

# Enterprise Security Architecture

Business-driven security

April 2012

 **ERNST & YOUNG**  
Quality In Everything We Do

# Agenda

---

- ▶ Facilities and safety information
- ▶ Introduction
- ▶ Overview of the problem
- ▶ Introducing security architecture
- ▶ The SABSA approach
- ▶ A worked example
- ▶ Security architecture components
- ▶ Facilitated discussion

# The Problem: Information Security

## The business perspective

---

# The problem: answering the difficult questions

# Introducing security architecture?

## Traditional architecture vs. security architecture

- ▶ What type of structure do I want?
- ▶ Why do I want this structure?
- ▶ How will it be used?
- ▶ Who will be the users of the structure?
- ▶ Where should the structure be located?
- ▶ When will it be used?

**Building a physical structure**

- ▶ What type of information system is being considered and what will it do?
- ▶ Why is it needed?
- ▶ How will it be used?
- ▶ Who will use it?
- ▶ Where will it be used?
- ▶ When will it be used?

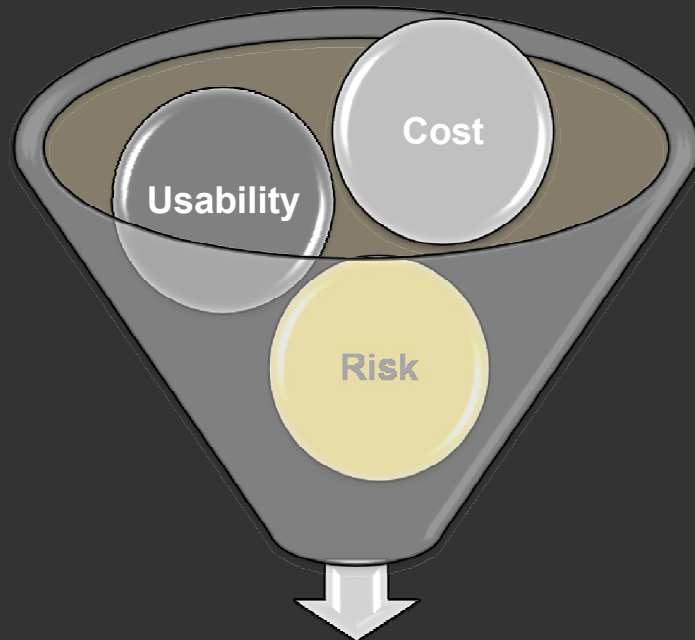

**Protecting business information**

- ▶ Designing a secure business information system could take a number of directions, but there is considerable potential for the security and business requirements to clash and neither party is satisfied with the end result.
- ▶ The answers to these questions provide the architect with the business requirements which can then be fed into the design process.

# How do I solve this problem

## What is business security architecture?

---

- ▶ The challenge in developing the architecture is to balance between risk, cost and usability
- ▶ Security architecture controls are composed of people, process and technology controls

An organisation needs security controls that are:

- ▶ Driven by business requirements rather than technical considerations
- ▶ Directly traceable to business objectives
- ▶ Designed from the outset to be cost-effective, avoiding remediation effort
- ▶ Meet legal, regulatory and policy compliance requirements by design
- ▶ Are appropriate to both the business risks and organisation's risk appetite

# Why do this? Benefits of the security architecture approach

---

## **Customised information security control framework**

- ▶ Driven by the organisation's business requirements
- ▶ Meeting compliance
- ▶ Alignment with the business' risk appetite

