5:- CONSTANTLY BE LEARNING

A project manager is constantly learning new ways to effectively do his or her job.

Those who plan do better than those who don't plan though they rarely stick to their plan.

Whatever industry you want to work in, if planning and executing a plan your niche, then a degree project managed for you.

the expect net monetary gain or loss from a project by bringing all expected future cash inflows and outflows to the present time.

4) INTERNAL RATE OF RETURN.

Simplicity put, the rate of return (IRR) gives you the average annual rate of return of a project through out its lifetime.

While the IRR provide the investment rate of return, the NPV provides the dollar

2) ACCOUNTING RATE OF RETURN.

The accounting rate of return (ARR) calculates the return of a project by taking the annual net income and dividing it by the initial investment in the project.

ARR also does not consider cash flows, which is a crucial aspect of any investment project.

3) NET PRESENT VALUE

The net present value (NPV) method calculates

4- CRITICAL CHAIN PROJECT MANAGEMENT.

Critical chain project management is used to plan and manage project while attaining team resources constraints.

It is based on the theory of constraints which states that a chain is only as strong as its weakest link.

In CCPM, project delays are prevented by adding buffers to inherent task and resource dependencies.
