Create table customers

(Customer\_Id int primary key not null,

Customer\_Name varchar (25) not null,

address varchar (25) ,

Oder\_NO INT (20) NOT NULL);

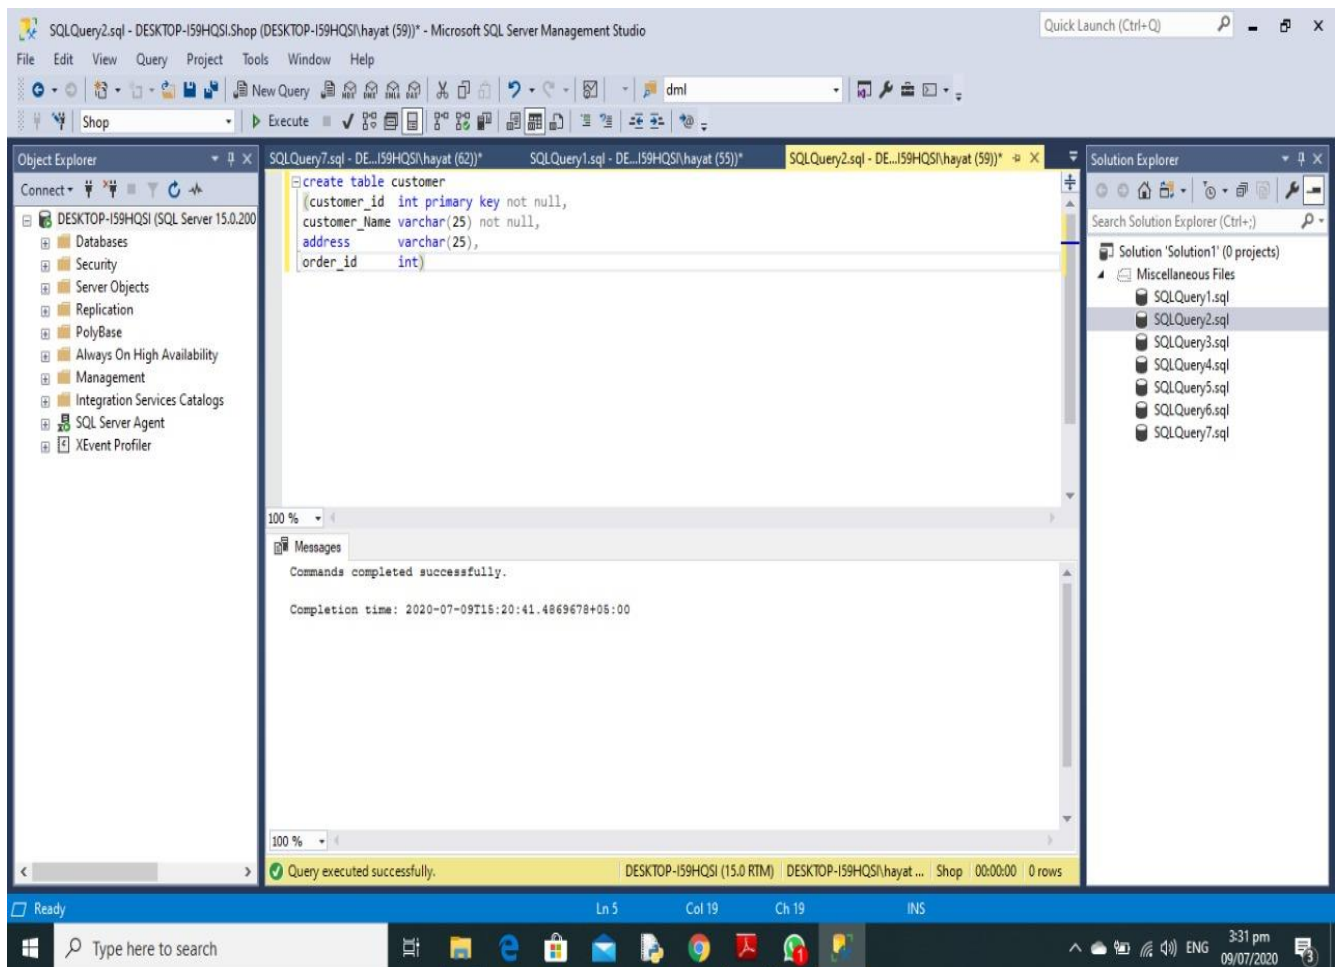

INSERT INTO 'customers'