## **Reduces information security, IT and security audit costs**

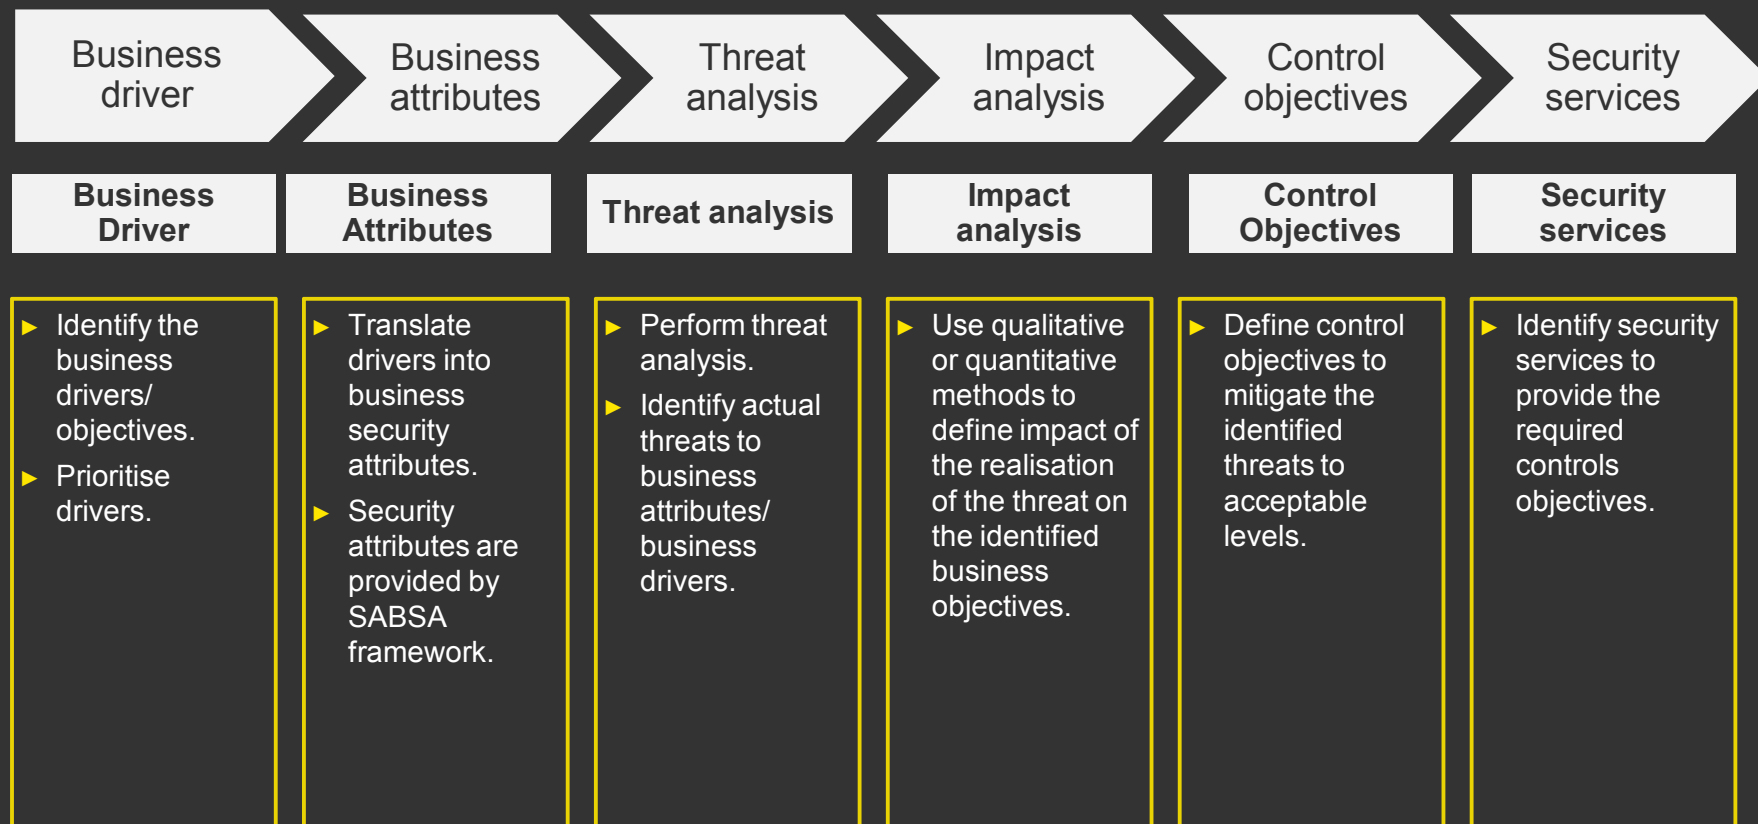

- ▶ Eliminates redundant controls
- ▶ Reduces ad hoc security implementation
- ▶ Provides detailed agreed security requirements

