Q 1 :-

A Company produces of products P_1, P_2 and

Production	Time required for progress	Time required for finishing
P_1	12	03
P_2	06	08
P_3	08	06
company capicity	3000	1500

Now Convert into linear pr

$$12x_1 + 6x_2 + 8x_3 \leq 3000$$

$$3x_1 + 8x_2 + 6x_3 \leq 15$$

Maximize $Z = 1000x_1 + 800x_2 + 4$

Now find x_1 intercep

put $x_2 = 0$ and $x_3 = 0$

$$12x_1 + 6x_2 + 8x_3 = 300$$

Put $x_2 = 0$ and $x_3 =$

$= 12x_1 + 6(0) + 8(0) = 3000$

$x_1 = \frac{3000}{12} = 250$

$= P_1(250, 0, 0)$

Now for x_2 intercept put $x_1 = 0$ and $x_3 = 0$

$12x_1 + 6x_2 + 8x_3 = 3000$

$12(0) + 6x_2 + 8(0) = 3000$

$x_2 = \frac{3000}{6} = 500$

$P_2 = (0, 500, 0)$

Now for x_3 intercept put

$x_1 = 0$ and $x_2 = 0$

$3x_1 + 8x_2 + 6x_3 = 1500$

$3(0) + 8(0) + 6x_3 = 1500$

$x_3 = \frac{1500}{6} = 250$

$P_6 = (0, 0, 250)$

Thus all point put in $S_f(z)$ to find the minimum value.

$Z = 1000x_1 + 800x_2 + 400x_3$

$Z = 1000(250) + 0 + 0 = 250000$

$Z = 1000 + 800(500) + 0 = 400000$

$Z = 0 + 0 + 400(375) = 150000$

$Z = 1000(500) + 0 + 0 = 500000$

$Z = 0 + 800(187.5) + 0 = 150000$

$Z = 0 + 0 + 400(250) = 100000$

Now the maximum point is

$P_4(500, 0, 0) = 500000$

Q2:

* The MD of the Company has the following goals wh are arranged in orderd of priority.

* P_1 No under utilization of plant production capecity.

* P_2 Sells maximum possible number of products. A and B the MD has twice as much desire to sell product 'A' as for product 'B' becuse the not profit from the Sale of product A es ~~for product B~~ the amount

Scanned with CamScanner

* We are formulating the above as 0-1 knapsack problem and solving it.

* goal is the maximization of Sales.

then

$$x_1 + z_2^- = 150$$

and

$$x_2 + z_3^- = 200$$

Subjected to constraints.

$$x_1 + x_2 + d_1^- - d_1^+ = 500$$

$$x_1 + d_2 = 150$$

$$d_2 + d_3 = 200$$

and

$$x_1, x_2, d_1^-, d_2^-, d_3^-, d_1^+ \geq 0$$