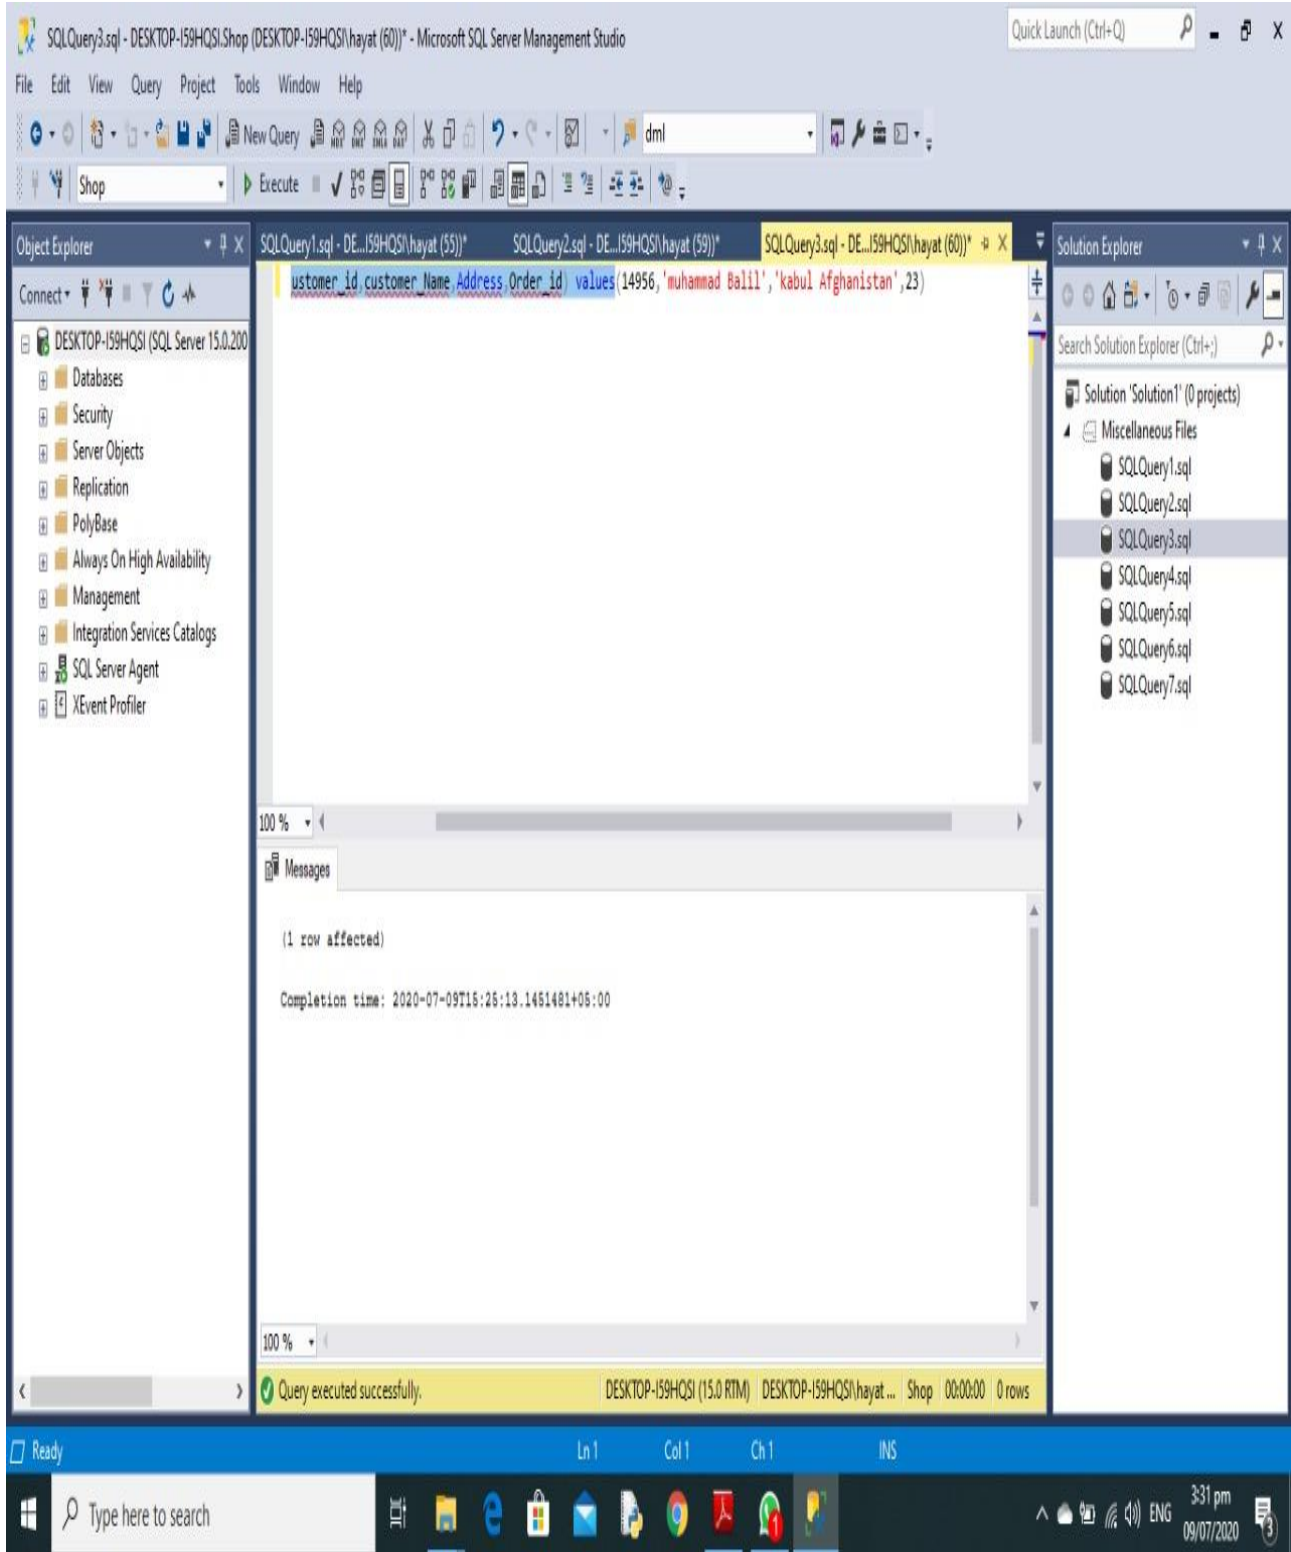

