Exam

Q¹

Ans:-

Positive and negative
Point of buildings.

1) The following building that we have seen in diagram is: look beauty but show (front) of building is not such in main point. it looks as in ~~corner~~ but ~~that~~ that is not looking good. The main source is - that - that the centre of building is normally in centre - which looks ~~be~~ beautiful. The colour of the building is not bad. it is good for seeing to the building. you will not feeling bored to see this building.

∴ height of building is also good. The setting of window design is also good. The engineer make not mistake with window row.

∴ The designer make one mistake because the flowing of water from the up is ~~go~~ direct goes to the front of building. If rain start and water comes from the floor ~~roof~~ so the people will not take interest in this building.

Normally normally we have seen that the water of rain is directly goes to the garden ~~other~~ to the other place.

Q:- 2

Ans:-

The answer is following;

Instruction
:- 1 inch = ~~6~~ 6 foot
in this diagram.
