

Department of Electrical Engineering
Final – Term Assignment Spring 2020

Date: 22/06/2020

Course Details

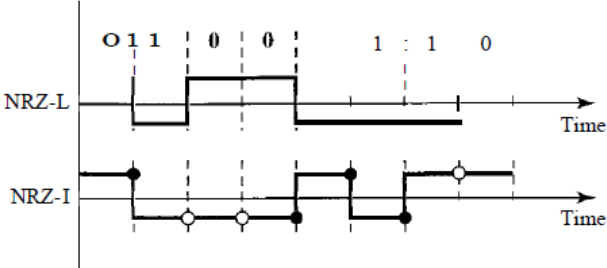

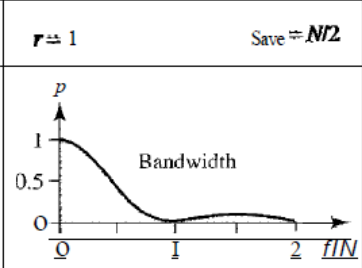

Course Title: Computer Communication Network
Instructor: Engr Muhammad Waqas

Module: 06
Total Marks: 50

Student Details

Name: Idrees Iqbal

Student ID: 13171

Q1.	(a)	<p>1. An NRZ-I signal has a data rate of 100 Kbps. Using the following Figure, calculate the value of the normalized energy (P) for frequencies at 0 Hz, 50 KHz, and 100 KHz.</p>  <p style="text-align: center;">O No inversion: Next bit is 0 • Inversion: Next bit is 1</p>  <p style="text-align: center;">$r \approx 1$ Save $\approx N/2$</p> <p style="text-align: center;">Bandwidth</p> <p style="text-align: center;">P</p> <p style="text-align: center;">f/TIN</p> <p>2. What is the Nyquist sampling rate for each of the following signals? a. A low-pass signal with bandwidth of 200 KHz? b. A band-pass signal with bandwidth of 200 KHz if the lowest frequency is 100 KHz?</p> <p>3. We have sampled a low-pass signal with a bandwidth of 200 KHz using 1024 levels of quantization. a. Calculate the bit rate of the digitized signal. b. Calculate the SNRdB for this signal. c. Calculate the PCM bandwidth of this signal.</p> <p>4. What is the maximum data rate of a channel with a bandwidth of 200 KHz if we use four levels of digital signaling.</p>	Marks 20 CLO 1
Q2.	(a)	<p>Draw the graph of the NRZ-L, NRZ-I, Manchester and differential Manchester scheme using each of the following data streams a. 01010101 b. 00110011</p>	Marks 16 CLO 1
Q3.	(a)	<p>1. A TV channel has a bandwidth of 6 MHz. If we send a digital signal using one channel, what are the data rates if we use one harmonic, three harmonics, and five harmonics? 2. A signal travels from point A to point B. At point A, the signal power is 100 W. At point B, the power is 90 W. What is the attenuation in decibels? 3. The attenuation of a signal is -10 dB. What is the final signal power if it was originally 5 W? 4. A signal has passed through three cascaded amplifiers, each with a 4 dB gain. What is the total gain? How much is the signal amplified? 5. If the bandwidth of the channel is 5 Kbps, how long does it take to send a frame of 100,000 bits out of this device? 6. The light of the sun takes approximately eight minutes to reach the earth. What is the distance between the sun and the earth?</p>	Marks 12 CLO 1
	(b)	<p>A signal has eight data levels with a pulse duration of 2 ms. Calculate the pulse rate and bit rate.</p>	Marks 02 CLO 1

Semester 8th

Paper CCN

① Submitted To Eng. M. Wasas

Q No 1

Given data

Data rate $N = 100 \text{ kbps}$

Now first calculate

$\frac{f}{N}$ value then after find energy p value by using the given figure.

