Q1:

A woman having osteoporosis will most likely gets a treatment of weight bearing-exercises, Exercises that may include to build bone strength along with techniques that improve posture, lessen risk of injury, teaching her proper body movement for daily activities including bending and lifting.

Q2: Difference b/w osteoporosis, osteomalacia and osteomyelitis?

osteoporosis:

A condition that leads to brittle bones that are more likely to fracture than bones found in healthy people.

(2)

Date : \_\_\_\_\_

This disorder breaks down mineralized bone."

osteomalacia :

"A condition that leads to softer than normal bones that are also more likely to fracture than in a healthy person."

osteomyelitis :

osteomyelitis is an infection in a bone. Infections can reach a bone by travelling through the blood stream or spreading from nearby tissues.

Infection can also begin in the bone itself if an injury exposes the bone to the germs.