('Customer\_id', 'Customer\_Name',

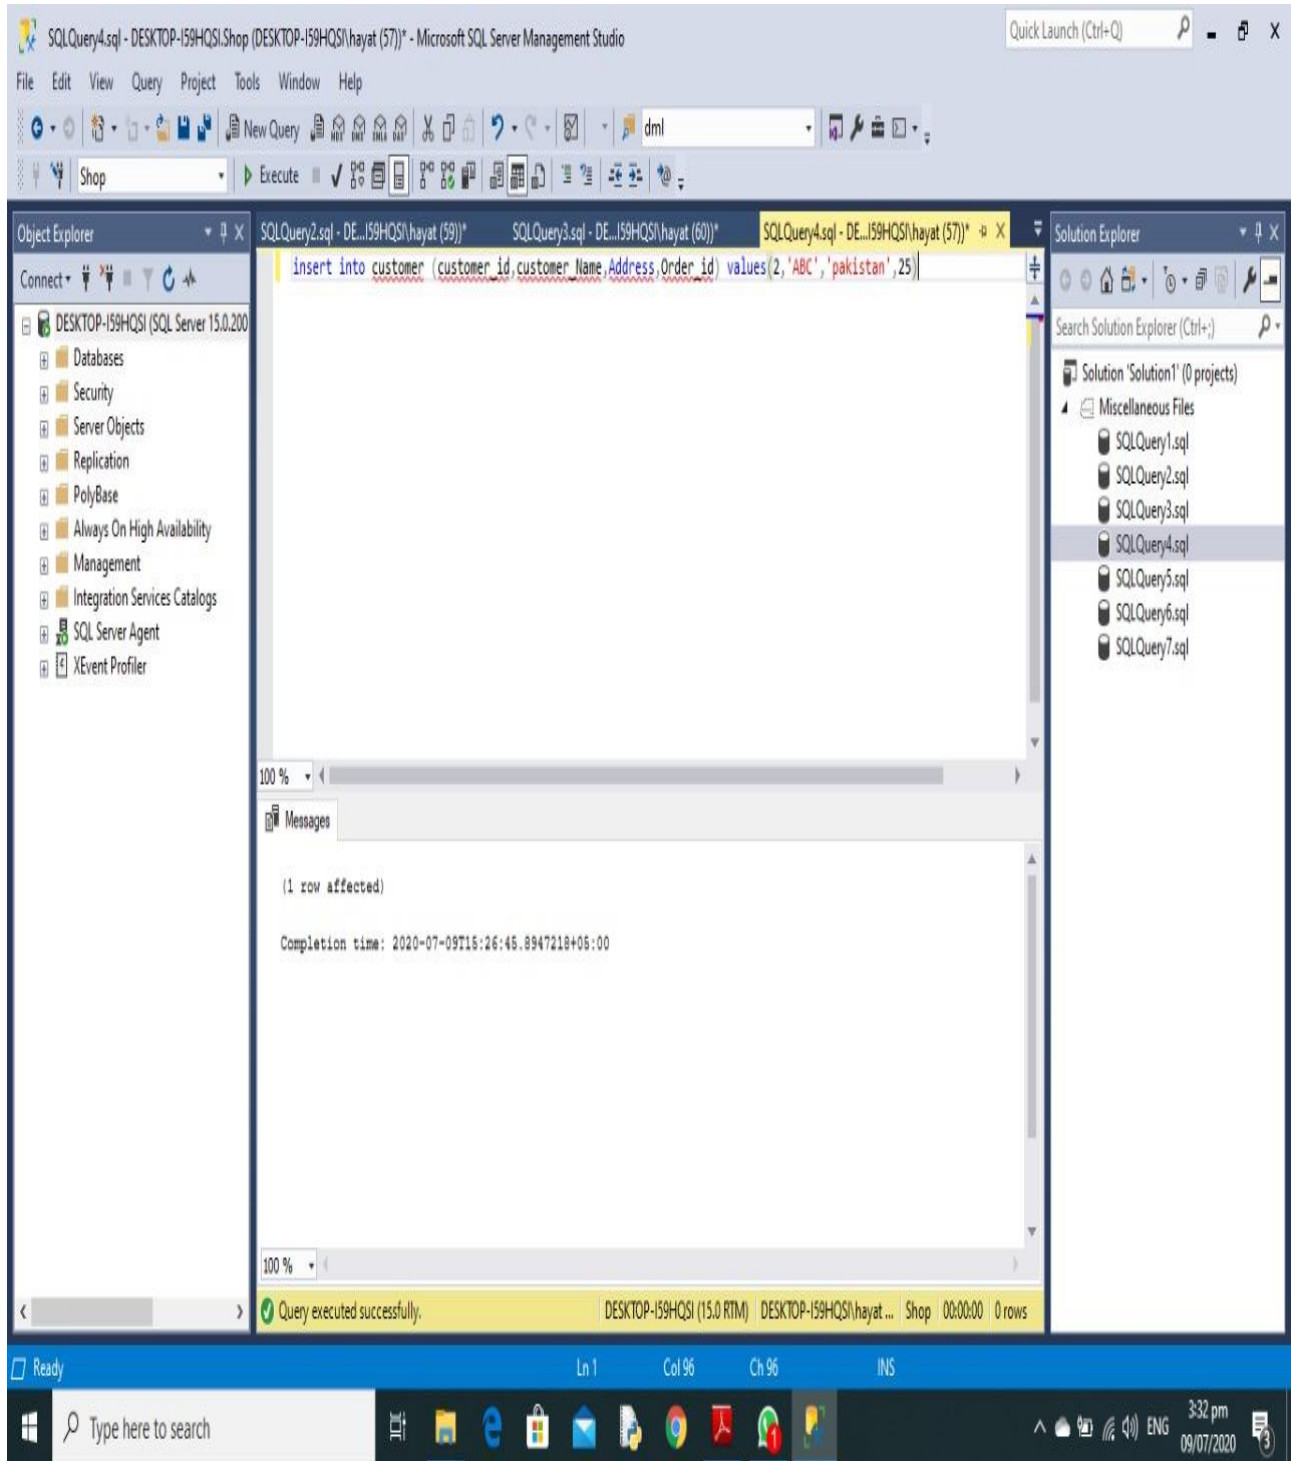

'Address','Oder\_No')