$f =$ frequency

$N =$ data rate

$p =$ energy per Hz

The given figure is

Case 1: $f = 0 \text{ Hz}$ then $\frac{f}{N} = \frac{0}{100} = 0$

$\frac{f}{N} = 0$, so $p = 1$

Case 2: $f = 50 \text{ kHz}$ then $\frac{f}{N} = \frac{50}{100} = 0.5$

$\frac{f}{N} = 0.5$ so

$p = 0.5$

Case 2

$$F = 50 \text{ KHz}$$

then

$$f/N = \frac{50}{100} = 0.5$$

$$f/N = 0.5 \Rightarrow S_0 \quad P = 0.5$$

Case 3: $f = 100 \text{ KHz}$

$$\text{then } \frac{f}{N} = \frac{100}{100} = 1$$

$$\frac{f}{N} = 1 \Rightarrow S_0 \quad P = 0$$

— * — * — * —

Q.No 1 part a) b)

In a band pass signal the minimum frequency is equal to bandwidth plus minimum frequency

$$f_{\text{max}} = 200 + 100$$

$$= 300 \text{ KHz}$$

$$= 300 \times 10^3 \text{ Hz}$$

$$= 3,00,000 \text{ Hz}$$

Therefore

$$\text{Nyquist rate} = 2 \times f_{\text{max}}$$

(3)

13171

$$= 2 \times 300,000$$

$$= 6,00,000 \text{ Sample/s}$$

Q No H.1 part 2 (a)

Given data

A low pass signal with

$$\text{bandwidth} = 200 \text{ kHz}$$

$$= 200 \times 10^3 \text{ Hz}$$

$$= 200,000 \text{ Hz}$$

Nyquist Rate

Amplitude

$$\text{Nyquist Rate} = 2 \times f_{\text{max}}$$

Low pass signal

f_{min}

Frequency

In a low pass signal, the minimum frequency $f_{\text{min}} = 0$

Therefore the Nyquist rate $= 2 \times f_{\text{max}}$

$$= 2 \times 2,00,000$$

$$= 4,00,000 \text{ Sample/s}$$

(4)

13173

Q No 11.1 part 3

a)

$$\begin{aligned} \text{Bit rate} &= \text{Sampling rate} \times \text{number} \\ &\quad \text{of bits per sample} \\ &= F_s \times n_b \end{aligned}$$

$$n_b = \log_2 1024 = 10 \text{ bits}$$

$$f_s = 2 \times 200 \text{ kHz} = 400 \text{ kHz}$$

$$\begin{aligned} \text{Bit rate} &= F_s \times n_b \\ &= 400 \times 10 \\ &= 4 \text{ Mbps} \end{aligned}$$

$$\begin{aligned} \text{(b) } \text{SNR}_{\text{dB}} &= 6.02 n_b + 1.76 \text{ dB} \\ &= 6.02 \times 10 + 1.76 \\ &= 60.2 + 1.76 \\ \text{SNR} &= 61.96 \end{aligned}$$

$$\text{(c) } B_{\text{min}} = n_b \times B_{\text{analog}}$$

B_{analog} represent the bandwidth of analog signal

$$\begin{aligned} B_{\text{min}} &= 10 \times 200 \text{ kHz} \\ &= 2000 \text{ kHz} \end{aligned}$$

(5)

13.71

Qn-1 part 4

Bandwidth: $200 \text{ kHz} = 200,000 \text{ Hz}$

★ The maximum data rate can be calculated

$$N_{\text{max}} = 2 \times B \times \log_2 4$$
$$= 2 \times 200,000 \times 1 \log_2 4$$
$$= 800 \text{ Kbps}$$

Qn-2:

We need to draw the graph for

(a) 01010101

(b) 00110011

NRZ-L, NRZ-I, Manchester-B-A-1
and we need to find the bandwidth.

NRZ-L

In NRZ-L the voltage levels are both sides of the time axis

Voltage level +ve = 0

Voltage level -ve = 1

Graph for NRZ-L . 01010101

for 00110011

NRZ-L has a average rate is $N/2$ mean average no of changes in the signal level.