## **Informs executive management about security risk**

- ▶ Articulates impact of information security risk in business terms
- ▶ Provides structured control framework to evaluate compliance
- ▶ Creates foundation for quantitative assessment of security ROI

# The SABSA approach

## Step by step

# The SABSA approach

## An architect's perspective – Here comes the science!

	<b>Assets (What)</b>	<b>Motivation (Why)</b>	<b>Process (How)</b>	<b>People (Who)</b>	<b>Location (Where)</b>	<b>Time (When)</b>
<b>Business</b>	The Business	Business Risk Model	Business Process Model	Business Organization and Relationships	Business Geography	Business Time Dependencies
<b>Architect</b>	Business Attributes Profile	Control Objectives	Security Strategies and Architectural Layering	Security Identity Model and Trust Framework	Security Domain Model	Security-Related Lifetimes and Deadlines
<b>Designer</b>	Business Information Model	Security Policies	Security Services	Entity Schema and Privilege Profiles	Security Domain Definitions and Associations	Security Processing Cycle
<b>Builder</b>	Business Data Model	Security Rules, Practices and Procedures	Security Mechanisms	Users, Applications and the User Interface	Platform and Network Infrastructure	Control Structure Execution
<b>Tradesman</b>	Detailed Data Structures	Security Standards	Security Products and Tools	Identities, Functions, Actions and ACLs	Processes, Nodes, Addresses and Protocols	Security Step Timing and Sequencing
<b>Facilities Manager</b>	Assurance of Operational Continuity	Operational Risk Management	Security Service Management and Support	Application and User Management and Support	Security of Sites, Networks and Platforms	Security Operations Schedule

# Contextual & conceptual security

## Understanding the business and its risks

	Assets (What)	Motivation (Why)	Process (How)	People (Who)	Location (Where)	Time (When)
<b>Business</b>	The Business	Business Risk Model	Business Process Model	Business Organization and Relationships	Business Geography	Business Time Dependencies
<b>Architect</b>	Business Requirements	Security Objectives	Security Architecture and Requirements	Entity External and Internal	Security Domain Operational Profiles	Security Control Objectives
<b>Designer</b>	Business Requirements	Security Objectives	Security Architecture and Requirements	Entity External and Internal	Security Domain Operational Profiles	Security Control Objectives
<b>Builder</b>	Business Data Model	Security Rules, Policies and Procedures	Security Implementation	Items, Applications and Related Services	Network and Network Interactions	Control Structure Elements
<b>Tradesman</b>	Distinct Data Structures	Security Services	Security Products and Tools	Personnel, Actions and Roles	Processes, Hosts, Addresses and Protocols	Security Step and Sequencing
<b>Facilities Manager</b>	Assurance of Operational Continuity	Operational Risk Management	Security Service Management and Support	Apparition and User Management and Support	Security of Risk, Networks and Partners	Security Operations and Sustainable

### Gather, assess and analyse business requirements

- ▶ Business strategy
- ▶ Business processes and functions
- ▶ Organisational structure – personnel, geographical, partnerships
- ▶ Budgets, technical constraints, time dependencies

