

HOME TASKS

1. Write a C++ code to store the information of 10 students in structure and display it. The information should include student's name, roll no. and marks obtained which is user defined. Your output should look like

```
Enter information of students:
```

```
For roll number1,
```

```
Enter name: Tom
```

```
Enter marks: 98
```

2. Write a C++ to enter the information of two distances (*inches and feet*), add and display the sum using structure. Also change inches into feet if exceed 12.