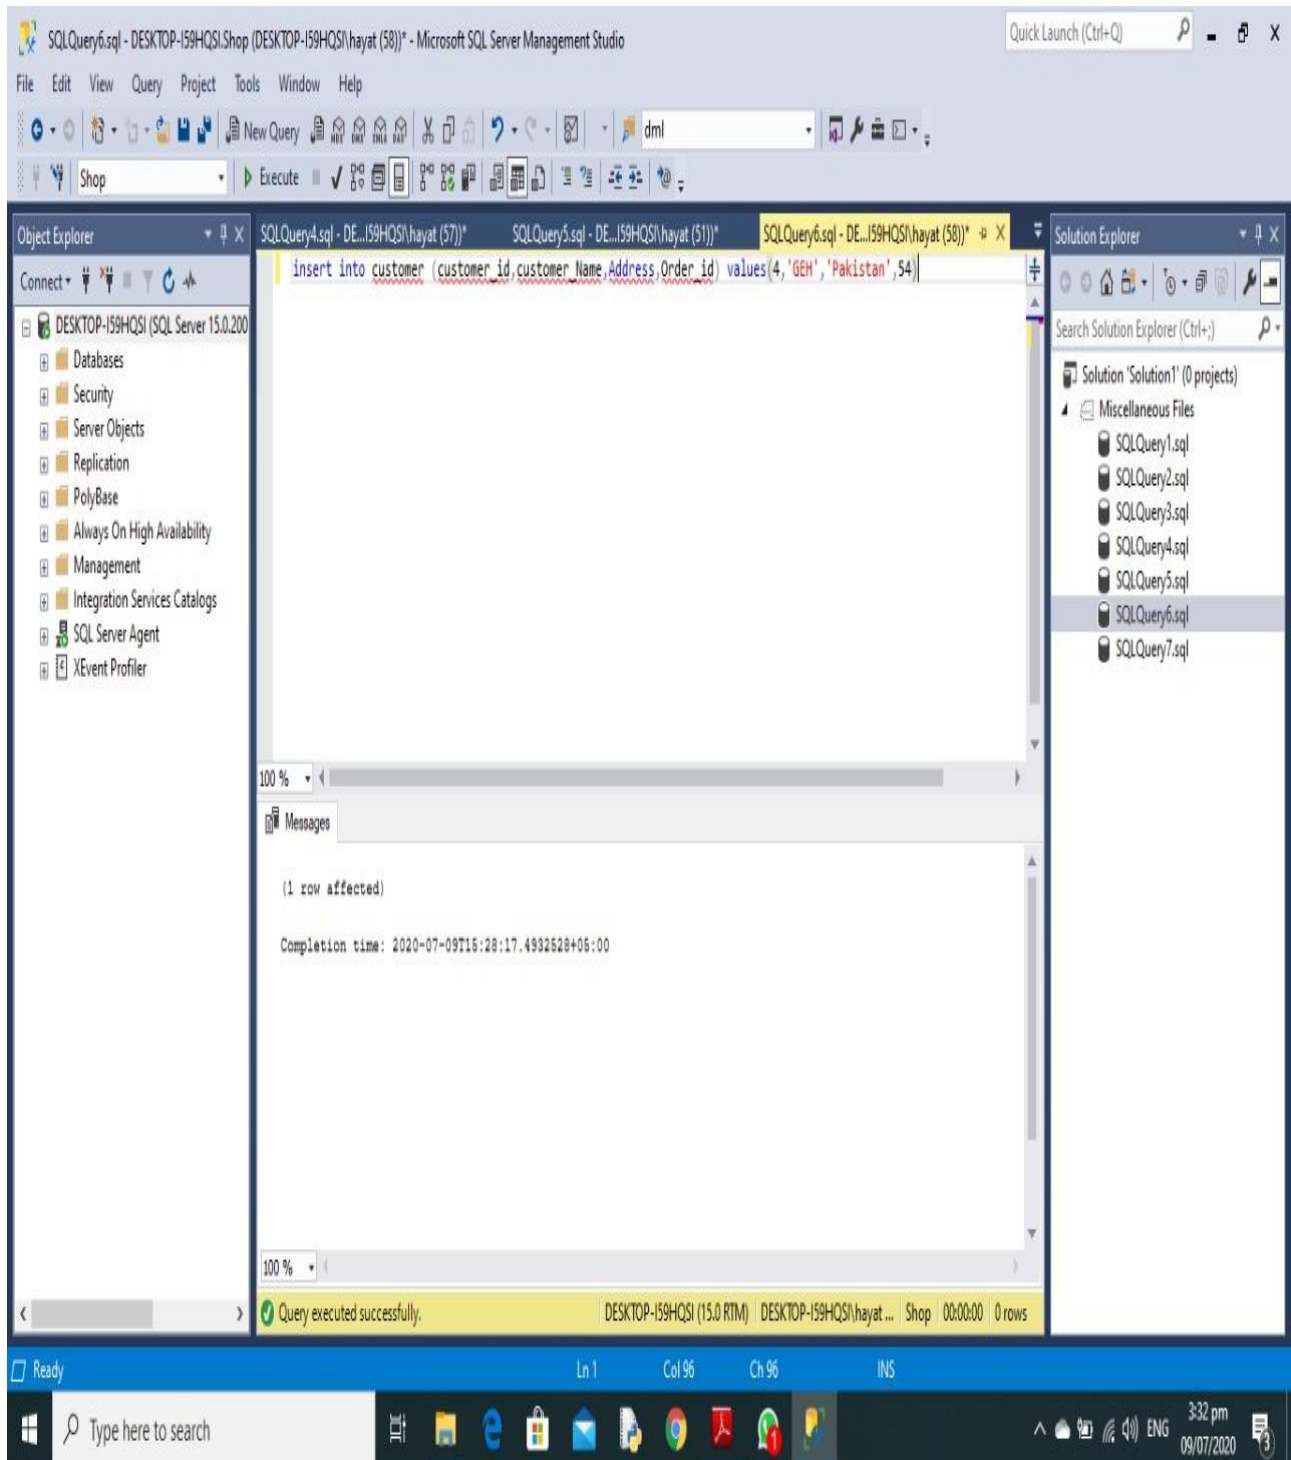

VALUES

(14956,'Mohammad Bilal', 'kabul Afghanistan','23');

# Output

The screenshot displays the Microsoft SQL Server Management Studio interface. The main window shows a query editor with the following SQL query:

```
select * from customer
```

The query has been executed successfully, and the results are displayed in a table with the following columns: customer\_id, customer\_name, address, and order\_id. The results are as follows:

customer_id	customer_name	address	order_id
2	ABC	pakistan	25
3	DEF	pakistan	24
4	GEH	Pakistan	54
14956	muhammad Ball	kabul Afghanistan	23

The status bar at the bottom indicates that the query was executed successfully, returning 4 rows in 00:00:00. The Windows taskbar at the bottom shows the system tray with the time 3:32 pm and date 09/07/2020.