### Describe the business requirements

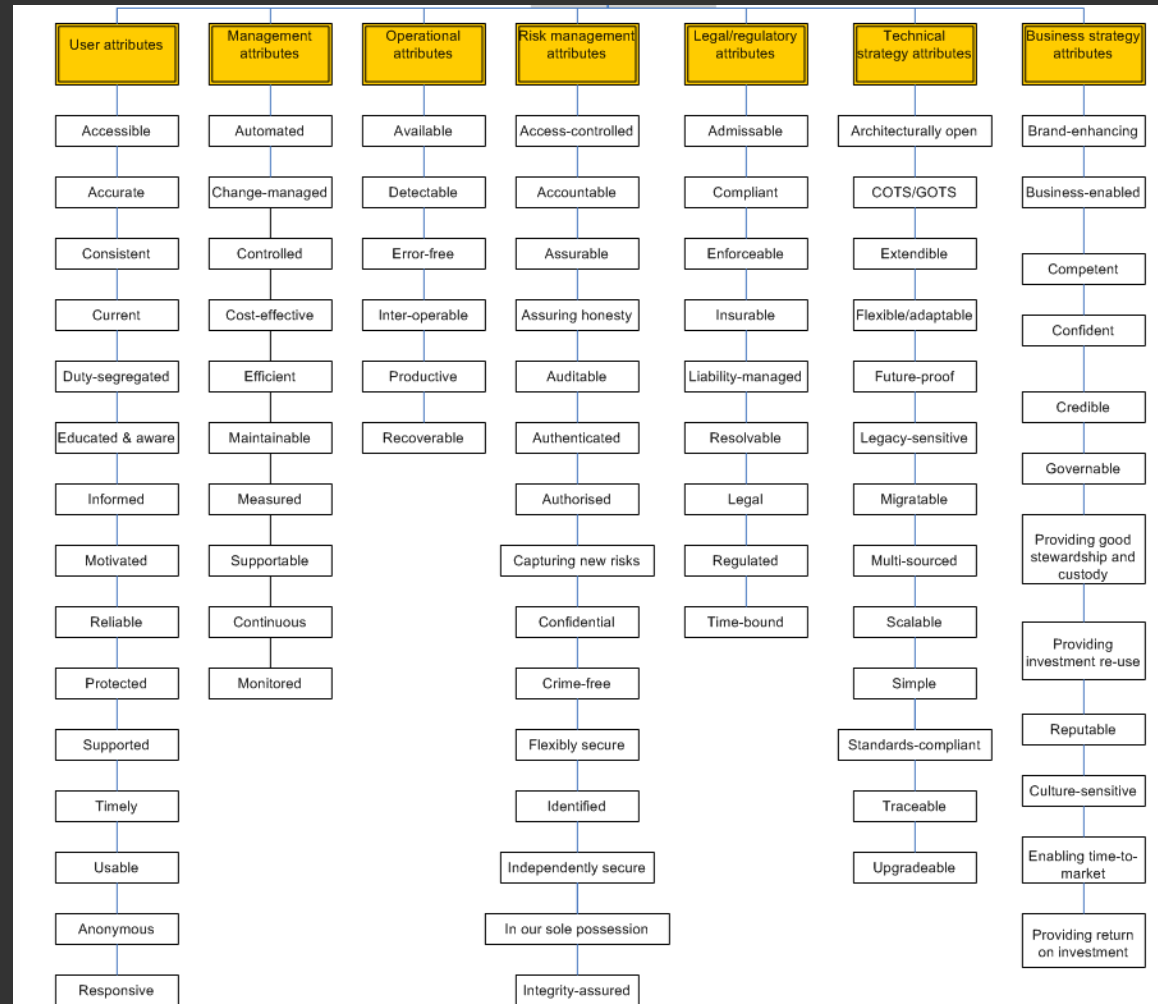

- ▶ Use the **business attributes database** to describe the business in terms of strategy, related assets, business goals and objectives → **business attribute profile**

### Analyse the business risks

- ▶ Perform a threat analysis on the business assets, goals and objectives
- ▶ Define the business impact of the realisation of the threats
- ▶ Identify technical and procedural vulnerabilities

# An overview of SABSA attributes database

	Assets (What)	Motivation (Why)	Process (How)	People (Who)	Location (Where)	Time (When)
<b>Business</b>	The Business	Business Risk Model	Business Process Model	Business Organization and Relationships	Business Geography	Business Time Dependencies
<b>Architect</b>	Business Requirements and Objectives	Business Objectives and Justification	Business Processes and Activities	Business Organization and Relationships	Business Geography	Business Time Dependencies
<b>Designer</b>	Business Data Model	Security Risks, Policies and Procedures	Security Requirements	Users, Applications and Related Services	Security Domain and Security Assets	Security Domain and Security Assets
<b>Builder</b>	Business Data Model	Security Risks, Policies and Procedures	Security Requirements	Users, Applications and Related Services	Security Domain and Security Assets	Security Domain and Security Assets
<b>Tradesman</b>	Business Data Model	Security Risks, Policies and Procedures	Security Requirements	Users, Applications and Related Services	Security Domain and Security Assets	Security Domain and Security Assets
<b>Facilities Manager</b>	Assurance of Operational Continuity	Operational Risk Management	Security Services and Support	Application and User Management and Support	Security of Risk, Assets, and Partners	Security, Operations, and Supportability

