(1)

Typically the scans  
work with nuclear  
medium to evaluate the  
way your thyroid  
best function nuclear small  
amount of radioactive  
material diagnose  
disease  
including thyroid test  
scan type of  
thyroid most type  
cancer types absorb  
iodine naturally.

Thyroid <sup>(2)</sup> time a gamma  
Camera or scanner  
detect the radioactive.

≡ treatments

Radiiodine therapy is  
nuclear medicine treatment

Do or can over active

thyroid a condition  
called. hyperthyroidism

and also to

treat thyroid cancer.

X — X — X —

(3)

(Ans) polycystic Kidney D:

polycystic kidney disease is  
an inherited disorder in  
which clusters of cyst  
develop primarily to enlarge  
and lose function over  
time. New cancerous round  
scum containing fluid  
the cyst vary in  
size and they can  
from very large

Ans<sup>3</sup>

## Lithotripsy (4)

Lithotripsy is a medical procedure involving the physical destruction of very hard masses like kidney stone, bladder stone or gallstone. The term is derived from Greek words meaning breaking.

stone  
types:

There are two types of lithotripsy:  
1. Extracorporeal shock wave lithotripsy  
2. Laser lithotripsy

(5)  
Lithotripsy tools:

Lithotripsy machine

Catheter

Stent

Endoscopy camera

12 magnifying machine

During lithotripsy high

energy shock waves

will pass through your

body until they

stone.

The stone into very

small pieces through

your urinary system

(4)  
Ans

(b)  
many surgical procedures  
name can be broken  
into part to indicate  
Dev meaning for  
example gastrectomy  
ectomy is a  
subid meaning the  
removal of part  
of the body  
of "omy" mean cutting  
into part of  
body but not  
Necessarily removing  
the stomach

(7)

Ans Urinary tract infection

A urinary tract infection

(UTI) is an infection

any part of your

urinary system your kidney

ureters bladder and

the ureters must infection

the lower urinary tract

the bladder and

the ureters women UTI

greater risk of

developing a (UTI)

the men.
