Question #1

Answer.

SLUMS IN PESHAWAR:-

Most of the population of Peshawar are living in slums in many locations eg the area near to Arbab road called Patti is one of the examples of slum area in Peshawar. And also the area of Kohat road and Ghareebabad etc. are the same common examples of slums in Peshawar.

It's said that one seventh of the population of the whole world are living in slums nowadays.

The one living in slum puts himself into a dangerous time to live. Because it's too risky to live in slums and slums are, whenever it is, it may be in Peshawar or everywhere else.

p.t.u

HOW TO IMPROVE SLUMS IN PESHAWAR?

The following suggestion may help to improve the living-hood in slums in Peshawar.

1. To improve the Infrastructures and land-titling may help to prevent slums.
2. Having proper sanitation planning may improve the prevention against slum.
3. To construct homes with cement and bricks.
4. To construct community-managed toilet-blocks so that the maintenance and ownership would belong to the resident.
5. Planning rural development along with urban development, is the most important fact in order to improve the slums in Peshawar.
6. Undergrounding slums in their homes instead of releasing them out of their homes.

③

Question #2
ANSWER

STRUCTURE AND PATTERN OF ISLAMABAD MASTER-PLAN :-

A master plan is a dynamic long-term planning document that provides a conceptual layout to guide future growth and development. It includes analysis, recommendation, economy, housing, transportation, community facilities and land use.

The structure and pattern of Islamabad master plan is very useful, in such a way that an architect of that plan divided its area into zones and than sector, in order to make it accessible for the population as of present and future generation.

One can easily understand the structure and pattern of Islamabad - master plan, and can access to it.

p. 7-8

CRITICIZING ISLAMABAD'S MASTER PLAN:-

1. Islamabad master plans have simply become unviable relics of the past, And if that is the case, how exactly should the city be managed?

Islamabad was planned as a low density, no nonsense, and administrative unit. But when the city was being formed, Dorciadis was more than just its architect designing roads, buildings and avenue.

2. The most important fact regarding the criticism of master plan of Islamabad is that, The roads should be made wider than how they are now in some locations.

3. And secondly the stories of houses should be kept more than one, as we know the population is increasing day by day. That's all.

Question #3AnswerLAND USE MODEL WHICH REPRESENTS PESHAWAR:-

Both Concentric zone model (which suits Peshawar ring road structure) and Multiple Nuclei Model suits and can best represent Peshawar city.

But the land use model which represent Peshawar is Multiple Nuclei - Model because Peshawar has many centers for their specific characteristics like trade, residency, and industries etc. That's why it's better suit and represent Peshawar city. (Multiple Nuclei Model).

All the zones are indicated on the map given.

Peshawar is that form of Multiple Nuclei model which shows the distribution of resources and people in Residential areas, and indicates that's the land of this city is not flat in all areas.
