The Relationship between the  
five factor personality traits of  
workers and their job satisfaction.  
~~Study on~~

The aim of this study to investi-  
gate the relationship between  
five factor personality traits and  
job satisfaction among workers  
of five & star hotels within  
Alana district of Antalya province  
In line with purpose, the study  
was conducted with worker from  
all departments of the hotel  
included in the study simple  
During the study, a total of  
471 workers from 12 five star  
hotel were contacted. Based on  
the correlation analysis results,  
a ~~satisfaction~~ significant relationship  
was identified between intrinsic

Satisfaction and the openness and conscientiousness dimensions. on the other hand, so statistically significant relationship was observed between extrinsic satisfaction and five factor personality traits. furthermore, a statistically significant relationship was also observed between general job satisfaction and the openness and conscientiousness dimensions.

Based on the regression analysis, it was determined that the extraversion dimension had a more significant effect than the openness dimension. The extraversion dimension had a negative effect on extrinsic job satisfaction, while the openness dimension had a positive effect. The extraversion and openness dimensions had a weak but statistically significant effect on general job satisfaction. The extraversion dimension had a negative effect on general job satisfaction, while the openness dimension had a positive effect.
