

Name

Zeeshan Haider

ID # 13632

Program # Bs (DIT)

Sem # 6th

Assis # Maxillofacial

Mem # Natasha

## MIRRORS :

Stainless Steel mouth.  
real surface front surface.

## Sinus Lift Instrument.

used during sinus lift procedures to separate / reflect the Schneiderian membrane from the maxillary bone.

## Syringes:

used to deliver local anesthetic.

## Tissue Forceps :

used to grasp and stabilize soft tissue.

## Tissue Nippers:

compact sharp nippers with smooth action for accentuation interproximal gingival contour during soft tissue surgery.

## Scissors's

Extensive line of Scissors used for trimming tissue or cutting 'Sutures.

## Scalpels's

Blade handles and blade removers used for cutting gingival tissue and making surgical incisions.

## Root tip Picks's

Delicate instruments for the removal of root tips in difficult to reach areas.

## Rongeurs's

used for trimming and recontouring alveolar bone and gross tissue removal.

## Retractors, Mouth Props and Gags:

used to hold mucoperiosteal flaps, cheeks, lips and tongue away from the surgical area.

## Periotomes:

Thin sharp blades used to facilitate the removal of teeth with minimal damage to the surrounding alveolar bone.

## Periosteels:

For reflecting and retracting the mucoperiosteum.

## Osteotomes:

used for cutting or preparing bone.

## Needle Holders:

used to grasp and guide the needle when suturing.

## Mallets:

used with a chisel to split teeth and for remove bone.

## Knives:

useful for incisions that remove or recontour soft tissue and to excise interproximal tissue.

## Implant Probes:

used to screen periodontal pocket depth prior to definitive probing and procedures.

## Hemostats.

A multipurpose instrument used to clamp off blood vessel. remove small root tips and grasp loose objects.

## Grafting instruments:

instrument used during grafting procedures.

## Gauze Packers:

used to pack gauze at the restoration site.

## Forceps:

Full line of deep reaching and apical extraction forceps used to extract teeth from alveolar bone.

## Files:

instruments used during grafting procedure.

## Elevators:

used to loosen the tooth from the periodontal ligament and ease extraction.

## Curettes:

ideal for curettage cyst removal and debridement of tooth socket.

## Clamps:

Towel clamps to help with placement.

## Chisels:

used to section teeth and or split widen the split or remove bone.

## Calipers:

used to measure bone or other oral structure.

## Burs, Drills and Trephines:

instruments necessary for harvesting bone cores.
