Task #1

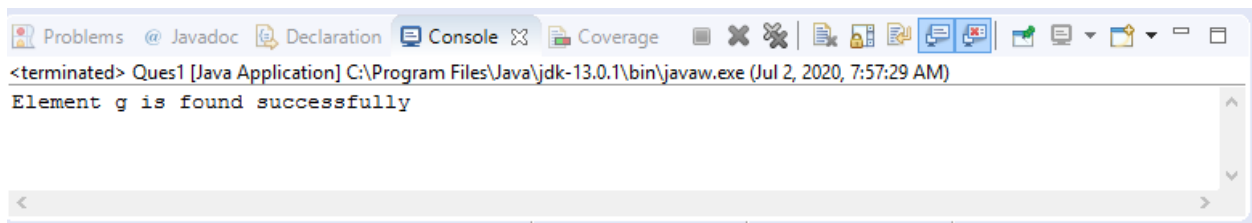

Design a linear array B [] of size 7 elements. Put the following elements in it. s, u, g, a, z, e, y a. Implement the Linear Search Algorithm on it to find “g” and display the message Element g is found successfully b. Search for element “m” and message should be displayed Search is Unsuccessful

Answer:

Program:

```
public class Ques1 {
    public static void main (String[] args) {
        char b[] = {'s','u','g','a','z','e','y' };
        boolean found = false;
        int i = 1;
        int max = 6;
        char item='g';
        while (i<=max && found==false)
        {
            if(b[i]==item)
            {
                found=true;
            }
            else
            {
                i++;
            }
        }
        if(found==true)
        {
            System.out.println("Element g is found successfully");
        }
        else {
            System.out.println("search is unsuccessfull");
        }
    }
}
```

Output:

The screenshot shows a Java IDE console window with the following text:

```
<terminated> Ques1 [Java Application] C:\Program Files\Java\jdk-13.0.1\bin\javaw.exe (Jul 2, 2020, 7:57:29 AM)
Element g is found successfully
```

Task# 2

Suppose there is a list of 6 unsorted elements. 15, 10, 12, 11, 9, 10

Design a Program to create an array A [] and store this list in it, and then apply Insertion Sort Algorithm to Sort the list.

ANSWER:

DATA:

15, 10, 12, 11, 9, 10 (unsorted lists)

Program:

```
using namespace std;
```

```
/* Function to sort an array using insertion sort*/
```

```
void insertionSort(int arr[], int n)
```

```
{
```

```
    int i, key, j;
```

```
    for (i = 1; i < n; i++)
```

```
    {
```

```
        key = arr[i];
```

```
        j = i - 1;
```

```
        /* Move elements of arr[0..i-1], that are
```

```
        greater than key, to one position ahead
```

```
        of their current position */
```

```
        while (j >= 0 && arr[j] > key)
```

```
        {
```

```
            arr[j + 1] = arr[j];
```

```
            j = j - 1;
```

```
    }  
    arr[j + 1] = key;  
  }  
}  
  
// A utility function to print an array of size n  
void printArray(int arr[], int n)  
{  
    int i;  
    for (i = 0; i < n; i++)  
        cout << arr[i] << " ";  
    cout << endl;  
}  
  
/* Driver code */  
int main()  
{  
    int arr[] = { 12, 11, 13, 5, 6 };  
    int n = sizeof(arr) / sizeof(arr[0]);  
  
    insertionSort(arr, n);  
    printArray(arr, n);  
  
    return 0;  
}
```

OUTPUT:

A screenshot of a Windows command prompt window. The title bar shows the file path "C:\Users\dell\Desktop\lab1.exe". The window content displays the following text: "Sorted Array: 9 10 10 11 12 15", a line of dashes "-----", "Process exited after 0.6438 seconds with return value 0", and "Press any key to continue . . .". The rest of the window is black.

```
C:\Users\dell\Desktop\lab1.exe
Sorted Array: 9 10 10 11 12 15
-----
Process exited after 0.6438 seconds with return value 0
Press any key to continue . . .
```
