The screenshot shows a SQL Server Enterprise Manager interface. The top window is titled "SQLQuery1.sql - HP...P Computers s (52))" and contains the following SQL code:

```
create table mk
(
customer_id int primary key ,
customer_name varchar (15),
addres varchar (10),
order_no int
)
insert into mk values (14974 , ' Salman khan ' , 'Sawat ' , 22)
select *from mk
```

Below the query window, there is a "Results" tab showing a table with 5 rows and 4 columns: customer\_id, customer\_name, addres, and order\_no. The first row is highlighted, showing the values inserted by the query.

	customer_id	customer_name	addres	order_no
1	14974	Salman khan	Sawat	22
2	22222	Ahmad ali	Islamabad	10
3	32111	Arsalan	Rawlapindi	50
4	44223	Sana ullah	peshawar	9
5	44444	javeed	kohat	5