# A logical security architecture What does it look like?

	Assets (What)	Motivation (Why)	Process (How)	People (Who)	Location (Where)	Time (When)
Business	Business Risk Model	Business Risk Model	Business Process Model	Business Process Model	Business Process Model	Business Process Model
Architect	Business Risk Model	Business Risk Model	Business Process Model	Business Process Model	Business Process Model	Business Process Model
Designer	Business Risk Model	Business Risk Model	Business Process Model	Business Process Model	Business Process Model	Business Process Model
Builder	Business Risk Model	Business Risk Model	Business Process Model	Business Process Model	Business Process Model	Business Process Model
Tradesman	Business Risk Model	Business Risk Model	Business Process Model	Business Process Model	Business Process Model	Business Process Model
Facilities Manager	Business Risk Model	Business Risk Model	Business Process Model	Business Process Model	Business Process Model	Business Process Model

**Business Attributes Profile**

- ▶ Select business attributes (mapped to business drivers).
- ▶ Define enterprise-specific business attributes, a measurement approach, metrics and targets.

**Control objectives**

- ▶ Derive control objectives from the Business Attributes Profile and the Business Risk Model developed at the Conceptual layer.

**Security strategies**

- ▶ Define appropriate security strategies based on the business process model, the Business Attributes profile, the control objectives and the assessment of the current state of security

**Security services**

- ▶ Layered model of security services, including:
  - ▶ Prevention
  - ▶ Containment
  - ▶ Detection and notification
  - ▶ Event collection and tracking
  - ▶ Recovery
  - ▶ Assurance

# A worked example Business drivers

	Assets (What)	Motivation (Why)	Process (How)	People (Who)	Location (Where)	Time (When)
<b>Business</b>	The Business	Business Goals	Business Processes	Business Operations and Personnel	Business Locations	Business Time
<b>Architect</b>	Business Architecture	Business Objectives	Security Strategy and Architecture	Security Policy and Standards	Security Controls and Mechanisms	Security Requirements and Deliverables
<b>Designer</b>	Business Processes	Security Objectives	Security Processes and Procedures	Security Roles and Responsibilities	Security Controls and Mechanisms	Security Requirements and Deliverables
<b>Builder</b>	Business Data	Security Policies and Procedures	Security Mechanisms	Security Roles and Responsibilities	Security Controls and Mechanisms	Security Requirements and Deliverables
<b>Tradesman</b>	Business Data	Security Policies and Procedures	Security Mechanisms	Security Roles and Responsibilities	Security Controls and Mechanisms	Security Requirements and Deliverables
<b>Facilities Manager</b>	Business Data	Security Policies and Procedures	Security Mechanisms	Security Roles and Responsibilities	Security Controls and Mechanisms	Security Requirements and Deliverables

**Business driver**

**Business attributes**

**Threats**

**Protect customer information**

Prioritised

- ▶ Customer data is disclosed to internal users through inappropriate access controls
- ▶ Staff leak customer information to unauthorised third parties
- ▶ Customer information is disclosed in transit to third-party processor.
- ▶ Sensitive\* customer data is disclosed to unauthorised parties

# A worked example Control objectives

	Assets (What)	Motivation (Why)	Process (How)	People (Who)	Location (Where)	Time (When)
<b>Business</b>	The Business	Business Objectives	Business Processes	Business Operations	Business Locations	Business Time
<b>Architect</b>	Business Attributes Profile	Control Objectives	Security Strategy and Architecture	Security Policy and Standards	Security Control Framework	Security Requirements
<b>Designer</b>	Business Objectives	Security Objectives	Security Processes	Security Roles and Responsibilities	Security Control Framework	Security Requirements
<b>Builder</b>	Business Data Model	Security Policies and Procedures	Security Mechanisms	Security Applications and Tools	Security Control Framework	Security Requirements
<b>Tradesman</b>	Business Data	Security Policies and Procedures	Security Mechanisms	Security Applications and Tools	Security Control Framework	Security Requirements
<b>Facilities Manager</b>	Business of Operations	Operational Management	Security Service and Support	Applications and Tools	Security Control Framework	Security Requirements

