow i - 1$

$i \leftarrow 2 - 1$

$i \leftarrow 1$

again go to check while loop condition

while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )

(  $1 \geq 1$  )                    //condition is true

AND

(  $A[1] \geq 43$  )

(  $40 \geq 40$  )                    //condition is false

So, while loop gets terminated

end of inner while loop

**Step # 5:**     $A[i + 1] \leftarrow \text{key}$

$A[1 + 1] \leftarrow \text{key}$

$A[2] \leftarrow 43$

**40, 43, 45, 56, 59, 55**

Again go to check for loop condition

**Step # 1:**    for  $j \leftarrow 6$

**Step # 2:**     $\text{key} \leftarrow A[j]$

$\text{key} \leftarrow A[6]$

$\text{key} \leftarrow 55$

**Step # 3:**     $i \leftarrow j - 1$

$i \leftarrow 6 - 1$

$i \leftarrow 5$

**Step # 4:**    while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )                    (start of inner-while-loop)

(  $5 \geq 1$  )                    //condition is true

AND

(  $A[5] \geq 55$  )

(  $59 \geq 55$  )                    //condition is true

So, while loop gets executed

a)  $A[i + 1] \leftarrow A[i]$

$A[5+1] \leftarrow A[5]$

$A[6] \leftarrow A[5]$

**40, 43, 45, 56, 59, 59**

b)  $i \leftarrow i - 1$

$i \leftarrow 5 - 1$

$i \leftarrow 4$

again go to check while loop condition

while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )

(  $4 \geq 1$  ) //condition is true

AND

(  $A[4] \geq 55$  )

(  $56 \geq 55$  ) //condition is true

So, while loop gets executed

a)  $A[i + 1] \leftarrow A[i]$

$A[4+1] \leftarrow A[4]$

$A[5] \leftarrow A[4]$

**40, 43, 45, 56, 56, 59**

b)  $i \leftarrow i - 1$

$i \leftarrow 4 - 1$

$i \leftarrow 3$

again go to check while loop condition

while (  $i \geq 1$  ) AND (  $A[i] \geq \text{key}$  )

(  $3 \geq 1$  ) //condition is true

AND

(  $A[3] \geq 55$  )

(  $45 \geq 55$  ) //condition is false

So, while loop gets terminated

end of inner while loop

**Step # 5:**  $A[i + 1] \leftarrow key$

$A[3 + 1] \leftarrow key$

$A[4] \leftarrow 55$

**40, 43, 45, 55, 56, 59**

Again go to check for loop condition

$j \leftarrow 7$  to 6 // condition is false

so for loop also gets terminated

**program will exit here**

**Q#2. Construct Binary Trees from given list of numbers and then verify the tree. (10)**

25, 15, 35, 17, 33, 36, 25, 13, 15, 40, 38, 42, 20

**Verification using In-order-traversal:**

42, 40, 38, 36, 35, 33, 25, 25, 20, 17, 15, 15, 13

**Q#3. Construct Binary Trees from given Mathematical Expressions:**

i.  $H + G * 2 - (F \wedge M)$

(05)

ii.  $A * D + T \wedge B - R$

(05)

**Q#4. Apply all the three Binary Tree Traversal Techniques on each of the Tree constructed in Q#3. (06 + 06)**

i.  $H + G * 2 - (F \wedge M)$

**a. In-Order-Traversal:**

- Visit left-sub tree
- Process Parent node
- Visit right-sub tree

**H, +, G, \*, 2, -, F, ^, M**

**b. Pre-Order-Traversal:**

- Process parent node
- Visit left-sub tree
- Visit right-sub tree

**+, H, -, \*, G, 2, ^, F, M**

**c. Post-Order-Traversal:**

- Visit left-sub tree
- Visit right-sub tree
- Process parent node

**H, G, 2, \*, F, M, ^, -, +**

ii.  $A * D + T ^ B - R$

**a. In-Order-Traversal:**

- Visit left-sub tree
- Process Parent node
- Visit right-sub tree

**A, \*, D, +, T, ^, B, -, R**

**b. Pre-Order-Traversal:**

- Process parent node
- Visit left-sub tree
- Visit right-sub tree

**+, \*, A, D, -, ^, T, B, R**

**c. Post-Order-Traversal:**

- Visit left-sub tree
- Visit right-sub tree
- Process parent node

**A, D, \*, T, B, ^, R, -, +**

**Q#5. Fill in the blanks.**

**(08)**

- i. Elements of a Tree are called **nodes**.
- ii. The graphical line drawn between Nodes of a Tree is called **edge**.
- iii. Level Number of a Root is **zero**.
- iv. All the nodes with same Level Number belong to **same generation**.
- v. The Left-Most Child Node is **oldest brother** Node.
- vi. The Right-Most Child Node is **youngest brother** Node.
- vii. A Tree is a **non-linear** Data Structure.
- viii. An Ordered Set of Ordered Trees is called a **forest**.