The minimum bandwidth for average data rate is

$$B_{min} = 5 = N/2 \quad N-1 \text{ bit rate.}$$

$$B_{min} = \frac{N}{2}$$

(7)

13371

NRZ-1

This is same as NRZ-L
but inversion occurs when next bit
is other with no inversion.

NRZ-1

Average signal rate of NRZ-1 is

8

13171

Q No 3 Part 1

Given data

TV channel bandwidth (B) = 6 MHz
using the first harmonic

$$\text{Bandwidth (B)} = \frac{\text{data rate (bit rate)}}{2}$$

$$\begin{aligned}\text{Data rate} &= 2 \times B \\ &= 2 \times 6\end{aligned}$$

Therefore data rate = 12 Mbps

using the first and three harmonics
A better result can be achieved
by using the first and the
third harmonics with the
required bandwidth (B) = $\frac{3 \times \text{data rate}}{2}$

$$\text{Data rate} = \frac{2 \times B}{3}$$

$$= \frac{2 \times 6}{3}$$

$$= 4 \text{ Mbps}$$

(9)

18170

Using the 1st and 5th harmonics

$$\text{Bandwidth} = \frac{5 \times \text{data rate}}{2}$$

$$= \frac{2 \times B}{5}$$

$$= \frac{2 \times 6}{5}$$

$$\text{data rate} = 2.4 \text{ Mbps}$$

QNo 3 part (2)

$$\text{The attenuation (dB)} = 10 \log_{10} \frac{B}{A}$$

$$= 10 \log_{10} \left(\frac{90}{100} \right)$$

$$= 10 \log_{10} (0.9)$$

$$= 10 (-0.046) \text{ since}$$

$$\log_{10} (0.9) = -0.046$$

$$\text{Attenuation (dB)} = -0.46 \text{ dB}$$

Qno 3

Attenuation is the reduction of strength in the power of a signal due to external factors

The extent of reduction is measured in decibels.

Given: $P_6 = 5W$

Attenuation = -10 dB

Therefore

$$-10 = 10 \log_{10} \left(\frac{P_d}{P_6} \right)$$

$$P_d = 10^{-2} \times 5$$

$$P_d = 0.5W$$

Qno 2 part 4

A signal has passed through 3 cascaded amplifiers, each with a 4 dB gain

$$\text{Total gain (PdB)} = 3 \times 4 \text{ dB}$$

$$P_{dB} = 12 \text{ dB}$$

The signal is amplified then

$$P_{dB} = 10 \log_{10} \frac{P}{P_0}$$

$$P = 10 \frac{P_{dB}}{10}$$

(11)

12171

$$P = 10 \frac{10}{10}$$

$$P = 12.85$$

Q No 3 part 5

$$\text{Bandwidth} = 5 \text{ kbps}$$

$$= 5000 \text{ bps}$$

$$(1 \text{ kbps} = 1000 \text{ bps})$$

It takes time to send a frame of 100,000 bits out of this device $T = \frac{100,000}{5000}$

$$T = 20 \text{ s}$$

(12)

18171

2

Q.No 3 part 6

The light of Sun takes
time to reach earth $\approx 8 \text{ min}$
That is

$$8 \text{ mins} \approx 8 \times 60 \text{ s}$$

$$\approx 480 \text{ s}$$

Convert miles per second to km/s

$$\approx \frac{186000 \text{ miles}}{\text{sec}} \times \frac{1 \text{ km}}{0.62 \text{ miles}}$$

$$\approx 3,00,000 \text{ km/s}$$

Therefore the distance b/w
Sun and earth is 480×300000

$$\approx 144,000,000 \text{ km/s}$$

Q.No 3 # b

$$\text{pulse rate} \approx \frac{1}{2 \text{ ms}} \approx 500 \text{ pulse/sec}$$

$$\text{Bit rate} = \text{pulse rate} \times \log_2 L$$

$$\approx 500 \times \log_2 8$$

$$\approx 1500$$