## Control Objectives: Protect customer information Business attributes – Compliant, access-controlled and protected

### Operations, process and procedures

- ▶ User access management
- ▶ Monitoring user access levels and user activity, particularly third parties
- ▶ Incident response for data breach

### People

- ▶ Training and awareness for all staff on data protection
- ▶ Focussed training for high-risk areas, e.g., call centres

**Compliant  
Access-  
controlled  
Protected**

### Technology

- ▶ Identity management
- ▶ Authentication and authorisation
- ▶ Database and network encryption to protect personal data in storage and in transit
- ▶ Auditing and logging of access to sensitive\* personal data

### Governance

- ▶ Nominated Data Protection Officer
- ▶ Data protection policies, standards and procedures
- ▶ Third party risk management framework
- ▶ Data protection assurance

# A worked example

## Security services

### Technical security services

- ▶ Identity management tools
- ▶ Authentication
- ▶ Access control
- ▶ Authorisation
- ▶ Auditing
- ▶ Storage encryption
- ▶ Link encryption
- ▶ Breach

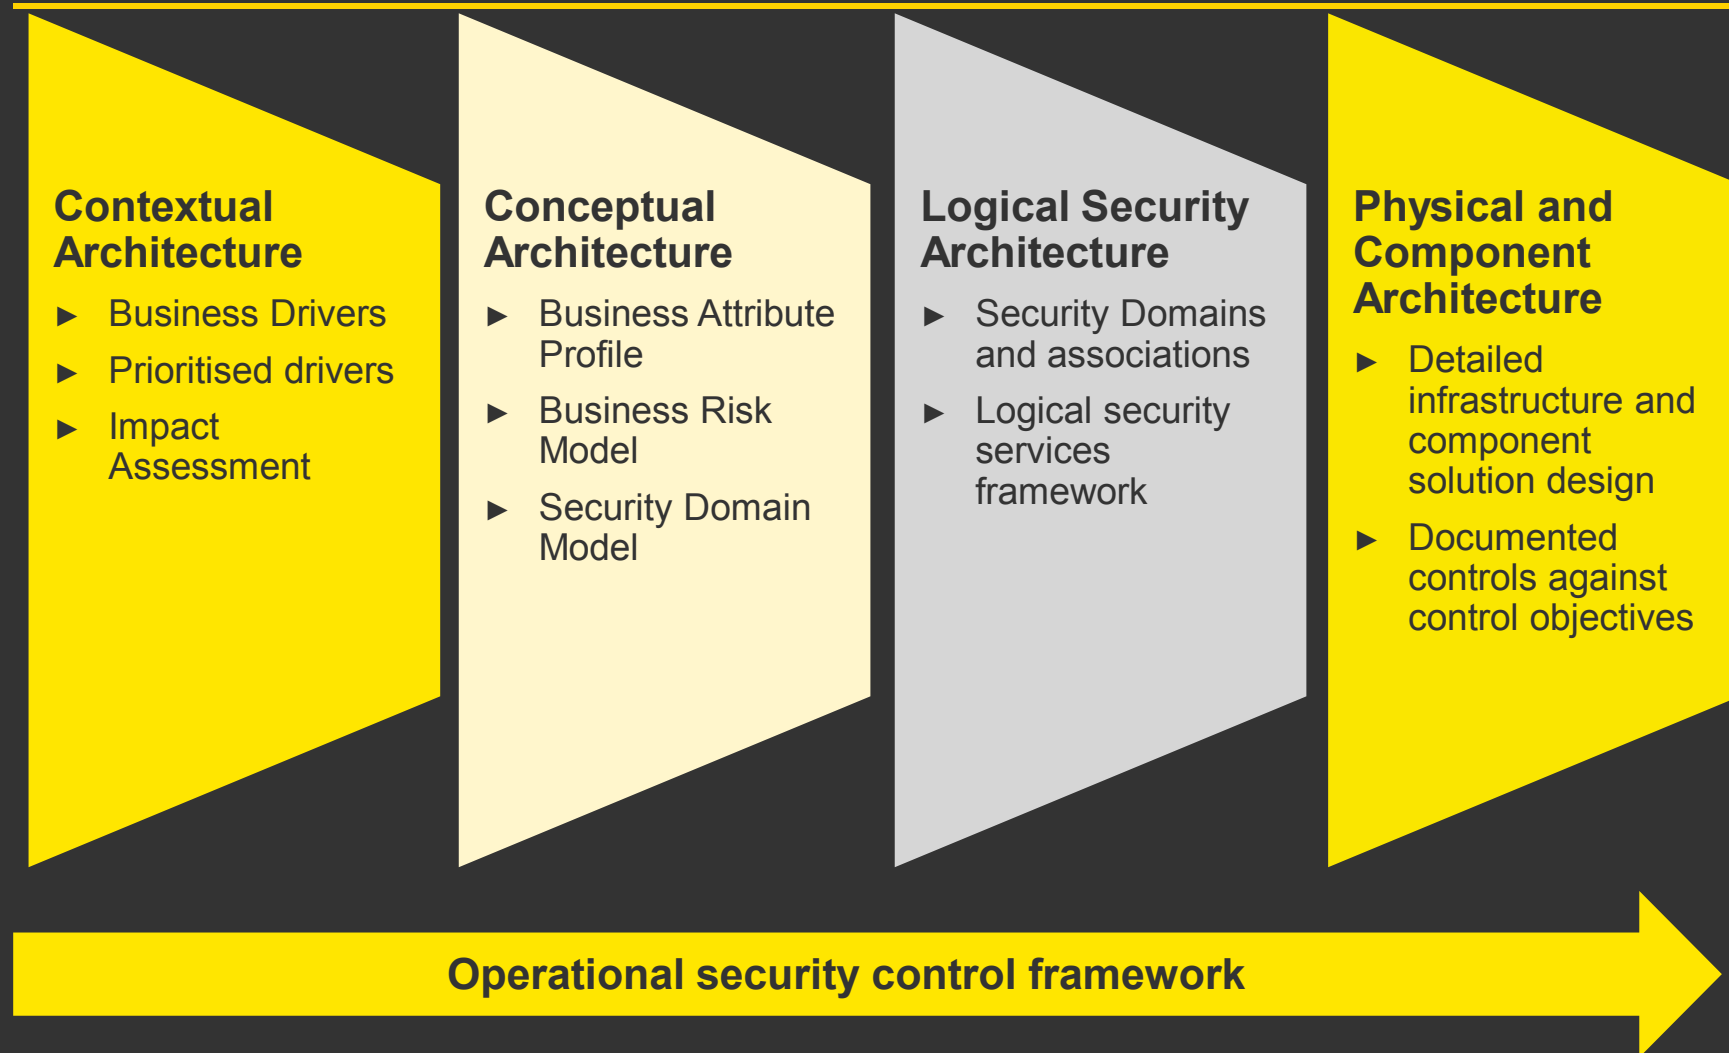

### Technical security services

- ▶ Security management
- ▶ Incident management
- ▶ Policies, standards, procedures, guidelines
- ▶ Training and awareness
- ▶ Proactive reviews
- ▶ Third party management frameworks

# Security architecture deliverables

## What do you get?

# Portrait of a successful security architect

---

An architect's skill-set is different from a tradesman

Understands the business strategy and objectives

- ▶ There are more than just 'security' requirements

Thinks in business terms at all times

- ▶ Why are we doing this?
- ▶ What are we trying to do?

