DEPARTMENT OF CONSTRUCTION ENGINEERING MANAGEMENT

## Question 2. <br> Discuss how Cost-benefit analysis is effective for a project? Support your arguments with real example

## Answer: Definition of 'Cost Benefit Analysis

## Definition

A procedure for estimating all costs involved and possible profits to be derived from a business opportunity or proposal

Description: It takes into account both quantitative and qualitative factors for analysis of the value for money for a particular project or investment opportunity. Benefits to costs ratio and other indicators are used to conduct such analyses

The objective is to ascertain the soundness of any investment opportunity and provide a basis for making comparisons with other such proposals. All positives and negatives of the project are first quantified in monetary terms and then adjusted for their time-value to obtain correct estimates for conduct of cost-benefit analysis. Most economists also account for opportunity costs of the investment in the project to get the costs involved.

Cost-benefit analysis (CBA) is a technique used to compare the total costs of a programmed /project with its benefits, using a common metric (most commonly monetary units). This enables the calculation of the net cost or benefit associated with the programmed.

As a technique, it is used most often at the start of a programmed or project when different options or courses of action are being appraised and compared, as an option for choosing the best approach. It can also be used, however, to evaluate the overall impact of a programmed in quantifiable and monetized terms.

## EXAMPLE

Good Health' is a startup hospital that has been in operation for close to two years now. The manager, however, plans to expand its operations in the third working year. The hospital management decides to run a cost-benefit analysis to determine whether or not the decision is beneficial or feasible.

The management analyzes a time horizon of one year and estimates that the total revenue collected will amount to $\$ 200,000$. However, this will be possible if 2 more physicians are hired and more hospital equipment worth $\$ 100,000$ bought. The salary of the physicians will be $\$ 70,000$, and the cost of hiring and training will be $\$ 5,000$.

Therefore, when calculating the CBA, we first get the total costs by adding all the costs.
In this case, it will be salaries + equipment+ cost of hiring and training
$=100,000+70,000+5,000$
$=\$ 175,000$
Additionally, there is the cost of expanding consultation rooms which stands at $\$ 10,000$.
On the other hand, the benefits that will come after the implementation of the plan will be $\$ 200,000$. Therefore, using the benefit-cost ration, we get $175,000 / 200,000=0.875$. Given that the value is positive and that the total benefits are greater than the costs, the CBA indicates that the decision to expand the hospital's operation is feasible and beneficial to the company.

## Question No. 01 <br> Define and explain the risk log/register in your own words. Develop a risk log/register for the construction project (you have worked in or you are working). Details of each project must be unique and should be provided accurately to the best of your knowledge. Risk register is attached at the end of the paper (Table 1). Use notes for specifying headings Answer: Risk Register

A Risk Register is a tool for documenting risks, and actions to manage each risk. The Risk Register is essential to the successful management of risk. As risks are identified they are logged on the register and actions are taken to respond to the risk. OR

A Risk Register, also referred to as a Risk Log, is a master document which is created during the early stages of your project. It is a tool that plays an important part in your Risk Management Plan, helping you to track issues and address problems as they arise.

There are many different tools that can act as risk registers from comprehensive software suites to simple spreadsheets. The effectiveness of these tools depends on their implementation and the organization's culture.
10) Special measurement for disposal of waste soil etc.

## Question 3.

(a) What is Normal Probability distribution?
(b) Suppose that the data concerning the first-year salaries of employees is normally distributed with the population mean $\mu=60000$ PKR and the population standard deviation $\sigma=15000$ PKR. Find the probability of a randomly selected employees earning less than 45000 PKR annually. Hint: To answer this question, you have to find the portion of the area under the normal curve from 45 all the way to the left. Find Z-Score table at the end of the paper (Table 2)

## Answer:

## Normal Probability distribution

The normal distribution is a probability function that describes how the values of a variable are distributed. It is a symmetric distribution where most of the observations cluster around the central peak and the probabilities for values further away from the mean taper off equally in both directions.

## Answer:

## Given data:

```
Mean \(\mu=60000\) PKR
Standard deviation \(\sigma=15000\) PKR-------------------------------(2)
\(\mathrm{x} \leq 45,000\)

\section*{Required:}

The portion of the area under the normal curve from 45 all the way to the left?

\section*{Z-Score table at the end of the paper (Table 2)?}

\section*{SOLUTION:}

The natural \(\log\) of normally distributed with the population mean \(\mu=60000 \mathrm{PKR}\) is 11.002 and standard deviation \(\sigma=15000 \mathrm{PKR}\) is 9.6158 What is the probability of a randomly selected employees earning less than 45000 PKR annually This is a tougher one. First let find out what the natural \(\log\) of 15,000 . Its 9.6158 . Next we need the standard deviation of log income. Its 9.6158.
Now we can form a z score.
\(\mathrm{Z}=(\mathrm{x}-\mathrm{u}) / \sigma\).
Put value in equ 1
\(\mathrm{Z}=(10.714-11.002) / 9.615\)
=-. 03
What is \(\mathrm{P}(\mathrm{Z}=-.03)\)
From table 2 we have (.51197)
\begin{tabular}{c|cccccccccc}
\hline \(\mathbf{Z}\) & \(\mathbf{. 0 0}\) & \(\mathbf{. 0 1}\) & \(\mathbf{. 0 2}\) & \(\mathbf{0 3}\) & \(\mathbf{. 0 4}\) & \(\mathbf{. 0 5}\) & \(\mathbf{. 0 6}\) & \(\mathbf{. 0 7}\) & \(\mathbf{. 0 8}\) & \(\mathbf{. 0 9}\) \\
