Q.No 2.

CPEC Prospects and challenges for Pakistan.

Introduction

In the seventy years his of Pakistan, the initiation and launching of the China Pakistan Economic Corridor is a significant economic activity that has been truly termed as a "game changer" since the fall of Dhaka that led to creation of Bangladesh in 1971. Pakistan has been continuously struggling to regain its position on economic front.

Focus Areas of Pakistan (Technology)

Increased funding for R and D by the Chinese government has resulted in the increase in the the trained technical workforce that ultimately led to a dramatic increase in technical output. New technologies are bound to be embedded in the C-PEC project. With fast-paced technology developments, it is evident that in near future only technologically sound nations will be able to honorably. The future

economic growth of a nation will depend on the confident use and application of big data, artificial intelligence, and connectivity; hence Pakistan is required to take initiatives in these focus areas. Therefore it is imperative for Pakistan to initiate academic and research programs with the help of Chinese institution to train as many Pakistani youth as possible in the five focus areas of: (1) artificial intelligence, (2) robotics, (3) renewable energy, agriculture and (5) biotechnology.

Major Areas of current Activities in Pakistan.

1. Construction of highways and railway tracks, 2. Development of Gwadar port, 3. Energy generation projects, 4. Establishment of industrial zone along the CPEC route, 5. Laying down of pipelines for oil and gas transmission, 6. Cyber networking and telecommunication, 7. Water supply projects. These, it is important for Pakistan to create proper infrastructure.

Conclusions

China Pakistan Economic Corridor (C-PEC) has opened up vast opportunities for the socio-economic development of Pakistan. Pakistan need to focus on key areas of artificial intelligence, robotics, renewable energy, agriculture, and biotechnology to develop its human resource. Trained technical human resource in these areas will be essential for a sustainable development with Chinese investment.

Introduction

The catastrophe of September 11, 2001 has attracted the keenest interest of experts in the field of foreign policy to study the centrality of decisions taken by the states and other independent actors. The event not only transformed the global politico-security dimensions but also altered the South Asian political and geo-security environment. The United States announced to attack Afghanistan and compelled Pakistan to play frontline state role in the war on terror.

U.S. Foreign Policy Shift in South Asia After 9/11

Attacks.

Foreign policy crisis erupts with an environmental change in the internal or external context of a state. The triggering of a foreign policy crisis is perceptual. More precisely it derives from three inter-related perceptions (a) threat to basic values/objectives, (b) finite time for response and (c) limited resources.

6

probability of involvement in military hostilities (Brecher 1993). The moment of 8:46:10 marked a paradigm shift in world politics when American Airlines flight 11 collided into the North Tower of WTC, and instantly all passengers including crew member perished along with unknown number in the tower (9-11 commission 2004). The terrorist attacks on the United States consumed 2996 people and commenced an unending war against global terrorism. Senator Orrin Hatch told media report that U.S. found evidence that bin Laden received messages from his associates that "actually saying over the airwaves, Privat airwaves at that they had hit targets"