Has good communication skills

- ▶ Bridges the gaps between business and technology

Maintains strength of character

- ▶ Defends the security architecture
- ▶ Meets the constant challenge

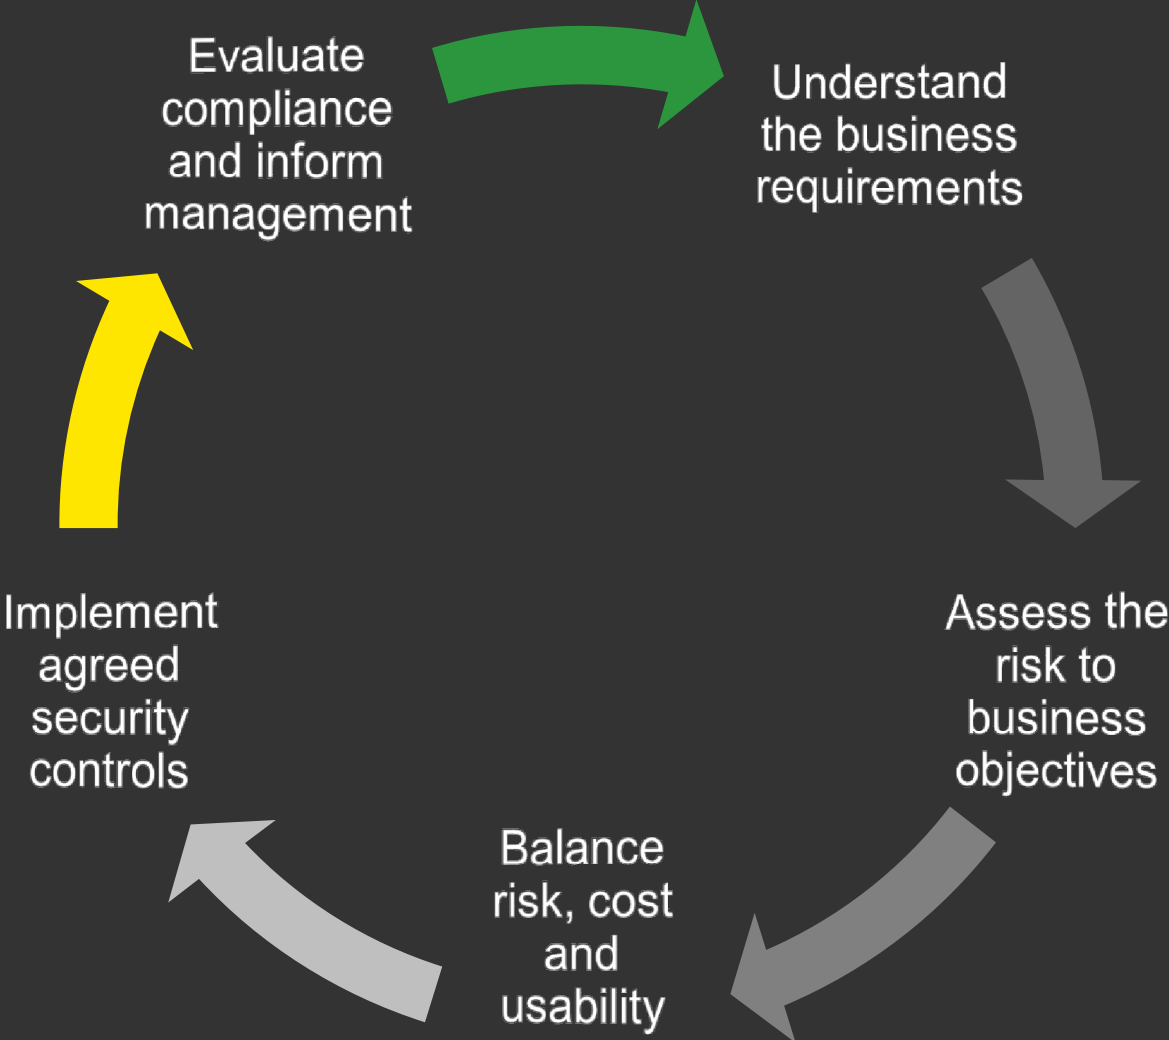

# Optimising your investment in security architecture – measuring success

- ▶ Characteristics of a good business security architecture
- ▶ Strategic alignment: aligned to the current business strategy
- ▶ Agility: designing a security architecture to deal with the changing legal, regulatory and client requirements
- ▶ Extensibility: expanding the architecture on a phased basis throughout an organisation
- ▶ Robustness: demonstrates a thorough development with appropriate input, review and approval and will withstand critical evaluation from detractors
- ▶ Pragmatism: reflects the operating environment of the organisation and imposes appropriate security controls for the people and culture.
